### 5.57 `__gnu_parallel::__unary_negate< _Predicate, argument_type >` Class Template Reference

```

#include <base.h>

```

Inheritance diagram for `__gnu_parallel::__unary_negate< _Predicate, argument_type >`:

#### Public Types

- typedef `argument_type` `argument_type`
- typedef `bool` `result_type`

### Public Member Functions

- `__unary_negate` (const `_Predicate` &\_\_x)
- `bool operator()` (const `argument_type` &\_\_x)

### Protected Attributes

- `_Predicate _M_pred`

#### 5.57.1 Detailed Description

```
template<typename _Predicate, typename argument\_type>
class __gnu_parallel::__unary_negate<_Predicate, argument\_type>
```

Similar to `std::unary_negate`, but giving the argument types explicitly.

#### 5.57.2 Member Typedef Documentation

##### `argument_type`

```
typedef argument\_type std::unary_function< argument\_type, bool >::argument_type [inherited]
argument\_type is the type of the argument
```

##### `result_type`

```
typedef bool std::unary_function< argument\_type, bool >::result_type [inherited]
result\_type is the return type
```

The documentation for this class was generated from the following file:

- [base.h](#)

## 5.58 `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>` Class Template Reference

```
#include <vstring.h>
```

### Public Types

- typedef `_Alloc` `allocator_type`
- typedef `__gnu_cxx::__normal_iterator< const_pointer, \_\_versa\_string>` `const_iterator`
- typedef `_CharT_alloc_traits::const_pointer` `const_pointer`
- typedef `const value_type &` `const_reference`
- typedef `std::reverse\_iterator< const\_iterator >` `const_reverse_iterator`
- typedef `_CharT_alloc_type::difference_type` `difference_type`
- typedef `__gnu_cxx::__normal_iterator< pointer, \_\_versa\_string>` `iterator`
- typedef `_CharT_alloc_traits::pointer` `pointer`
- typedef `value_type &` `reference`
- typedef `std::reverse\_iterator< iterator >` `reverse_iterator`
- typedef `_CharT_alloc_type::size_type` `size_type`
- typedef `_Traits` `traits_type`
- typedef `_Traits::char_type` `value_type`

### 5.58.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base>
class __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >
```

Template class `__versa_string`.

Data structure managing sequences of characters and character-like objects.

### 5.58.2 Constructor & Destructor Documentation

#### `__versa_string()` [1/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const _Alloc & __a = _Alloc()) [inline], [explicit], [noexcept]
```

Construct an empty string using allocator *a*.

Referenced by `compare()`, `compare()`, and `__gnu_cxx::__versa_string< char >::substr()`.

#### `__versa_string()` [2/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Construct string with copy of value of `__str`.

##### Parameters

<code>__str</code>	Source string.
--------------------	----------------

#### `__versa_string()` [3/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    __versa_string< _CharT, _Traits, _Alloc, _Base > && __str) [inline], [noexcept]
```

String move constructor.

##### Parameters

<code>__str</code>	Source string.
--------------------	----------------

The newly-constructed string contains the exact contents of `__str`. The contents of `__str` are a valid, but unspecified string.

#### `__versa_string()` [4/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    std::initializer_list< _CharT > __l,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string from an initializer list.

##### Parameters

<code>__l</code>	<code>std::initializer_list</code> of characters.
<code>__a</code>	Allocator to use (default is default allocator).

**\_\_versa\_string()** [5/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos,
    size_type __n = npos) [inline]
```

Construct string as copy of a substring.

**Parameters**

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy (default remainder).

**\_\_versa\_string()** [6/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos,
    size_type __n,
    const _Alloc & __a) [inline]
```

Construct string as copy of a substring.

**Parameters**

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use.

**\_\_versa\_string()** [7/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const _CharT * __s,
    size_type __n,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string initialized by a character array.

**Parameters**

<code>__s</code>	Source character array.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use (default is default allocator).

---

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

#### `__versa_string()` [8/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const _CharT * __s,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string as copy of a C string.

##### Parameters

<code>↵ __s</code>	Source C string.
<code>↵ __a</code>	Allocator to use (default is default allocator).

#### `__versa_string()` [9/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    size_type __n,
    _CharT __c,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string as multiple characters.

##### Parameters

<code>↵ __n</code>	Number of characters.
<code>↵ __c</code>	Character to use.
<code>↵ __a</code>	Allocator to use (default is default allocator).

#### `__versa_string()` [10/10]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    _InputIterator __beg,
    _InputIterator __end,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string as copy of a range.

## Parameters

<code>__beg</code>	Start of range.
<code>__end</code>	End of range.
<code>__a</code>	Allocator to use (default is default allocator).

`~__versa_string()`

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::~__versa_string () [inline], [noexcept]
Destroy the string instance.
```

## 5.58.3 Member Function Documentation

`append()` [1/7]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    _InputIterator __first,
    _InputIterator __last) [inline]
Append a range of characters.
```

## Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

## Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

`append()` [2/7]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
Append a string to this string.
```

## Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

## Returns

Reference to this string.

Referenced by `__gnu_cxx::__versa_string< char >::append()`, `std::getline()`, `__gnu_cxx::operator+()`, `__gnu_cxx::operator+()`, `__gnu_cxx::operator+()`, `__gnu_cxx::__versa_string< char >::operator+=(())`, `__gnu_cxx::__versa_string< char >::operator+=(())`, `__gnu_cxx::__versa_string< char >::operator+=(())`, and `resize()`.

**append()** [3/7]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (
    const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str,
    size_type __pos,
    size_type __n) [inline]
```

Append a substring.

**Parameters**

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

**append()** [4/7]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (
    const _CharT * __s) [inline]
```

Append a C string.

**Parameters**

<code>__s</code>	The C string to append.
------------------	-------------------------

**Returns**

Reference to this string.

**append()** [5/7]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (
    const _CharT * __s,
    size_type __n) [inline]
```

Append a C substring.

**Parameters**

<a href="#"></a> <a href="#"></a> <code>_s</code>	The C string to append.
<a href="#"></a> <a href="#"></a> <code>_n</code>	The number of characters to append.

**Returns**

Reference to this string.

**append() [6/7]**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    size_type __n,
    _CharT __c) [inline]
```

Append multiple characters.

**Parameters**

<a href="#"></a> <a href="#"></a> <code>_n</code>	The number of characters to append.
<a href="#"></a> <a href="#"></a> <code>_c</code>	The character to use.

**Returns**

Reference to this string.

Appends n copies of c to this string.

**append() [7/7]**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    std::initializer_list< _CharT > __l) [inline]
```

Append an initializer\_list of characters.

**Parameters**

<a href="#"></a> <a href="#"></a> <a href="#"></a> <a href="#"></a> <a href="#"></a> <code>l</code>	The initializer_list of characters to append.
---	---

**Returns**

Reference to this string.

**assign()** [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (
    __versa_string<_CharT, _Traits, _Alloc, _Base> && __str) [inline], [noexcept]
```

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

**assign()** [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (
    _InputIterator __first,
    _InputIterator __last) [inline]
```

Set value to a range of characters.

**Parameters**

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

**Returns**

Reference to this string.

Sets value of string to characters in the range `[first,last)`.

**assign()** [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (
    const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str) [inline]
```

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

Referenced by `__gnu_cxx::__versa_string<char>::assign()`, `__gnu_cxx::__versa_string<char>::operator=()`, `__gnu_cxx::__versa_string<char>::operator=()`, `__gnu_cxx::__versa_string<char>::operator=()`, and `__gnu_cxx::__versa_string<char>::operator=()`.

**assign()** [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos,
    size_type __n) [inline]
```

Set value to a substring of a string.

**Parameters**

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

**assign()** [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    const _CharT * __s) [inline]
```

Set value to contents of a C string.

**Parameters**

<code>__s</code>	The C string to use.
------------------	----------------------

**Returns**

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

**assign()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    const _CharT * __s,
    size_type __n) [inline]
```

Set value to a C substring.

## Parameters

<code>__s</code>	The C string to use.
<code>__n</code>	Number of characters to use.

## Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

**assign()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
    size_type __n,
    _CharT __c) [inline]
```

Set value to multiple characters.

## Parameters

<code>__n</code>	Length of the resulting string.
<code>__c</code>	The character to use.

## Returns

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

**assign()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
    std::initializer_list<_CharT > __l) [inline]
```

Set value to an `initializer_list` of characters.

## Parameters

<code>__l</code>	The <code>initializer_list</code> of characters to assign.
------------------	--

## Returns

Reference to this string.

**at()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (
    size_type __n) [inline]
```

Provides access to the data contained in the string.

**Parameters**

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

**Returns**

Read/write reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

**at()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (
    size_type __n) const [inline]
```

Provides access to the data contained in the string.

**Parameters**

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

**Returns**

Read-only (const) reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**back()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back () const [inline],
[noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

**back()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
reference \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::back \(\) [inline], [noexcept]
```

Returns a read/write reference to the data at the last element of the string.

**begin()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
const_iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::begin \(\) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

**begin()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::begin \(\) [inline], [noexcept]
```

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::crend\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::rend\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::rend\(\)](#).

**c\_str()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
const _CharT * \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::c\_str \(\) const [inline],
[noexcept]
```

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

**capacity()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
size_type \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::capacity \(\) const [inline],
[noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::push\\_back\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::shrink\\_to\\_fit\(\)](#).

**cbegin()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
const_iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::cbegin \(\) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

**cend()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
const_iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::cend \(\) const [inline],
[noexcept]
```

```
void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::clear () [inline], [noexcept]
```

```
int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare (
```

Compare to a string.

Referenced by [gnu cxx::operator<\(\)](#), [gnu cxx::operator<\(\)](#), [gnu cxx::operator<\(\)](#), [gnu cxx::operator<=\(\)](#).

```
int    gnu_cxx::  versa_string< CharT, Traits, Alloc, Base >::compare (
```

Compare to a C string.

References [std::min\(\)](#), and [size\(\)](#).

**compare()** [3/6]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos,
    size_type __n,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) const
```

Compare substring to a string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `__versa_string()`, `data()`, `std::min()`, and `size()`.

**compare()** [4/6]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) const
```

Compare substring to a C string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::min()`.

**compare()** [5/6]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) const
```

Compare substring against a character array.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of s.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(), __s, rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `__s` must have at least `n2` characters, `\0` has no special meaning.

References [std::min\(\)](#).

**compare()** [6/6]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos1,
    size_type __n1,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos2,
    size_type __n2) const
```

Compare substring to a substring.

**Parameters**

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(), str.substr(pos2, n2).data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `__versa_string()`, `data()`, and `std::min()`.

**copy()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string<_CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string<_CharT, ↵
_Traits, _Alloc, _Base>::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0) const
```

Copy substring into C string.

**Parameters**

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

**Returns**

Number of characters actually copied

**Exceptions**

<code>std::out_of_range</code>	If <code>pos &gt; size()</code> .
--------------------------------	-----------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

**crbegin()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reverse_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::crbegin ()
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

**crend()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crend ()
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

### data()

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const _CharT * __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data () const [inline],
[noexcept]
```

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Referenced by [compare\(\)](#), [compare\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::compare\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::find\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::find\\_first\\_not\\_of\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::find\\_first\\_of\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::operator==\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::operator==\(\)](#).

### empty()

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
bool __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::empty () const [inline], [nodiscard],
[noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

### end() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end () const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

### end() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end () [inline], [noexcept]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::cbegin\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::rbegin\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::rbegin\(\)](#).

### erase() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (
    const_iterator __first,
    const_iterator __last) [inline]
```

Remove a range of characters.

#### Parameters

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

---

**Returns**

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (
    const_iterator __position) [inline]
```

Remove one character.

**Parameters**

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

**Returns**

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (
    size_type __pos = 0,
    size_type __n = npos) [inline]
```

Remove characters.

**Parameters**

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.
--------------------------------	---

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are `< __n` characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by [std::getline\(\)](#).

**find()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find (
    _CharT __c,
    size_type __pos = 0) const [noexcept]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [size\(\)](#).

**find()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const
```

Find position of a C substring.

## Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to search for.

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [npos](#), and [size\(\)](#).

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::find\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::find\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<](#)

**find()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find (
    const _CharT * __s,
    size_type __pos = 0) const [inline]
```

Find position of a C string.

## Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find\_first\_not\_of()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string<_CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string<_CharT, ↵
_Traits, _Alloc, _Base>::find_first_not_of (
    _CharT __c,
    size_type __pos = 0) const [noexcept]
```

Find position of a different character.

## Parameters

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [size\(\)](#).

**find\_first\_not\_of() [2/4]**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::find\\_first\\_not\\_of\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::find\\_first\\_not\\_of\(\)](#).

**find\_first\_not\_of() [3/4]**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const
```

Find position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [size\(\)](#).

**find\_first\_not\_of()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline]
```

Find position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of (
    _CharT __c,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(c, pos)`.

**find\_first\_of()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
--------------------	---

<code>__pos</code>	Index of character to search from (default 0).
--------------------	--

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::find\\_first\\_of\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::find\\_first\\_of\(\)](#).

#### **find\_first\_of()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const
```

Find position of a character of C substring.

#### Parameters

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from s to search for.

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [size\(\)](#).

#### **find\_first\_of()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline]
```

Find position of a character of C string.

#### Parameters

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_last_not_of (
    _CharT __c,
    size_type __pos = npos) const [noexcept]
```

Find last position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [size\(\)](#).

**find\_last\_not\_of()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::find\\_last\\_not\\_of\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::find\\_last\\_not\\_of\(\)](#).

**find\_last\_not\_of()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const
```

Find last position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [size\(\)](#).

**find\_last\_not\_of()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline]
```

Find last position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
    _CharT __c,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(c, pos)`.

**find\_last\_of()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by `__gnu_cxx::__versa_string< char >::find_last_of()`, and `__gnu_cxx::__versa_string< char >::find_last_of()`.

**find\_last\_of()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const
```

Find last position of a character of C substring.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References `npos`, and `size()`.

**find\_last\_of()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline]
```

Find last position of a character of C string.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**front()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front () const [inline],
[noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

**front()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front () [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the string.

**get\_allocator()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
allocator_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::get_allocator ()
const [inline], [noexcept]
```

Return copy of allocator used to construct this string.

**insert()** [1/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    _CharT __c) [inline]
```

Insert one character.

**Parameters**

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [2/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    _InputIterator __beg,
    _InputIterator __end) [inline]
```

Insert a range of characters.

**Parameters**

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [3/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    size_type __n,
    _CharT __c) [inline]
```

Insert multiple characters.

**Parameters**

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert

<a href="#"></a>	The character to insert.
<a href="#"></a> <code>_c</code>	

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown. Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::insert\(\)](#).

**insert()** [4/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    std::initializer_list< _CharT > __l) [inline]
```

Insert an initializer\_list of characters.

**Parameters**

<a href="#"></a> <code>__p</code>	Const_iterator referencing location in string to insert at.
<a href="#"></a> <code>__l</code>	The initializer_list of characters to insert.

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

**insert()** [5/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos,
    const _CharT * __s) [inline]
```

Insert a C string.

## Parameters

<code>__pos</code>	Iterator referencing location in string to insert at.
<code>__s</code>	The C string to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [6/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos,
    const _CharT * __s,
    size_type __n) [inline]
```

Insert a C substring.

## Parameters

<code>__pos</code>	Iterator referencing location in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [7/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos,
    size_type __n,
    _CharT __c) [inline]
```

Insert multiple characters.

**Parameters**

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [8/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos1,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Insert value of a string.

**Parameters**

<code>__pos1</code>	Iterator referencing location in string to insert at.
<code>__str</code>	The string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [9/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos1,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos2,
    size_type __n) [inline]
```

Insert a substring.

**Parameters**

<code>__pos1</code>	Iterator referencing location in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in str to insert.
<code>__n</code>	Number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> .

Starting at `__pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**length()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::length () const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

**max\_size()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size () const [inline],
[noexcept]
```

Returns the `size()` of the largest possible string.

Referenced by [std::getline\(\)](#).

**operator+=()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (  
    _CharT __c)    [inline]
```

Append a character.

## Parameters

<code>_↵</code>	The character to append.
<code>_C</code>	

## Returns

Reference to this string.

**operator+=()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Append a string to this string.

## Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

## Returns

Reference to this string.

**operator+=()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
    const _CharT * __s) [inline]
```

Append a C string.

## Parameters

<code>_↵</code>	The C string to append.
<code>_S</code>	

## Returns

Reference to this string.

**operator+=()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
    std::initializer_list< _CharT > __l) [inline]
```

Append an `initializer_list` of characters.

**Parameters**

↩	The initializer_list of characters to be appended.
↩	
↩	
↩	
/	

**Returns**

Reference to this string.

**operator=()** [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
    __versa_string< _CharT, _Traits, _Alloc, _Base > && __str) [inline], [noexcept]
```

String move assignment operator.

**Parameters**

__str	Source string.
-------	----------------

The contents of \_\_str are moved into this string (without copying). \_\_str is a valid, but unspecified string.

**operator=()** [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
    _CharT __c) [inline]
```

Set value to string of length 1.

**Parameters**

↩	Source character.
_c	

Assigning to a character makes this string length 1 and (\*this)[0] == \_\_c.

**operator=()** [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Assign the value of str to this string.

**Parameters**

__str	Source string.
-------	----------------

**operator=()** [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator= (
    const _CharT * __s) [inline]
```

Copy contents of `__s` into this string.

**Parameters**

<code>__s</code>	Source null-terminated string.
------------------	--------------------------------

**operator=()** [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator= (
    std::initializer_list<_CharT> __l) [inline]
```

Set value to string constructed from initializer list.

**Parameters**

<code>std::initializer_list</code>	
------------------------------------	--

**operator[]()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator[] (
    size_type __pos) const [inline], [noexcept]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Referenced by `__gnu_cxx::__versa_string<char>::back()`, `__gnu_cxx::__versa_string<char>::back()`, `__gnu_cxx::__versa_string<char>::front()` and `__gnu_cxx::__versa_string<char>::front()`.

**operator[]()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
reference \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::operator[] (
    size_type __pos) [inline], [noexcept]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

**pop\_back()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::pop_back () [inline]
```

Remove the last character.

The string must be non-empty.

**push\_back()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::push_back (
    _CharT __c) [inline]
```

Append a single character.

**Parameters**

<code>__c</code>	Character to append.
------------------	----------------------

Referenced by [\\_\\_gnu\\_cxx::operator+\(\)](#), [\\_\\_gnu\\_cxx::operator+\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::operator+=\(\(\)\)](#).

**rbegin()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reverse_iterator \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::rbegin ()
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

**rbegin()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
reverse_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rbegin () [inline],
[noexcept]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

#### **rend()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
const_reverse_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rend () const
[inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

#### **rend()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
reverse_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rend () [inline],
[noexcept]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

#### **replace()** [1/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
```

```
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace (
    const_iterator __i1,
    const_iterator __i2,
    _InputIterator __k1,
    _InputIterator __k2) [inline]
```

Replace range of characters with range.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [2/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Replace range of characters with string.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [3/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const _CharT * __s) [inline]
```

Replace range of characters with C string.

**Parameters**

<code>↔ __i1</code>	Iterator referencing start of range to replace.
<code>↔ __i2</code>	Iterator referencing end of range to replace.
<code>↔ __s</code>	C string value to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [4/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const _CharT * __s,
    size_type __n) [inline]
```

Replace range of characters with C substring.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, the first `n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [5/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    size_type __n,
    _CharT __c) [inline]
```

Replace range of characters with multiple characters.

**Parameters**

<a href="#"></a> <code>__i1</code>	Iterator referencing start of range to replace.
<a href="#"></a> <code>__i2</code>	Iterator referencing end of range to replace.
<a href="#"></a> <code>__n</code>	Number of characters to insert.
<a href="#"></a> <code>__c</code>	Character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace() [6/11]**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    std::initializer_list< _CharT > __l) [inline]
```

Replace range of characters with `initializer_list`.

**Parameters**

<a href="#"></a> <code>__i1</code>	Iterator referencing start of range to replace.
<a href="#"></a> <code>__i2</code>	Iterator referencing end of range to replace.
<a href="#"></a> <code>__l</code>	The <code>initializer_list</code> of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [7/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace (
    size_type __pos,
    size_type __n,
    const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str) [inline]
```

Replace characters with value from another string.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos,pos+n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by `__gnu_cxx::__versa_string<char>::append()`, `__gnu_cxx::__versa_string<char>::assign()`, `__gnu_cxx::__versa_string<char>::insert()`, `__gnu_cxx::__versa_string<char>::insert()`, `__gnu_cxx::__versa_string<char>::insert()`, `__gnu_cxx::__versa_string<char>::insert()`, `__gnu_cxx::__versa_string<char>::insert()`, `__gnu_cxx::__versa_string<char>::replace()`, `__gnu_cxx::__versa_string<char>::replace()`, `__gnu_cxx::__versa_string<char>::replace()`, `__gnu_cxx::__versa_string<char>::replace()`, `__gnu_cxx::__versa_string<char>::replace()`, `__gnu_cxx::__versa_string<char>::replace()`, and `__gnu_cxx::__versa_string<char>::replace()`.

**replace()** [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) [inline]
```

Replace characters with value of a C string.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<i>std::out_of_range</i>	If <code>__pos &gt; size()</code> .
<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the characters of `__s` are inserted. If `pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) [inline]
```

Replace characters with value of a C substring.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>__s</code> to use.

**Returns**

Reference to this string.

**Exceptions**

<i>std::out_of_range</i>	If <code>__pos1 &gt; size()</code> .
<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    size_type __pos,
    size_type __n1,
    size_type __n2,
    _CharT __c) [inline]
```

Replace characters with multiple characters.

## Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace (
    size_type __pos1,
    size_type __n1,
    const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos2,
    size_type __n2) [inline]
```

Replace characters with value from another string.

## Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of str to use.
<code>__n2</code>	Number of characters from str to use.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos1, pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**reserve()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve (
    size_type __res_arg = 0) [inline]
```

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

**Exceptions**

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Referenced by [\\_\\_gnu\\_cxx::operator+\(\)](#), [\\_\\_gnu\\_cxx::operator+\(\)](#), [\\_\\_gnu\\_cxx::operator+\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::shrink](#)

**resize() [1/2]**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (
    size_type __n) [inline]
```

Resizes the string to the specified number of characters.

**Parameters**

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

**resize() [2/2]**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (
    size_type __n,
    _CharT __c)
```

Resizes the string to the specified number of characters.

**Parameters**

<code>__n</code>	Number of characters the string should contain.
------------------	---

<code>__c</code>	Character to fill any new elements.
------------------	-------------------------------------

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

References [append\(\)](#), and [size\(\)](#).

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::resize\(\)](#).

#### **rfind()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string<_CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string<_CharT, ↵
_Traits, _Alloc, _Base>::rfind (
    _CharT __c,
    size_type __pos = npos) const [noexcept]
```

Find last position of a character.

##### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

##### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [size\(\)](#).

#### **rfind()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind (
    const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a string.

##### Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

##### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::find\\_last\\_of\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::rfind\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<char>::rfind\(\)](#).

**rfind()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const
```

Find last position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::min\(\)](#), [npos](#), and [size\(\)](#).

**rfind()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
    const _CharT * __s,
    size_type __pos = npos) const [inline]
```

Find last position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**shrink\_to\_fit()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::shrink_to_fit () [inline],
[noexcept]
```

A non-binding request to reduce capacity() to size().

**size()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size () const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Referenced by `__gnu_cxx::__versa_string<char>::append()`, `__gnu_cxx::__versa_string<char>::append()`, `__gnu_cxx::__versa_string<char>::assign()`, `__gnu_cxx::__versa_string<char>::assign()`, `__gnu_cxx::__versa_string<char>::assign()`, `__gnu_cxx::__versa_string<char>::at()`, `__gnu_cxx::__versa_string<char>::at()`, `__gnu_cxx::__versa_string<char>::back()`, `__gnu_cxx::__versa_string<char>::back()`, `__gnu_cxx::__versa_string<char>::cend()`, `compare()`, `compare()`, `__gnu_cxx::__versa_string<char>::compare()`, `__gnu_cxx::__versa_string<char>::empty()`, `__gnu_cxx::__versa_string<char>::end()`, `__gnu_cxx::__versa_string<char>::end()`, `find()`, `find()`, `__gnu_cxx::__versa_string<char>::find_first_not_of()`, `__gnu_cxx::__versa_string<char>::find_first_not_of()`, `__gnu_cxx::__versa_string<char>::find_first_of()`, `__gnu_cxx::__versa_string<char>::find_first_of()`, `__gnu_cxx::__versa_string<char>::find_last_not_of()`, `__gnu_cxx::__versa_string<char>::find_last_not_of()`, `__gnu_cxx::__versa_string<char>::find_last_of()`, `__gnu_cxx::__versa_string<char>::find_last_of()`, `__gnu_cxx::operator+()`, `__gnu_cxx::operator+()`, `__gnu_cxx::operator+()`, `__gnu_cxx::operator+()`, `__gnu_cxx::operator+()`, `__gnu_cxx::operator==()`, `__gnu_cxx::operator==()`, `__gnu_cxx::__versa_string<char>::operator[]()`, `__gnu_cxx::__versa_string<char>::operator[]()`, `__gnu_cxx::__versa_string<char>::pop_back()`, `__gnu_cxx::__versa_string<char>::push_back()`, `__gnu_cxx::__versa_string<char>::push_back()`, `__gnu_cxx::__versa_string<char>::replace()`, `resize()`, `rfind()`, `rfind()`, and `__gnu_cxx::__versa_string<char>::shrink_to_fit()`.

**substr()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr (
    size_type __pos = 0,
    size_type __n = npos) const [inline]
```

Get a substring.

**Parameters**

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

**Returns**

The new string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos &gt; size()</code> .
--------------------------------	-----------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

**swap()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap (
    __versa_string< _CharT, _Traits, _Alloc, _Base > & __s) [inline], [noexcept]
```

Swap contents with another string.

## Parameters

<a href="#">_↔</a>	String to swap with.
<a href="#">_s</a>	

Exchanges the contents of this string with that of [\\_\\_s](#) in constant time.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::assign\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< char >::operator=\(\)](#), and [\\_\\_gnu\\_cxx::swap\(\)](#).

#### 5.58.4 Member Data Documentation

##### npos

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
const size_type \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::npos [static]
```

Value returned by various member functions when they fail.

Referenced by [find\(\)](#), [find\(\)](#), [find\\_first\\_not\\_of\(\)](#), [find\\_first\\_not\\_of\(\)](#), [find\\_first\\_of\(\)](#), [find\\_last\\_not\\_of\(\)](#), [find\\_last\\_of\(\)](#), [rfind\(\)](#), and [rfind\(\)](#).

### 5.67.1 Detailed Description

```
template<typename _TraitsT, bool __icase, bool __collate>
struct std::__detail::_BracketMatcher< _TraitsT, __icase, __collate >
```

Matches a character range (bracket expression)

The documentation for this struct was generated from the following files:

- [regex\\_compiler.h](#)
- [regex\\_compiler.tcc](#)

## 5.68 `__gnu_cxx::_Caster<_ToType>` Struct Template Reference

```
#include <cast.h>
```

### Public Types

- `typedef _ToType::element_type * type`

#### 5.68.1 Detailed Description

```
template<typename _ToType>
struct __gnu_cxx::_Caster<_ToType>
```

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a typedef `element_type` which names the type it points to. 2) has a `get()` const method which returns `element_type*`. 3) has a constructor which can take one `element_type*` argument. This type supports the semantics of the pointer cast operators (below.)

The documentation for this struct was generated from the following file:

- [cast.h](#)

## 5.69 `__gnu_cxx::_Char_types<_CharT>` Struct Template Reference

```
#include <char_traits.h>
```

### Public Types

- `typedef unsigned long int_type`
- `typedef std::streamoff off_type`
- `typedef std::streampos pos_type`
- `typedef std::mbstate_t state_type`

#### 5.69.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::_Char_types<_CharT>
```

Mapping from character type to associated types.

#### Note

This is an implementation class for the generic version of `char_traits`. It defines `int_type`, `off_type`, `pos_type`, and `state_type`. By default these are unsigned long, streamoff, streampos, and mbstate\_t. Users who need a different set of types, but who don't need to change the definitions of any function defined in `char_traits`, can specialize `__gnu_cxx::_Char_types` while leaving `__gnu_cxx::char_traits` alone.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 5.70 `__gnu_pbds::detail::pat_trie_base::_CIter<Node, Leaf, Head, Inode, Is_Forward_Iterator>` Class Template Reference

### 5.71.1 Detailed Description

```
template<typename _TraitsT>
class std::__detail::_Compiler< _TraitsT >
```

Builds an NFA from an input iterator range.

The `_TraitsT` type should fulfill requirements [28.3].

The documentation for this class was generated from the following files:

- [regex\\_compiler.h](#)
- [regex\\_compiler.tcc](#)

## 5.72 `std::__parallel::_CRandNumber< _MustBeInt >` Struct Template Reference

#### 5.73.1 Detailed Description

`template<typename _Tp, typename _Alloc>`

`class std::Deque_base<_Tp, _Alloc>`

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier. Nothing in this class ever constructs or destroys an actual `Tp` element. (Deque handles that itself.) Only/All memory management is performed here.

#### 5.73.2 Member Function Documentation

##### `_M_initialize_map()`

```
template<typename _Tp, typename _Alloc>
void std::Deque_base<_Tp, _Alloc>::_M_initialize_map (
    size_t __num_elements) [protected]
```

Layout storage.

##### Parameters

<code>__num_elements</code>	The count of <code>T</code> 's for which to allocate space at first.
-----------------------------	--

## Returns

Nothing.

The initial underlying memory layout is a bit complicated...

References [std::max\(\)](#).

The documentation for this class was generated from the following file:

### 5.74.1 Detailed Description

`template<typename _Tp, typename _Ref, typename _Ptr>  
struct std::_Deque_iterator<_Tp, _Ref, _Ptr>`

A deque::iterator.

Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

### 5.74.2 Member Function Documentation

#### `_M_set_node()`

```
template<typename _Tp, typename _Ref, typename _Ptr>
void std::_Deque_iterator<_Tp, _Ref, _Ptr>::_M_set_node (
    _Map_pointer __new_node) [inline], [noexcept]
```

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be set by the caller immediately afterwards, based on `_M_first` and `_M_last`.

The documentation for this struct was generated from the following files:

- `stl_algobase.h`
- `stl_deque.h`

## 5.75 `__gnu_parallel::__DRandomShufflingGlobalData<_RAIter>` Struct Template Reference

### 5.75.1 Detailed Description

```
template<typename _RAIter>
struct __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >
```

Data known to every thread participating in [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\(\)](#).

### 5.75.2 Constructor & Destructor Documentation

#### [\\_DRandomShufflingGlobalData\(\)](#)

```
template<typename _RAIter>
__gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_DRandomShufflingGlobalData (
    _RAIter & __source) [inline]
```

Constructor.

References [\\_M\\_source](#).

### 5.75.3 Member Data Documentation

#### [\\_M\\_bin\\_proc](#)

```
template<typename _RAIter>
__ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_bin_proc
```

Number of the thread that will further process the corresponding bin.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

#### [\\_M\\_dist](#)

```
template<typename _RAIter>
_DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_dist
```

Two-dimensional array to hold the thread-bin distribution.

Dimensions ([\\_M\\_num\\_threads](#) + 1) \_\_x ([\\_M\\_num\\_bins](#) + 1).

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

#### [\\_M\\_num\\_bins](#)

```
template<typename _RAIter>
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins
```

Number of bins to distribute to.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

### `_M_num_bits`

```
template<typename _RAIter>
```

```
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits
```

Number of bits needed to address the bins.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

### `_M_source`

```
template<typename _RAIter>
```

```
_RAIter& __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_source
```

Begin iterator of the `_source`.

Referenced by [\\_DRandomShufflingGlobalData\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

### `_M_starts`

```
template<typename _RAIter>
```

```
_DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_starts
```

Start indexes of the threads' `_chunks`.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

### `_M_temporaries`

```
template<typename _RAIter>
```

```
_ValueType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_temporaries
```

Temporary arrays for each thread.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

The documentation for this struct was generated from the following file:

- [\\_DRandomShufflingGlobalData<\\_RAIter> \\* \\_M\\_sd](#)
- [uint32\\_t \\_M\\_seed](#)

#### 5.76.1 Detailed Description

```
template<typename _RAIter, typename _RandomNumberGenerator>
```

```
struct __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >
```

Local data for a thread participating in [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\(\)](#).

#### 5.76.2 Member Data Documentation

##### `__bins_end`

```
template<typename _RAIter, typename _RandomNumberGenerator>
```

```
_BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end
```

End index for bins taken care of by this thread.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#).

### **`_M_bins_begin`**

```
template<typename _RAIter, typename _RandomNumberGenerator>
```

```
\_BinIndex \_\_gnu\_parallel::\_\_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_bins_begin
```

Begin index for bins taken care of by this thread.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

### **`_M_num_threads`**

```
template<typename _RAIter, typename _RandomNumberGenerator>
```

```
int \_\_gnu\_parallel::\_\_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_num_threads
```

Number of threads participating in total.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

### **`_M_sd`**

```
template<typename _RAIter, typename _RandomNumberGenerator>
```

```
\_DRandomShufflingGlobalData<_RAIter>* \_\_gnu\_parallel::\_\_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_sd
```

Pointer to global data.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

### **`_M_seed`**

```
template<typename _RAIter, typename _RandomNumberGenerator>
```

```
uint32_t \_\_gnu\_parallel::\_\_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_seed
```

Random `_M_seed` for this thread.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu\(\)](#).

## **5.78 `__gnu_debug::__Equal_to`< `_Type` > Class Template Reference**

```
#include <safe_sequence.h>
```

**Public Member Functions**

- `_Equal_to` (const `_Type` &\_\_v)
- bool `operator()` (const `_Type` &\_\_x) const

**5.78.1 Detailed Description**

```
template<typename _Type>
class __gnu_debug::_Equal_to<_Type >
```

A simple function object that returns true if the passed-in value is equal to the stored value.  
The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

**5.79 `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>` Class Template Reference**

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>`:

**Public Types**

- typedef `_T1` [first\\_argument\\_type](#)
- typedef bool [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

**Public Member Functions**

- `_EqualFromLess` (`_Compare` &\_\_comp)
- bool `operator()` (const `_T1` &\_\_a, const `_T2` &\_\_b)

**5.79.1 Detailed Description**

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_EqualFromLess<_T1, _T2, _Compare >
```

Constructs predicate for equality from strict weak ordering predicate.

## 5.79.2 Member Typedef Documentation

### first\_argument\_type

```
typedef _T1 std::binary\_function< _T1, _T2, bool >::first_argument_type [inherited]
```

first\_argument\_type is the type of the first argument

### result\_type

```
typedef bool std::binary\_function< _T1, _T2, bool >::result_type [inherited]
```

result\_type is the return type

### second\_argument\_type

```
typedef _T2 std::binary\_function< _T1, _T2, bool >::second_argument_type [inherited]
```

second\_argument\_type is the type of the second argument

The documentation for this class was generated from the following file:

- [base.h](#)

## 5.80 \_\_gnu\_parallel::\_EqualTo< \_T1, \_T2 > Struct Template Reference

```
#include <base.h>
```

Inheritance diagram for \_\_gnu\_parallel::\_EqualTo< \_T1, \_T2 >:

### Public Types

- typedef \_T1 [first\\_argument\\_type](#)
- typedef bool [result\\_type](#)
- typedef \_T2 [second\\_argument\\_type](#)

### Public Member Functions

- bool **operator()** (const \_T1 &\_\_t1, const \_T2 &\_\_t2) const

### 5.80.1 Detailed Description

```
template<typename _T1, typename _T2>
struct __gnu_parallel::__EqualTo< _T1, _T2 >
```

Similar to std::equal\_to, but allows two different types.

### 5.80.2 Member Typedef Documentation

#### first\_argument\_type

```
typedef _T1 std::binary_function< _T1, _T2, bool >::first_argument_type [inherited]
first_argument_type is the type of the first argument
```

#### result\_type

```
typedef bool std::binary_function< _T1, _T2, bool >::result_type [inherited]
result_type is the return type
```

#### second\_argument\_type

```
typedef _T2 std::binary_function< _T1, _T2, bool >::second_argument_type [inherited]
second_argument_type is the type of the second argument
```

The documentation for this struct was generated from the following file:

- `_Fwd_list_node_base & operator= (_Fwd_list_node_base &&__x)` `noexcept`
- `_Fwd_list_node_base & operator= (const _Fwd_list_node_base &)=delete`

## Public Attributes

- [\\_Fwd\\_list\\_node\\_base](#) \* [\\_M\\_next](#)

### 5.89.1 Detailed Description

A helper basic node class for `forward_list`.

```
This is just a linked list with nothing inside it.
There are purely list shuffling utility methods here.
```

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

## 5.90 \_\_gnu\_parallel::\_GuardedIterator<\_RAIter, \_Compare > Class Template Reference

```
#include <multiway_merge.h>
```

### Public Member Functions

- [\\_GuardedIterator](#) ([\\_RAIter](#) \_\_begin, [\\_RAIter](#) \_\_end, [\\_Compare](#) & \_\_comp)
- [operator \\_RAIter](#) () const
- [std::iterator\\_traits](#)< [\\_RAIter](#) >::value\_type & [operator\\*](#) () const
- [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > & [operator++](#) ()

### Friends

- bool [operator<](#) (const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > & \_\_bi1, const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > & \_\_bi2)
- bool [operator<=](#) (const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > & \_\_bi1, const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > & \_\_bi2)

### 5.90.1 Detailed Description

```
template<typename _RAIter, typename _Compare>
class __gnu_parallel::_GuardedIterator<_RAIter, _Compare >
```

`_Iterator` wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

The implicit supremum comes with a performance cost.

Deriving from `_RAIter` is not possible since `_RAIter` need not be a class.

### 5.90.2 Constructor & Destructor Documentation

#### `_GuardedIterator()`

```
template<typename _RAIter, typename _Compare>
__gnu_parallel::_GuardedIterator<_RAIter, _Compare >::_GuardedIterator (
    _RAIter __begin,
    _RAIter __end,
    _Compare & __comp) [inline]
```

Constructor. Sets iterator to beginning of sequence.

#### Parameters

<code>__begin</code>	Begin iterator of sequence.
<code>__end</code>	End iterator of sequence.

<code>__comp</code>	Comparator provided for associated overloaded compare operators.
---------------------	--

Referenced by [operator<](#), and [operator<=](#).

### 5.90.3 Member Function Documentation

#### **operator \_RAIter()**

```
template<typename _RAIter, typename _Compare>
__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter () const [inline]
```

Convert to wrapped iterator.

##### Returns

Wrapped iterator.

#### **operator\*()**

```
template<typename _RAIter, typename _Compare>
std::iterator_traits< _RAIter >::value_type & __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator* () const [inline]
```

Dereference operator.

##### Returns

Referenced element.

#### **operator++()**

```
template<typename _RAIter, typename _Compare>
__GuardedIterator< _RAIter, _Compare > & __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator++ () [inline]
```

Pre-increment operator.

##### Returns

This.

### 5.90.4 Friends And Related Symbol Documentation

#### **operator<**

```
template<typename _RAIter, typename _Compare>
bool operator< (
    const __GuardedIterator< _RAIter, _Compare > & __bi1,
    const __GuardedIterator< _RAIter, _Compare > & __bi2) [friend]
```

Compare two elements referenced by guarded iterators.

##### Parameters

<code>__bi1</code>	First iterator.
<code>__bi2</code>	Second iterator.

##### Returns

true if less.

References [\\_GuardedIterator\(\)](#).

**operator<=**

```
template<typename _RAIter, typename _Compare>
bool operator<= (
    const _GuardedIterator< _RAIter, _Compare > & __bi1,
    const _GuardedIterator< _RAIter, _Compare > & __bi2) [friend]
```

Compare two elements referenced by guarded iterators.

**Parameters**

<code>__bi1</code>	First iterator.
<code>__bi2</code>	Second iterator.

**Returns**

True if less equal.

References [\\_GuardedIterator\(\)](#).

The documentation for this class was generated from the following file:

### 5.92.1 Detailed Description

```
template<typename _ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >
```

Internal node type, PATRICIA tree.

The documentation for this struct was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 5.93 \_\_gnu\_cxx::\_Invalid\_type Struct Reference

```
#include <pointer.h>
```

### 5.93.1 Detailed Description

The specialization on this type helps resolve the problem of reference to void, and eliminates the need to specialize `_Pointer_adapter` for cases of `void*`, `const void*`, and so on.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

### 5.96.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory>
class __gnu_parallel::IteratorPair<_Iterator1, _Iterator2, _IteratorCategory>
```

A pair of iterators. The usual iterator operations are applied to both child iterators.

### 5.96.2 Member Typedef Documentation

**first\_type** [1/3]

```
typedef _Iterator1 std::pair<_Iterator1, _Iterator2>::first_type [inherited]
The type of the first member.
```

**first\_type** [2/3]

```
typedef _Iterator1 std::pair< _Iterator1, _Iterator2 >::first_type [inherited]
```

The type of the first member.

**first\_type** [3/3]

```
typedef _Iterator1 std::pair< _Iterator1, _Iterator2 >::first_type [inherited]
```

The type of the first member.

**second\_type** [1/3]

```
typedef _Iterator2 std::pair< _Iterator1, _Iterator2 >::second_type [inherited]
```

The type of the second member.

**second\_type** [2/3]

```
typedef _Iterator2 std::pair< _Iterator1, _Iterator2 >::second_type [inherited]
```

The type of the second member.

**second\_type** [3/3]

```
typedef _Iterator2 std::pair< _Iterator1, _Iterator2 >::second_type [inherited]
```

The type of the second member.

### 5.96.3 Member Function Documentation

**swap()** [1/4]

```
void std::pair< _Iterator1, _Iterator2 >::swap (  
    pair< _Iterator1, _Iterator2 > & __p) [inline], [constexpr], [noexcept], [inherited]
```

Swap the first members and then the second members.

**swap()** [2/4]

```
void std::pair< _Iterator1, _Iterator2 >::swap (  
    pair< _Iterator1, _Iterator2 > & __p) [inline], [constexpr], [noexcept], [inherited]
```

Swap the first members and then the second members.

**swap()** [3/4]

```
void std::pair< _Iterator1, _Iterator2 >::swap (  
    pair< _Iterator1, _Iterator2 > & __p) [inline], [constexpr], [noexcept], [inherited]
```

Swap the first members and then the second members.

**swap()** [4/4]

```
void std::pair< _Iterator1, _Iterator2 >::swap (  
    pair< _Iterator1, _Iterator2 > & __p) [inline], [constexpr], [noexcept], [inherited]
```

Swap the first members and then the second members.

### 5.96.4 Friends And Related Symbol Documentation

**operator<=>()** [1/4]

```
common_comparison_category_t< __detail::__synth3way_t< _Iterator1, _U1 >, __detail::__synth3way_t< _Iterator2, _U2 > > operator<=> (  
    __detail::__synth3way_t< _Iterator1, _U1 > & __x, __detail::__synth3way_t< _Iterator2, _U2 > & __y) (
```

```
const pair<_Iterator1, _Iterator2> & __x,
const pair<_U1, _U2> & __y) [related]
```

Defines a lexicographical order for pairs.

For two pairs of comparable types, P is ordered before Q if P.first is less than Q.first, or if P.first and Q.first are equivalent (neither is less than the other) and P.second is less than Q.second.

#### **operator<==>() [2/4]**

```
common_comparison_category_t<__detail::__synth3way_t<_Iterator1, _U1>, __detail::__synth3way_t<_Iterator2, _U2>> operator<==> (
    const pair<_Iterator1, _Iterator2> & __x,
    const pair<_U1, _U2> & __y) [related]
```

Defines a lexicographical order for pairs.

For two pairs of comparable types, P is ordered before Q if P.first is less than Q.first, or if P.first and Q.first are equivalent (neither is less than the other) and P.second is less than Q.second.

#### **operator<=>() [3/4]**

```
common_comparison_category_t<__detail::__synth3way_t<_Iterator1, _U1>, __detail::__synth3way_t<_Iterator2, _U2>> operator<=> (
    const pair<_Iterator1, _Iterator2> & __x,
    const pair<_U1, _U2> & __y) [related]
```

Defines a lexicographical order for pairs.

For two pairs of comparable types, P is ordered before Q if P.first is less than Q.first, or if P.first and Q.first are equivalent (neither is less than the other) and P.second is less than Q.second.

#### **operator<=>() [4/4]**

```
common_comparison_category_t<__detail::__synth3way_t<_Iterator1, _U1>, __detail::__synth3way_t<_Iterator2, _U2>> operator<=> (
    const pair<_Iterator1, _Iterator2> & __x,
    const pair<_U1, _U2> & __y) [related]
```

Defines a lexicographical order for pairs.

For two pairs of comparable types, P is ordered before Q if P.first is less than Q.first, or if P.first and Q.first are equivalent (neither is less than the other) and P.second is less than Q.second.

#### **operator==( ) [1/4]**

```
bool operator==(
    const pair<_Iterator1, _Iterator2> & __x,
    const pair<_U1, _U2> & __y) [related]
```

Two pairs are equal iff their members are equal.

#### **operator==( ) [2/4]**

```
bool operator==(
    const pair<_Iterator1, _Iterator2> & __x,
    const pair<_U1, _U2> & __y) [related]
```

Two pairs are equal iff their members are equal.

#### **operator==( ) [3/4]**

```
bool operator==(
    const pair<_Iterator1, _Iterator2> & __x,
    const pair<_U1, _U2> & __y) [related]
```

Two pairs are equal iff their members are equal.

#### **operator==()** [4/4]

```
bool operator== (
    const pair< _Iterator1, _Iterator2 > & __x,
    const pair< _U1, _U2 > & __y) [related]
```

Two pairs are equal iff their members are equal.

#### **swap()** [1/4]

```
enable_if< __and< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >::value >::type
swap (
    pair< _Iterator1, _Iterator2 > & __x,
    pair< _Iterator1, _Iterator2 > & __y) [related]
```

Swap overload for pairs. Calls std::pair::swap().

#### **Note**

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see <https://gcc.gnu.org/PR38466>

#### **swap()** [2/4]

```
enable_if< __and< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >::value >::type
swap (
    pair< _Iterator1, _Iterator2 > & __x,
    pair< _Iterator1, _Iterator2 > & __y) [related]
```

Swap overload for pairs. Calls std::pair::swap().

#### **Note**

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see <https://gcc.gnu.org/PR38466>

#### **swap()** [3/4]

```
enable_if< __and< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >::value >::type
swap (
    pair< _Iterator1, _Iterator2 > & __x,
    pair< _Iterator1, _Iterator2 > & __y) [related]
```

Swap overload for pairs. Calls std::pair::swap().

#### **Note**

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see <https://gcc.gnu.org/PR38466>

#### **swap()** [4/4]

```
enable_if< __and< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >::value >::type
swap (
    pair< _Iterator1, _Iterator2 > & __x,
    pair< _Iterator1, _Iterator2 > & __y) [related]
```

Swap overload for pairs. Calls std::pair::swap().

## Note

This `std::swap` overload is not declared in C++03 mode, which has performance implications, e.g. see <https://gcc.gnu.org/PR38466>

## 5.96.5 Member Data Documentation

**first** [1/4]

`_Iterator1 std::pair<_Iterator1, _Iterator2>::first` [inherited]

The first member.

**first** [2/4]

`_Iterator1 std::pair<_Iterator1, _Iterator2>::first` [inherited]

The first member.

**first** [3/4]

`_Iterator1 std::pair<_Iterator1, _Iterator2>::first` [inherited]

The first member.

**first** [4/4]

`_Iterator1 std::pair<_Iterator1, _Iterator2>::first` [inherited]

The first member.

**second** [1/4]

`_Iterator2 std::pair<_Iterator1, _Iterator2>::second` [inherited]

The second member.

**second** [2/4]

`_Iterator2 std::pair<_Iterator1, _Iterator2>::second` [inherited]

The second member.

**second** [3/4]

`_Iterator2 std::pair<_Iterator1, _Iterator2>::second` [inherited]

The second member.

**second** [4/4]

`_Iterator2 std::pair<_Iterator1, _Iterator2>::second` [inherited]

The second member.

The documentation for this class was generated from the following file:

- [iterator.h](#)

5.97 `__gnu_parallel::IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>` Class Template Reference

```
#include <iterator.h>
```

## Public Types

- [\\_Iterator3](#) **\_M\_third**

### 5.97.1 Detailed Description

```
template<typename \_Iterator1, typename \_Iterator2, typename \_Iterator3, typename \_IteratorCategory>
class \_\_gnu\_parallel::\_IteratorTriple< \_Iterator1, \_Iterator2, \_Iterator3, \_IteratorCategory >
```

A triple of iterators. The usual iterator operations are applied to all three child iterators.  
The documentation for this class was generated from the following file:

- [iterator.h](#)

## 5.98 [\\_\\_gnu\\_parallel::\\_Job](#)< [\\_DifferenceTp](#) > Struct Template Reference

```
#include <workstealing.h>
```

## Public Types

- typedef [\\_DifferenceTp](#) **\_DifferenceType**

## Public Attributes

- volatile [\\_DifferenceType](#) [\\_M\\_first](#)
- volatile [\\_DifferenceType](#) [\\_M\\_last](#)
- volatile [\\_DifferenceType](#) [\\_M\\_load](#)

### 5.98.1 Detailed Description

```
template<typename \_DifferenceTp>
struct \_\_gnu\_parallel::\_Job< \_DifferenceTp >
```

One [\\_\\_job](#) for a certain thread.

### 5.98.2 Member Data Documentation

#### **\_M\_first**

```
template<typename _DifferenceTp>
```

```
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_first
```

First element.

Changed by owning and stealing thread. By stealing thread, always incremented.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_for\\_each\\_template\\_random\\_access\\_workstealing\(\)](#).

#### **\_M\_last**

```
template<typename _DifferenceTp>
```

```
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_last
```

Last element.

Changed by owning thread only.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_for\\_each\\_template\\_random\\_access\\_workstealing\(\)](#).

#### **\_M\_load**

```
template<typename _DifferenceTp>
```

```
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_load
```

Number of elements, i.e. `_M_last - _M_first + 1`.

Changed by owning thread only.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_for\\_each\\_template\\_random\\_access\\_workstealing\(\)](#).

The documentation for this struct was generated from the following file:

- [workstealing.h](#)

## 5.99 \_\_gnu\_pbds::detail::pat\_trie\_base::\_Leaf<\_ATraits, Metadata > Struct Template Reference

```
#include <pat_trie_base.hpp>
```

Inheritance diagram for `__gnu_pbds::detail::pat_trie_base::_Leaf<_ATraits, Metadata >`:

## Public Types

- typedef `_ATraits::const_iterator` **a\_const\_iterator**
- typedef `detail::rebind_traits<_Alloc, _ATraits>::const_pointer` **a\_const\_pointer**
- typedef `_ATraits` **access\_traits**
- typedef `_Alloc` **allocator\_type**
- typedef `_Node_base<_ATraits, Metadata>` **base\_type**
- typedef `type_traits::const_reference` **const\_reference**
- typedef `detail::rebind_traits<_Alloc, _Node_base>::pointer` **node\_pointer**
- typedef `type_traits::reference` **reference**
- typedef `base_type::type_traits` **type\_traits**
- typedef `type_traits::value_type` **value\_type**

## Public Member Functions

- `_Leaf` (const\_reference other)
- reference **value** ()
- const\_reference **value** () const

## Public Attributes

- node\_pointer **m\_p\_parent**
- const `node_type` **m\_type**

### 5.99.1 Detailed Description

```
template<typename _ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Leaf<_ATraits, Metadata>
```

Leaf node for PATRICIA tree.

The documentation for this struct was generated from the following file:

- `pat_trie_base.hpp`

### 5.100 \_\_gnu\_parallel::\_Less<\_T1, \_T2> Struct Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::_Less<_T1, _T2>`:

## Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

## Public Member Functions

- `bool operator() (const _T1 &__t1, const _T2 &__t2) const`
- `bool operator() (const _T2 &__t2, const _T1 &__t1) const`

### 5.100.1 Detailed Description

```
template<typename _T1, typename _T2>
struct __gnu_parallel::_Less<_T1, _T2 >
```

Similar to `std::less`, but allows two different types.

### 5.100.2 Member Typedef Documentation

#### `first_argument_type`

typedef `_T1` [std::binary\\_function<\\_T1, \\_T2, bool >::first\\_argument\\_type](#) [inherited]  
`first_argument_type` is the type of the first argument

#### `result_type`

typedef `bool` [std::binary\\_function<\\_T1, \\_T2, bool >::result\\_type](#) [inherited]  
`result_type` is the return type

#### `second_argument_type`

typedef `_T2` [std::binary\\_function<\\_T1, \\_T2, bool >::second\\_argument\\_type](#) [inherited]  
`second_argument_type` is the type of the second argument

The documentation for this struct was generated from the following file:

- [base.h](#)

## 5.101 `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare >` Class Template Reference

```
#include <multiseq_selection.h>
```

Inheritance diagram for `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare>`:

### Public Types

- typedef `std::pair<_T1, _T2>` `first_argument_type`
- typedef `bool` `result_type`
- typedef `std::pair<_T1, _T2>` `second_argument_type`

### Public Member Functions

- `_Lexicographic` (`_Compare` & `__comp`)
- `bool operator()` (`const std::pair<_T1, _T2>` & `__p1`, `const std::pair<_T1, _T2>` & `__p2`) `const`

#### 5.101.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_Lexicographic<_T1, _T2, _Compare>
```

Compare \_\_a pair of types lexicographically, ascending.

#### 5.101.2 Member Typedef Documentation

##### `first_argument_type`

```
typedef std::pair<_T1, _T2> std::binary_function< std::pair<_T1, _T2>, std::pair<_T1, _T2>, bool>::first_argument_type [inherited]
first_argument_type is the type of the first argument
```

##### `result_type`

```
typedef bool std::binary_function< std::pair<_T1, _T2>, std::pair<_T1, _T2>, bool>::result_type [inherited]
result_type is the return type
```

**second\_argument\_type**

```
typedef std::pair<_T1, _T2> std::binary_function< std::pair<_T1, _T2>, std::pair<_T1, _T2>, bool>::second_argument_type [inherited]
```

`second_argument_type` is the type of the second argument

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

## 5.102 `__gnu_parallel::_LexicographicReverse<_T1, _T2, _Compare>` Class Template Reference

```
#include <multiseq_selection.h>
```

Inheritance diagram for `__gnu_parallel::_LexicographicReverse<_T1, _T2, _Compare>`:

**Public Types**

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

**Public Member Functions**

- `_LexicographicReverse` (`_Compare` &`__comp`)
- `bool operator()` (`const std::pair<_T1, _T2> &__p1`, `const std::pair<_T1, _T2> &__p2`) `const`

**5.102.1 Detailed Description**

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_LexicographicReverse<_T1, _T2, _Compare>
```

Compare `__a` pair of types lexicographically, descending.

**5.102.2 Member Typedef Documentation****first\_argument\_type**

```
typedef _T1 std::binary_function<_T1, _T2, bool>::first_argument_type [inherited]
```

`first_argument_type` is the type of the first argument

**result\_type**

```
typedef bool std::binary\_function< _T1, _T2, bool >::result_type [inherited]
```

result\_type is the return type

**second\_argument\_type**

```
typedef _T2 std::binary\_function< _T1, _T2, bool >::second_argument_type [inherited]
```

second\_argument\_type is the type of the second argument

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

**5.103 std::\_List\_base< \_Tp, \_Alloc > Class Template Reference**

```
#include <stl_list.h>
```

Inheritance diagram for std::\_List\_base< \_Tp, \_Alloc >:

**Public Types**

- [size\\_t](#) **\_M\_size**

#### 5.108.1 Detailed Description

The list node header.

The documentation for this struct was generated from the following file:

- [stl\\_list.h](#)

### 5.109 `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser` Struct Reference

```
#include <losertree.h>
```

#### Public Attributes

- [\\_Tp](#) **\_M\_key**
- [int](#) **\_M\_source**
- [bool](#) **\_M\_sup**

#### 5.109.1 Detailed Description

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser
```

Internal representation of a `_LoserTree` element.

#### 5.109.2 Member Data Documentation

##### `_M_key`

```
template<typename _Tp, typename _Compare>
_Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key
_M_key of the element in the _LoserTree.
```

##### `_M_source`

```
template<typename _Tp, typename _Compare>
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source
__index of the __source __sequence.
```

**\_M\_sup**

```
template<typename _Tp, typename _Compare>
bool __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser::_M_sup
flag, true iff this is a "maximum" __sentinel.
```

The documentation for this struct was generated from the following file:

- [losertree.h](#)

**5.110 `__gnu_parallel::_LoserTreePointerBase<_Tp, _Compare>::_Loser` Struct Reference**

```
#include <losertree.h>
```

**Public Attributes**

- const \_Tp \* **\_M\_keyp**
- int **\_M\_source**
- bool **\_M\_sup**

**5.110.1 Detailed Description**

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreePointerBase<_Tp, _Compare>::_Loser
```

Internal representation of `_LoserTree` \_\_elements.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

**5.111 `__gnu_parallel::_LoserTree<__stable, _Tp, _Compare>` Class Template Reference**

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTree<__stable, _Tp, _Compare>`:

**Public Member Functions**

- **\_LoserTree** (unsigned int \_\_k, \_Compare \_\_comp)

- void [\\_\\_delete\\_min\\_insert](#) (\_Tp \_\_key, bool \_\_sup)
- int [\\_\\_get\\_min\\_source](#) ()
- void [\\_\\_init](#) ()
- unsigned int [\\_\\_init\\_winner](#) (unsigned int \_\_root)
- void [\\_\\_insert\\_start](#) (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

### Protected Attributes

- unsigned int [\\_M\\_ik](#)
- unsigned int [\\_M\\_log\\_k](#)
- unsigned int [\\_M\\_offset](#)

### 5.111.1 Detailed Description

template<bool \_\_stable, typename \_Tp, typename \_Compare>  
class [\\_\\_gnu\\_parallel::LoserTree](#)< \_\_stable, \_Tp, \_Compare >

Stable [\\_LoserTree](#) variant.

Provides the stable implementations of [insert\\_start](#), [\\_\\_init\\_winner](#), [\\_\\_init](#) and [\\_\\_delete\\_min\\_insert](#).

Unstable variant is done using partial specialisation below.

### 5.111.2 Member Function Documentation

#### [\\_\\_delete\\_min\\_insert\(\)](#)

```
template<bool __stable, typename _Tp, typename _Compare>
void \_\_gnu\_parallel::LoserTree< __stable, _Tp, _Compare >::__delete_min_insert (
    _Tp __key,
    bool __sup) [inline]
```

Delete the smallest element and insert a new element from the previously smallest element's sequence.

This implementation is stable.

#### [\\_\\_get\\_min\\_source\(\)](#)

```
template<typename _Tp, typename _Compare>
int \_\_gnu\_parallel::LoserTreeBase< _Tp, _Compare >::__get_min_source () [inline], [inherited]
```

#### Returns

the index of the sequence with the smallest element.

References [\\_M\\_losers](#).

#### [\\_\\_insert\\_start\(\)](#)

```
template<typename _Tp, typename _Compare>
void \_\_gnu\_parallel::LoserTreeBase< _Tp, _Compare >::__insert_start (
    const _Tp & __key,
    int __source,
    bool __sup) [inline], [inherited]
```

Initializes the sequence "[\\_M\\_source](#)" with the element "[\\_\\_key](#)".

#### Parameters

<a href="#">__key</a>	the element to insert
<a href="#">__source</a>	<a href="#">__index</a> of the <a href="#">__source</a> <a href="#">__sequence</a>

<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .
--------------------	---

References [\\_M\\_first\\_insert](#), and [\\_M\\_losers](#).

### 5.111.3 Member Data Documentation

#### `_M_log_k`

```
template<typename _Tp, typename _Compare>
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected], [inherited]
log_2(_M_k)
```

Referenced by [\\_LoserTreeBase\(\)](#).

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.112 `__gnu_parallel::_LoserTree< false, _Tp, _Compare >` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTree< false, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTree` (unsigned int `__k`, `_Compare` `__comp`)
- `_LoserTree` (unsigned int `__k`, `_Compare` `__comp`)
- void [\\_\\_delete\\_min\\_insert](#) (`_Tp` `__key`, bool `__sup`)
- void [\\_\\_delete\\_min\\_insert](#) (`_Tp` `__key`, bool `__sup`)
- int [\\_\\_get\\_min\\_source](#) ()
- void `__init` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- unsigned int [\\_\\_init\\_winner](#) (unsigned int `__root`)
- void [\\_\\_insert\\_start](#) (const `_Tp` & `__key`, int `__source`, bool `__sup`)

## Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_log_k`
- unsigned int `_M_offset`

### 5.112.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< false, _Tp, _Compare >
```

Unstable `_LoserTree` variant.

Stability (non-stable here) is selected with partial specialization.

### 5.112.2 Member Function Documentation

#### `__delete_min_insert()` [1/2]

```
void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::__delete_min_insert (
    _Tp __key,
    bool __sup) [inline]
```

Delete the smallest element and insert a new element from the previously smallest element's sequence. This implementation is stable.

#### `__delete_min_insert()` [2/2]

```
template<typename _Tp, typename _Compare>
void __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__delete_min_insert (
    _Tp __key,
    bool __sup) [inline]
```

Delete the `_M_key` smallest element and insert the element `__key` instead.

#### Parameters

<code>__key</code>	the <code>_M_key</code> to insert
<code>__sup</code>	true iff <code>__key</code> is an explicitly marked supremum

#### `__get_min_source()`

```
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source () [inline]
```

#### Returns

the index of the sequence with the smallest element.

#### `__init_winner()`

```
template<typename _Tp, typename _Compare>
unsigned int __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__init_winner (
    unsigned int __root) [inline]
```

Computes the winner of the competition at position "`__root`".

Called recursively (starting at 0) to build the initial tree.

## Parameters

<code>__root</code>	__index of the "game" to start.
---------------------	---------------------------------

References [\\_\\_init\\_winner\(\)](#).

Referenced by [\\_\\_init\\_winner\(\)](#).

**`__insert_start()`**

```
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
    const _Tp & __key,
    int __source,
    bool __sup) [inline]
```

Initializes the sequence "`_M_source`" with the element "`__key`".

## Parameters

<code>__key</code>	the element to insert
<code>__source</code>	__index of the <code>__source</code> __sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .

**5.112.3 Member Data Documentation****`_M_log_k`**

```
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected]
log_2{_M_k}
```

The documentation for this class was generated from the following file:

- [losertree.h](#)

**5.113 `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >` Class Template Reference**

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >`:

**Classes**

- struct [\\_Loser](#)

## Public Member Functions

- [\\_LoserTreeBase](#) (unsigned int \_\_k, \_Compare \_\_comp)
- [~\\_LoserTreeBase](#) ()
- int [\\_\\_get\\_min\\_source](#) ()
- void [\\_\\_insert\\_start](#) (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

## Protected Attributes

- [\\_Compare](#) [\\_M\\_comp](#)
- bool [\\_M\\_first\\_insert](#)
- unsigned int [\\_M\\_ik](#)
- unsigned int [\\_M\\_k](#)
- unsigned int [\\_M\\_log\\_k](#)
- [\\_Loser](#) \* [\\_M\\_losers](#)
- unsigned int [\\_M\\_offset](#)

### 5.113.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >
```

Guarded loser/tournament tree.

The smallest element is at the top.

Guarding is done explicitly through one flag `_M_sup` per element, `inf` is not needed due to a better initialization routine.

This is a well-performing variant.

#### Parameters

<code>_Tp</code>	the element type
<code>_Compare</code>	the comparator to use, defaults to <code>std::less&lt;_Tp&gt;</code>

### 5.113.2 Constructor & Destructor Documentation

#### `_LoserTreeBase()`

```
template<typename _Tp, typename _Compare>
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase (
    unsigned int __k,
    _Compare __comp) [inline]
```

The constructor.

#### Parameters

<code>__k</code>	The number of sequences to merge.
<code>__comp</code>	The comparator to use.

References [\\_\\_gnu\\_parallel::\\_\\_rd\\_log2\(\)](#), [\\_M\\_comp](#), [\\_M\\_first\\_insert](#), [\\_M\\_log\\_k](#), and [\\_M\\_losers](#).

#### `~_LoserTreeBase()`

```
template<typename _Tp, typename _Compare>
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~_LoserTreeBase () [inline]
```

The destructor.

References [\\_M\\_losers](#).

### 5.113.3 Member Function Documentation

#### `__get_min_source()`

```
template<typename _Tp, typename _Compare>
int __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::__get_min_source () [inline]
```

#### Returns

the index of the sequence with the smallest element.

References [\\_M\\_losers](#).

#### `__insert_start()`

```
template<typename _Tp, typename _Compare>
void __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::__insert_start (
    const _Tp & __key,
    int __source,
    bool __sup) [inline]
```

Initializes the sequence "`_M_source`" with the element "`__key`".

#### Parameters

<code>__key</code>	the element to insert
<code>__source</code>	<code>__index</code> of the <code>__source</code> sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .

References [\\_M\\_first\\_insert](#), and [\\_M\\_losers](#).

### 5.113.4 Member Data Documentation

#### `_M_comp`

```
template<typename _Tp, typename _Compare>
_Compare __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_comp [protected]
```

`_Compare` to use.  
Referenced by [\\_LoserTreeBase\(\)](#).

#### `_M_first_insert`

```
template<typename _Tp, typename _Compare>
bool __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_first_insert [protected]
```

State flag that determines whether the `_LoserTree` is empty.  
Only used for building the `_LoserTree`.  
Referenced by [\\_LoserTreeBase\(\)](#), and [\\_\\_insert\\_start\(\)](#).

#### `_M_log_k`

```
template<typename _Tp, typename _Compare>
unsigned int __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_log_k [protected]
```

`log_2{_M_k}`  
Referenced by [\\_LoserTreeBase\(\)](#).

**\_M\_losers**

```
template<typename _Tp, typename _Compare>
```

```
__Loser* __gnu_parallel::__LoserTreeBase< _Tp, _Compare >::_M_losers [protected]
```

```
__LoserTree __elements.
```

Referenced by [\\_\\_LoserTreeBase\(\)](#), [~\\_\\_LoserTreeBase\(\)](#), [\\_\\_get\\_min\\_source\(\)](#), and [\\_\\_insert\\_start\(\)](#).

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.114 [\\_\\_gnu\\_parallel::\\_\\_LoserTreePointer< \\_\\_stable, \\_Tp, \\_Compare >](#) Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for [\\_\\_gnu\\_parallel::\\_\\_LoserTreePointer< \\_\\_stable, \\_Tp, \\_Compare >](#):

**Public Member Functions**

- [\\_\\_LoserTreePointer](#) (unsigned int \_\_k, [\\_Compare](#) \_\_comp=[std::less](#)< \_Tp >())

- unsigned int **\_\_init\_winner** (unsigned int \_\_root)
- void **\_\_insert\_start** (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- unsigned int **\_M\_ik**
- unsigned int **\_M\_offset**

#### 5.118.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointerUnguarded< false, _Tp, _Compare >
```

Unstable unguarded \_LoserTree variant storing pointers.

Stable variant is above.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.119 `__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointerUnguardedBase` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=[std::less< \\_Tp >\(\)](#))
- int `__get_min_source` ()
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.119.1 Detailed Description

```
template<typename _Tp, typename _Compare>
```

```
class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >
```

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.120 `__gnu_parallel::_LoserTreeTraits< _Tp >` Struct Template Reference

```
#include <multiway_merge.h>
```

### Static Public Attributes

- static const bool `_M_use_pointer`

### 5.120.1 Detailed Description

```
template<typename _Tp>
struct __gnu_parallel::_LoserTreeTraits< _Tp >
```

Traits for determining whether the loser tree should use pointers or copies.

The field "`_M_use_pointer`" is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };
template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };
```

#### Parameters

<code>_Tp</code>	type to give the loser tree traits for.
------------------	---

### 5.120.2 Member Data Documentation

#### `_M_use_pointer`

```
template<typename _Tp>
const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer [static]
```

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

### 5.121 `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference

```

#### 5.122.1 Detailed Description

template<typename \_Tp, typename \_Compare>  
class **\_\_gnu\_parallel::\_LoserTreeUnguarded**< false, \_Tp, \_Compare >

Non-Stable implementation of unguarded \_LoserTree.

Stable implementation is above.

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.123 \_\_gnu\_parallel::\_LoserTreeUnguardedBase< \_Tp, \_Compare > Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for \_\_gnu\_parallel::\_LoserTreeUnguardedBase< \_Tp, \_Compare >:

### Public Member Functions

- **\_LoserTreeUnguardedBase** (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=[std::less](#)< \_Tp >())
- int **\_\_get\_min\_source** ()
- void **\_\_insert\_start** (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser * _M_losers`
- unsigned int `_M_offset`

#### 5.123.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >
```

Base class for unguarded `_LoserTree` implementation.

The whole element is copied into the tree structure.

No guarding is done, therefore not a single input sequence must run empty. Unused `__sequence` heads are marked with a sentinel which is `>` all elements that are to be merged.

This is a very fast variant.

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.124 `__gnu_pbds::detail::pat_trie_base::_Metadata< Metadata, _Alloc >` Struct Template Reference

```
#include <pat_trie_base.hpp>
```

#### Public Types

- typedef `_Alloc` `allocator_type`
- typedef [detail::rebind\\_traits](#)< `_Alloc`, `Metadata` >::const\_reference `const_reference`
- typedef `Metadata` `metadata_type`

#### Public Member Functions

- const\_reference `get_metadata` () const

#### Public Attributes

- metadata\_type `m_metadata`

#### 5.124.1 Detailed Description

```
template<typename Metadata, typename _Alloc>
struct __gnu_pbds::detail::pat_trie_base::_Metadata< Metadata, _Alloc >
```

`Metadata` base primary template.

The documentation for this struct was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

### 5.125 `__gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >` Struct Template Reference

```
#include <pat_trie_base.hpp>
```

## Public Types

- typedef `_Alloc` `allocator_type`
- typedef `_Alloc` `allocator_type`
- typedef `detail::rebind_traits<_Alloc, null_type>::const_reference` `const_reference`
- typedef `null_type` `metadata_type`
- typedef `null_type` `metadata_type`

## Public Member Functions

- `const_reference` `get_metadata` () const

## Public Attributes

- `metadata_type` `m_metadata`

### 5.125.1 Detailed Description

```
template<typename _Alloc>
struct __gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >
```

Specialization for null metadata.

The documentation for this struct was generated from the following file:

- `pat_trie_base.hpp`

## 5.126 \_\_gnu\_parallel::\_Multiplies<\_Tp1, \_Tp2, \_Result > Struct Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result >`:

## Public Types

- typedef `_Arg1` `first_argument_type`
- typedef `_Result` `result_type`
- typedef `_Arg2` `second_argument_type`

**Public Member Functions**

- `_Result operator() (const _Tp1 &__x, const _Tp2 &__y) const`

**5.126.1 Detailed Description**

```
template<typename _Tp1, typename _Tp2, typename _Result = __typeof__(*static_cast<_Tp1*>(0) * *static_cast<_Tp2*>(0))>
struct __gnu_parallel::__Multiplies<_Tp1, _Tp2, _Result>
```

Similar to std::multiplies, but allows two different types.

**5.126.2 Member Typedef Documentation****first\_argument\_type**

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg1 std::binary_function<_Arg1, _Arg2, _Result>::first_argument_type [inherited]
first_argument_type is the type of the first argument
```

**result\_type**

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Result std::binary_function<_Arg1, _Arg2, _Result>::result_type [inherited]
result_type is the return type
```

**second\_argument\_type**

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg2 std::binary_function<_Arg1, _Arg2, _Result>::second_argument_type [inherited]
second_argument_type is the type of the second argument
```

The documentation for this struct was generated from the following file:

- [base.h](#)

**5.127 std::\_\_fwdlst::\_\_Node<\_ValPtr> Struct Template Reference**

```
#include <forward_list.h>
```

Inheritance diagram for `std::__fwlist::_Node<_ValPtr>`:

### Public Types

- using `_Base_ptr`
- using `_Node_ptr`
- using `value_type`

### Public Member Functions

- `_Node` (`_Node` &&)=delete
- `_Base_ptr` `_M_base_ptr` () const
- `_Node_ptr` `_M_node_ptr` ()
- void `_M_reverse_after` () noexcept
- `_Base_ptr` `_M_transfer_after` (`_Base_ptr` \_\_begin, `_Base_ptr` \_\_end) noexcept
- const `value_type` \* `_M_valptr` () const noexcept
- `value_type` \* `_M_valptr` () noexcept

### Public Attributes

### 5.130.1 Detailed Description

`template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _Alloc>`

`class __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >`

Node const iterator.

### 5.130.2 Member Typedef Documentation

#### **metadata\_const\_reference**

`template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _Alloc>`

typedef [rebind\\_traits<\\_Alloc,metadata\\_type>::const\\_reference](#) `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference`

Const metadata reference type.

## metadata\_type

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type
Metadata type.
```

### 5.130.3 Member Function Documentation

#### get\_child()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
__Node_citer __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::get_child (
    size_type i) const [inline]
```

Returns a `__const` node `__iterator` to the corresponding node's *i*-th child.

#### get\_metadata()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata () const [inline]
```

Metadata access.

#### num\_children()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children () const [inline]
```

Returns the number of children in the corresponding node.

Referenced by `__gnu_pbds::detail::pat_trie_base::_Node_citer< node, leaf, head, inode, const_iterator, iterator, _Alloc >::operator*()`.

#### operator"!="()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!= (
    const __Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline]
```

Compares content (negatively) to a different iterator object.

#### operator\*()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _C
Iterator, Iterator, _Alloc >::operator* () const [inline]
```

Const access; returns the `__const` iterator\* associated with the current leaf.

### `operator==()`

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
    const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline]
```

Compares content to a different iterator object.

### `valid_prefix()`

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
std::pair< a_const_iterator, a_const_iterator > __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix () const [inline]
```

Subtree valid prefix.

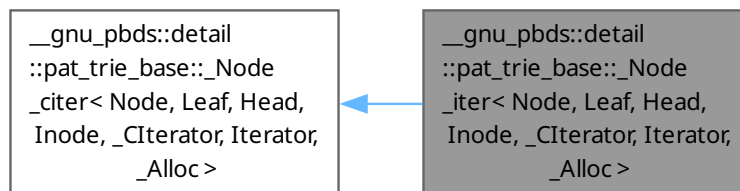

The documentation for this class was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 5.131 `__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >` Class Template Reference

```
#include <pat_trie_base.hpp>
```

Inheritance diagram for `__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >`:

### Public Types

- typedef `rebind_traits`< \_Alloc, Leaf >::pointer `leaf_pointer`

### 5.131.1 Detailed Description

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
class __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >
```

Node iterator.

### 5.131.2 Member Typedef Documentation

#### `metadata_const_reference`

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
typedef rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference [inherited]
Const metadata reference type.
```

#### `metadata_type`

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type [inherited]
Metadata type.
```

### 5.131.3 Member Function Documentation

#### `get_child()`

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
_Node_iter __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator,
```

```
Iterator, _Alloc >::get_child (
    size_type i) const [inline]
```

Returns a node `__iterator` to the corresponding node's i-th child.

### **get\_metadata()**

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata () const [inline], [inherited]
```

Metadata access.

### **num\_children()**

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children () const [inline], [inherited]
```

Returns the number of children in the corresponding node.

Referenced by `__gnu_pbds::detail::pat_trie_base::_Node_citer< node, leaf, head, inode, const_iterator, iterator, _Alloc >::operator*()`.

### **operator"!=()**

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!= (
    const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline], [inherited]
```

Compares content (negatively) to a different iterator object.

### **operator\*()**

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
reference __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::operator* () const [inline]
```

Access; returns the iterator\* associated with the current leaf.

### **operator==(())**

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
    const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline], [inherited]
```

Compares content to a different iterator object.

### **valid\_prefix()**

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
std::pair< a_const_iterator, a_const_iterator > __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix () const [inline], [inherited]
```

Subtree valid prefix.

The documentation for this class was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 5.132 `__gnu_debug::Not_equal_to<_Type>` Class Template Reference

```
#include <safe_sequence.h>
```

### Public Member Functions

- `Not_equal_to` (const `_Type` &\_\_v)
- `bool operator()` (const `_Type` &\_\_x) const

#### 5.132.1 Detailed Description

```
template<typename _Type>
class __gnu_debug::Not_equal_to<_Type>
```

A simple function object that returns true if the passed-in value is not equal to the stored value. It saves typing over using both `bind1st` and `not_equal`.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

#### 5.133.1 Detailed Description

`template<typename _Fn>`  
`class std::__Not_fn< _Fn >`

Generalized negator.

The documentation for this class was generated from the following file:

- [functional](#)

### 5.134 `__gnu_parallel::__Nothing` Struct Reference

`#include <for_each_selectors.h>`

#### Public Member Functions

- `template<typename _It>`  
`void operator() (_It __i)`

#### 5.134.1 Detailed Description

Functor doing nothing.

For some `__reduction` tasks (this is not a function object, but is passed as `__selector` `__dummy` parameter.

#### 5.134.2 Member Function Documentation

##### `operator()`

`template<typename _It>`  
`void __gnu_parallel::__Nothing::operator() (`  
`_It __i) [inline]`

Functor execution.

##### Parameters

<code>↩</code>	iterator referencing object.
<code>__↩</code>	
<code>↩</code>	
<code>__↩</code>	
<code>i</code>	

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## Public Attributes

- `_DifferenceType` [\\_M\\_begin](#)
- `_DifferenceType` [\\_M\\_end](#)

### 5.135.1 Detailed Description

```
template<typename _DifferenceTp>
struct __gnu_parallel::_Piece< _DifferenceTp >
```

Subsequence description.

### 5.135.2 Member Data Documentation

#### `_M_begin`

```
template<typename _DifferenceTp>
_DifferenceType __gnu_parallel::_Piece< _DifferenceTp >::_M_begin
```

Begin of subsequence.

#### `_M_end`

```
template<typename _DifferenceTp>
_DifferenceType __gnu_parallel::_Piece< _DifferenceTp >::_M_end
```

End of subsequence.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.136 `std::_Placeholder< _Num >` Struct Template Reference

```
#include <functional>
```

### 5.136.1 Detailed Description

```
template<int _Num>
struct std::_Placeholder< _Num >
```

The type of placeholder objects defined by libstdc++.

Since

C++11

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.137 `__gnu_parallel::_Plus< _Tp1, _Tp2, _Result >` Struct Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::__Plus<_Tp1, _Tp2, _Result>`:

### Public Types

- typedef `_Arg1` [first\\_argument\\_type](#)
- typedef `_Result` [result\\_type](#)
- typedef `_Arg2` [second\\_argument\\_type](#)

### Public Member Functions

- `_Result` **operator()** (const `_Tp1` &`_x`, const `_Tp2` &`_y`) const

#### 5.137.1 Detailed Description

```
template<typename _Tp1, typename _Tp2, typename _Result = __typeof__((*static_cast<_Tp1*>(0)) + *static_cast<_Tp2*>(0)))>
struct __gnu_parallel::__Plus<_Tp1, _Tp2, _Result>
```

Similar to `std::plus`, but allows two different types.

#### 5.137.2 Member Typedef Documentation

##### `first_argument_type`

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg1 std::binary\_function<\_Arg1, \_Arg2, \_Result>::first\_argument\_type [inherited]
first\_argument\_type is the type of the first argument
```

##### `result_type`

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Result std::binary\_function<\_Arg1, \_Arg2, \_Result>::result\_type [inherited]
result\_type is the return type
```

##### `second_argument_type`

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg2 std::binary\_function<\_Arg1, \_Arg2, \_Result>::second\_argument\_type [inherited]
```

`second_argument_type` is the type of the second argument  
 The documentation for this struct was generated from the following file:

- [base.h](#)

### 5.138 `__gnu_parallel::PMWMSSortingData<_RAIter>` Struct Template Reference

```
#include <multiway_mergesort.h>
```

#### Public Types

- typedef `_TraitsType::difference_type` **`_DifferenceType`**
- typedef `std::iterator_traits<_RAIter>` **`_TraitsType`**
- typedef `_TraitsType::value_type` **`_ValueType`**

#### Public Attributes

- `_ThreadIndex` `_M_num_threads`
- `_DifferenceType` \* `_M_offsets`
- `std::vector<_Piece<_DifferenceType>>` \* `_M_pieces`
- `_ValueType` \* `_M_samples`
- `_RAIter` `_M_source`
- `_DifferenceType` \* `_M_starts`
- `_ValueType` \*\* `_M_temporary`

#### 5.138.1 Detailed Description

```
template<typename _RAIter>
struct __gnu_parallel::PMWMSSortingData<_RAIter>
```

Data accessed by all threads.  
 PMWMS = parallel multiway mergesort

#### 5.138.2 Member Data Documentation

##### `_M_num_threads`

```
template<typename _RAIter>
_ThreadIndex __gnu_parallel::PMWMSSortingData<_RAIter>::_M_num_threads
```

Number of threads involved.  
 Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

##### `_M_offsets`

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::PMWMSSortingData<_RAIter>::_M_offsets
```

Offsets to add to the found positions.  
 Referenced by `__gnu_parallel::parallel_sort_mwms()`.

##### `_M_pieces`

```
template<typename _RAIter>
std::vector<_Piece<_DifferenceType>>* __gnu_parallel::PMWMSSortingData<_RAIter>::_M_pieces
```

Pieces of data to merge [thread][\_\_sequence].  
 Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

**`_M_samples`**

```
template<typename _RAIter>
_ValueType* __gnu_parallel::_PMWSSortingData<_RAIter>::_M_samples
```

Samples.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_determine\\_samples\(\)](#), and [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\(\)](#).

**`_M_source`**

```
template<typename _RAIter>
_RAIter __gnu_parallel::_PMWSSortingData<_RAIter>::_M_source
```

Input `__begin`.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_determine\\_samples\(\)](#), [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\(\)](#), and [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\\_](#)

**`_M_starts`**

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::_PMWSSortingData<_RAIter>::_M_starts
```

Start indices, per thread.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_determine\\_samples\(\)](#), [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\(\)](#), and [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\\_](#)

**`_M_temporary`**

```
template<typename _RAIter>
_ValueType** __gnu_parallel::_PMWSSortingData<_RAIter>::_M_temporary
```

Storage in which to sort.

Referenced by [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\(\)](#), and [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\\_pu\(\)](#).

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

### 5.139.1 Detailed Description

```
template<typename _Storage_policy>
class __gnu_cxx::_Pointer_adapter< _Storage_policy >
```

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' `Allocator::pointer` is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the `Allocator::pointer` typedef appropriately for pointer types. 2) if you need pointer casting, use the `__pointer_cast<>` functions from `ext/cast.h`. This allows pointer cast operations to be overloaded as necessary by custom pointers.

Note: The const qualifier works with this pointer adapter as follows:

```
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const
_Tp> >; _Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* const == const _Pointer_
adapter<_Std_pointer_impl<const _Tp> >;
```

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.140 `__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>` Class Template Reference

```
#include <base.h>
```

### Public Types

- typedef `_DifferenceTp` **`_DifferenceType`**
- typedef [\\_PseudoSequenceIterator](#)< `_Tp`, `uint64_t` > **`iterator`**

### Public Member Functions

- [\\_PseudoSequence](#) (const `_Tp` &\_\_val, `_DifferenceType` \_\_count)
- [iterator begin](#) () const
- [iterator end](#) () const

### 5.140.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >
```

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

#### Parameters

<code>_Tp</code>	Sequence <code>_M</code> value type.
<code>_DifferenceTp</code>	Sequence difference type.

### 5.140.2 Constructor & Destructor Documentation

#### `_PseudoSequence()`

```
template<typename _Tp, typename _DifferenceTp>
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::_PseudoSequence (
    const _Tp & __val,
    _DifferenceType __count) [inline]
```

Constructor.

#### Parameters

<code>__val</code>	Element of the sequence.
<code>__count</code>	Number of (virtual) copies.

### 5.140.3 Member Function Documentation

#### `begin()`

```
template<typename _Tp, typename _DifferenceTp>
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin () const [inline]
```

Begin iterator.

#### `end()`

```
template<typename _Tp, typename _DifferenceTp>
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end () const [inline]
```

End iterator.

The documentation for this class was generated from the following file:

- [base.h](#)

## 5.141 `__gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >` Class Template Reference

```
#include <base.h>
```

#### Public Types

- typedef `_DifferenceTp` `_DifferenceType`

**Public Member Functions**

- `_PseudoSequencerIterator` (const `_Tp` &\_\_val, `_DifferenceType` \_\_pos)
- `bool operator!=` (const `_PseudoSequencerIterator` &\_\_i2)
- `const _Tp & operator*` () const
- `_PseudoSequencerIterator & operator++` ()
- `_PseudoSequencerIterator operator++` (int)
- `_DifferenceType operator-` (const `_PseudoSequencerIterator` &\_\_i2)
- `bool operator==` (const `_PseudoSequencerIterator` &\_\_i2)
- `const _Tp & operator[]` (`_DifferenceType`) const

**5.141.1 Detailed Description**

`template<typename _Tp, typename _DifferenceTp>`  
**class** `__gnu_parallel::_PseudoSequencerIterator<_Tp, _DifferenceTp>`

`_Iterator` associated with `__gnu_parallel::_PseudoSequence`. It features the usual random-access iterator functionality.

**Parameters**

<code>_Tp</code>	Sequence <code>_M_value</code> type.
<code>_DifferenceTp</code>	Sequence difference type.

The documentation for this class was generated from the following file:

- [base.h](#)

**5.142 `__gnu_parallel::__QSBThreadLocal<_RAIter>` Struct Template Reference**

```
#include <balanced_quicksort.h>
```

**Public Types**

- `typedef _TraitsType::difference_type _DifferenceType`
- `typedef std::pair<_RAIter, _RAIter> _Piece`
- `typedef std::iterator_traits<_RAIter> _TraitsType`

**Public Member Functions**

- `_QSBThreadLocal` (int \_\_queue\_size)

**Public Attributes**

- `volatile _DifferenceType * _M_elements_leftover`
- `_Piece _M_global`
- `_Piece _M_initial`
- `_RestrictedBoundedConcurrentQueue<_Piece> _M_leftover_parts`
- `_ThreadIndex _M_num_threads`

**5.142.1 Detailed Description**

`template<typename _RAIter>`  
**struct** `__gnu_parallel::__QSBThreadLocal<_RAIter>`

Information local to one thread in the parallel quicksort run.

### 5.142.2 Member Typedef Documentation

#### **`_Piece`**

```
template<typename _RAIter>
```

```
typedef std::pair<_RAIter, _RAIter> __gnu_parallel::__QSBThreadLocal< _RAIter >::_Piece
```

Continuous part of the sequence, described by an iterator pair.

### 5.142.3 Constructor & Destructor Documentation

#### **`_QSBThreadLocal()`**

```
template<typename _RAIter>
```

```
__gnu_parallel::__QSBThreadLocal< _RAIter >::_QSBThreadLocal (
    int __queue_size) [inline]
```

Constructor.

Parameters

<code>__queue_size</code>	size of the work-stealing queue.
---------------------------	----------------------------------

References [\\_M\\_leftover\\_parts](#).

### 5.142.4 Member Data Documentation

#### **`_M_elements_leftover`**

```
template<typename _RAIter>
```

```
volatile _DifferenceType* __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_elements_leftover
```

Pointer to a counter of elements left over to sort.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_qsb\\_conquer\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#).

#### **`_M_global`**

```
template<typename _RAIter>
```

```
_Piece __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_global
```

The complete sequence to sort.

#### **`_M_initial`**

```
template<typename _RAIter>
```

```
_Piece __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_initial
```

Initial piece to work on.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_qsb\\_conquer\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#).

#### **`_M_leftover_parts`**

```
template<typename _RAIter>
```

```
_RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_↵
leftover_parts
```

Work-stealing queue.

Referenced by [\\_QSBThreadLocal\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#).

**\_M\_num\_threads**

```
template<typename _RAIter>
_ThreadIndex __gnu_parallel::__QSBThreadLocal<_RAIter>::_M_num_threads
```

Number of threads involved in this algorithm.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#).

The documentation for this struct was generated from the following file:

- [balanced\\_quicksort.h](#)

**5.143 std::\_\_detail::\_Quoted\_string<\_String,\_CharT> Struct Template Reference**

```
#include <quoted_string.h>
```

**Public Member Functions**

- [\\_Quoted\\_string](#) (\_String \_\_str, \_CharT \_\_del, \_CharT \_\_esc)
- [\\_Quoted\\_string](#) & **operator=** ([\\_Quoted\\_string](#) &)=delete

**Public Attributes**

- \_CharT **\_M\_delim**
- \_CharT **\_M\_escape**
- \_String **\_M\_string**

**5.143.1 Detailed Description**

```
template<typename _String, typename _CharT>
struct std::__detail::_Quoted_string<_String,_CharT>
```

Struct for delimited strings.

The documentation for this struct was generated from the following file:

- [quoted\\_string.h](#)

**5.144 \_\_gnu\_parallel::\_RandomNumber Class Reference**

```
#include <random_number.h>
```

**Public Member Functions**

- [\\_RandomNumber](#) ()
- [\\_RandomNumber](#) (uint32\_t \_\_seed, uint64\_t \_M\_supremum=0x100000000ULL)
- unsigned long [\\_\\_genrand\\_bits](#) (int \_\_bits)
- uint32\_t [operator\(\)](#) ()
- uint32\_t [operator\(\)](#) (uint64\_t local\_supremum)

**5.144.1 Detailed Description**

Random number generator, based on the Mersenne twister.

**5.144.2 Constructor & Destructor Documentation**

```
\_RandomNumber() [1/2]
```

```
__gnu_parallel::_RandomNumber::_RandomNumber () [inline]
```

Default constructor. Seed with 0.

**\_RandomNumber()** [2/2]

```
__gnu_parallel::_RandomNumber::_RandomNumber (
    uint32_t __seed,
    uint64_t _M_supremum = 0x100000000ULL) [inline]
```

Constructor.

**Parameters**

<code>__seed</code>	Random <code>__seed</code> .
<code>_M_supremum</code>	Generate integer random numbers in the interval <code>[0,_M_supremum)</code> .

**5.144.3 Member Function Documentation****\_\_genrand\_bits()**

```
unsigned long __gnu_parallel::_RandomNumber::_genrand_bits (
    int __bits) [inline]
```

Generate a number of random bits, run-time parameter.

**Parameters**

<code>__bits</code>	Number of bits to generate.
---------------------	-----------------------------

**operator>()** [1/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() () [inline]
```

Generate unsigned random 32-bit integer.

**operator>()** [2/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() (
    uint64_t local_supremum) [inline]
```

Generate unsigned random 32-bit integer in the interval `[0,local_supremum)`.

The documentation for this class was generated from the following file:

- [random\\_number.h](#)

**5.145 \_\_gnu\_cxx::\_Relative\_pointer\_impl<\_Tp> Class Template Reference**

```
#include <pointer.h>
```

Inheritance diagram for `__gnu_cxx::_Relative_pointer_impl<_Tp>`:

### Public Types

- typedef `_Tp` **element\_type**

### Public Member Functions

- `_Tp * get () const`
- `bool operator< (const \_Relative\_pointer\_impl &__arg) const`
- `bool operator== (const \_Relative\_pointer\_impl &__arg) const`
- `void set (_Tp *__arg)`

#### 5.145.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl<_Tp>
```

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.

The documentation for this class was generated from the following file:

- [pointer.h](#)

### 5.146 `__gnu_cxx::_Relative_pointer_impl< const_Tp >` Class Template Reference

```
#include <pointer.h>
```

Inheritance diagram for `__gnu_cxx::_Relative_pointer_impl< const_Tp >`:

#### Public Types

- `typedef _Tp element_type`
- `typedef const_Tp element_type`

#### Public Member Functions

- `_Tp * get () const`
- `const _Tp * get () const`
- `bool operator< (const \_Relative\_pointer\_impl &__arg) const`
- `bool operator< (const \_Relative\_pointer\_impl &__arg) const`
- `bool operator== (const \_Relative\_pointer\_impl &__arg) const`
- `bool operator== (const \_Relative\_pointer\_impl &__arg) const`
- `void set (_Tp *__arg)`
- `void set (const _Tp *__arg)`

#### 5.146.1 Detailed Description

```
template<typename _Tp>
```

```
class __gnu_cxx::_Relative_pointer_impl< const_Tp >
```

`Relative_pointer_impl` needs a specialization for `const T` because of the casting done during pointer arithmetic. The documentation for this class was generated from the following file:

- [pointer.h](#)

### 5.147 `__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >` Class Template Reference

```
#include <queue.h>
```

**Public Member Functions**

- [\\_RestrictedBoundedConcurrentQueue](#) ([\\_SequenceIndex](#) \_\_max\_size)
- [~\\_RestrictedBoundedConcurrentQueue](#) ()
- bool [pop\\_back](#) ([\\_Tp](#) &\_\_t)
- bool [pop\\_front](#) ([\\_Tp](#) &\_\_t)
- void [push\\_front](#) (const [\\_Tp](#) &\_\_t)

**5.147.1 Detailed Description**

```
template<typename _Tp>
```

```
class __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>
```

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

**Parameters**

<code>_Tp</code>	Contained element type.
------------------	-------------------------

**5.147.2 Constructor & Destructor Documentation****`_RestrictedBoundedConcurrentQueue()`**

```
template<typename _Tp>
```

```
\_\_gnu\_parallel::\_RestrictedBoundedConcurrentQueue<_Tp>::_RestrictedBoundedConcurrentQueue (
    \_SequenceIndex __max_size) [inline]
```

Constructor. Not to be called concurrent, of course.

**Parameters**

<code>__max_size</code>	Maximal number of elements to be contained.
-------------------------	---

References [\\_\\_gnu\\_parallel::\\_\\_encode2\(\)](#).

**`~_RestrictedBoundedConcurrentQueue()`**

```
template<typename _Tp>
```

```
\_\_gnu\_parallel::\_RestrictedBoundedConcurrentQueue<_Tp>::~~\_RestrictedBoundedConcurrentQueue ()
[inline]
```

Destructor. Not to be called concurrent, of course.

**5.147.3 Member Function Documentation****`pop_back()`**

```
template<typename _Tp>
```

```
bool \_\_gnu\_parallel::\_RestrictedBoundedConcurrentQueue<_Tp>::pop_back (
    \_Tp &__t) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with `pop_front()`.

References [\\_\\_gnu\\_parallel::\\_\\_compare\\_and\\_swap\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_decode2\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_encode2\(\)](#).

**pop\_front()**

```
template<typename _Tp>
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front (
    _Tp & __t) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with pop\_front().

References [\\_\\_gnu\\_parallel::\\_\\_compare\\_and\\_swap\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_decode2\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_encode2\(\)](#).

**push\_front()**

```
template<typename _Tp>
void __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::push_front (
    const _Tp & __t) [inline]
```

Pushes one element into the queue at the front end. Must not be called concurrently with pop\_front().

#### 5.149.1 Detailed Description

```
template<typename _SafeSequence>
class __gnu_debug::_Safe_forward_list< _SafeSequence >
```

Special iterators swap and invalidation for `forward_list` because of the `before_begin` iterator.

### 5.149.2 Member Function Documentation

#### `_M_detach_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () const [protected], [inherited]
```

Detach all iterators, leaving them singular.

#### `_M_detach_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () const [protected], [inherited]
```

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

#### `_M_get_mutex()`

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex () const [protected], [noexcept], [inherited]
```

For use in `_Safe_sequence`.

#### `_M_invalidate_if()`

```
void __gnu_debug::_Safe_sequence<_SafeSequence>::_M_invalidate_if (
    _Predicate __pred) const [inherited]
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

References [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_next](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_prior](#).

#### `_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () const [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

#### `_M_swap()`

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
    const _Safe_sequence_base & __x) const [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

#### `_M_transfer_from_if()`

```
void __gnu_debug::_Safe_sequence<_SafeSequence>::_M_transfer_from_if (
    const _Safe_sequence<_SafeSequence> & __from,
    _Predicate __pred) const [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 5.149.3 Member Data Documentation

#### `_M_const_iterators`

```
\_Safe\_iterator\_base\* __gnu_debug::_Safe_sequence_base::_M_const_iterators [mutable], [inherited]
```

The list of constant iterators that reference this container.

## **\_M\_iterators**

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [mutable], [inherited]
```

The list of mutable iterators that reference this container.

## **\_M\_version**

```
unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]
```

The container version number. This number may never be 0.

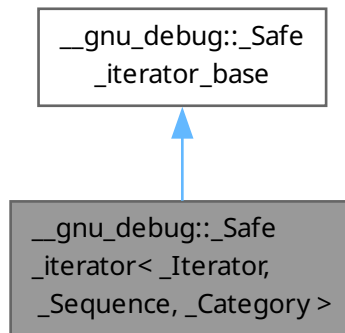

The documentation for this class was generated from the following file:

- [debug/forward\\_list](#)

### 5.150.1 Detailed Description

template<typename \_Iterator, typename \_Sequence, typename \_Category = typename std::iterator\_traits<\_Iterator>::iterator\_category>

class \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, \_Category >

Safe iterator wrapper.

The class template **\_Safe\_iterator** is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), **\_Safe\_iterator** has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Note that **\_Iterator** must be the first base class so that it gets initialized before the iterator is being attached to the container's list of iterators and it is being detached before **\_Iterator** get destroyed. Otherwise it would result in a data race.

### 5.150.2 Constructor & Destructor Documentation

**\_Safe\_iterator**() [1/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator () [inline],
[constexpr], [noexcept]
```

**Postcondition**

the iterator is singular and unattached

**\_Safe\_iterator**() [2/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
    _Iterator __i,
    const _Safe_sequence_base * __seq) [inline], [constexpr], [noexcept]
```

Safe iterator construction from an unsafe iterator and its sequence.

**Precondition**`seq` is not NULL**Postcondition**

this is not singular

**`_Safe_iterator()` [3/5]**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator (
    const __Safe_iterator<_Iterator, _Sequence, _Category> & __x) [inline], [constexpr],
[noexcept]
Copy construction.
```

**`_Safe_iterator()` [4/5]**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator (
    __Safe_iterator<_Iterator, _Sequence, _Category> && __x) [inline], [constexpr],
[noexcept]
Move construction.
```

**Postcondition**`__x` is singular and unattached**`_Safe_iterator()` [5/5]**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
template<typename _MutableIterator>
__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator (
    const __Safe_iterator<_MutableIterator, _Sequence, typename __gnu_cxx::__enable_if<
_IsConstant::__value &&std::__are_same<_MutableIterator, _OtherIterator>::__value, _Category>::__type> & __x) [inline], [constexpr], [noexcept]
Converting constructor from a mutable iterator to a constant iterator.
```

**5.150.3 Member Function Documentation****`_M_attach()` [1/2]**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach (
    const __Safe_sequence_base * __seq) [inline]
Attach iterator to the given sequence.
```

Referenced by `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()` and `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`.

**M\_attach()** [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
    const _Safe_sequence_base * __seq,
    bool __constant) [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

References [\\_M\\_attach\(\)](#).

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::\\_M\\_attach\(\)](#), and [\\_M\\_attach\(\)](#).

**M\_attach\_single()** [1/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category >::_M_attach_single (
    const _Safe_sequence_base * __seq) [inline]
```

Likewise, but not thread-safe.

**M\_attach\_single()** [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
    const _Safe_sequence_base * __seq,
    bool __constant) [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.

References [\\_M\\_attach\\_single\(\)](#).

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::\\_M\\_attach\\_single\(\)](#), and [\\_M\\_attach\\_single\(\)](#).

**M\_attached\_to()**

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const _Safe_sequence_base * __seq) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

References [\\_M\\_attached\\_to\(\)](#), and [\\_M\\_sequence](#).

Referenced by [\\_M\\_attached\\_to\(\)](#).

**M\_before\_dereferenceable()**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category >::_M_before_dereferenceable (
    const [inline]
```

Is the iterator before a dereferenceable one?

**M\_can\_compare()**

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const _Safe_iterator_base & __x) const [noexcept], [inherited]
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

References [\\_Safe\\_iterator\\_base\(\)](#), and [\\_M\\_can\\_compare\(\)](#).

Referenced by [\\_M\\_can\\_compare\(\)](#).

**`_M_dereferenceable()`**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable () const
[inline]
```

Is the iterator dereferenceable?

Referenced by `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator*()`, and `__gnu_debug::_Safe_iterator< _Base_iterator, m`

**`_M_detach()`**

```
void __gnu_debug::_Safe_iterator_base::_M_detach () [protected], [inherited]
```

Detach the iterator for whatever sequence it is attached to, if any.

References `_M_detach()`.

Referenced by `__gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator()`, `_M_detach()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=()`, and `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=()`.

**`_M_detach_single()`**

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single () [noexcept], [inherited]
```

Likewise, but not thread-safe.

**`_M_get_mutex()`**

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex () [protected], [noexcept],
[inherited]
```

For use in `_Safe_iterator`.

Referenced by `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++()`, `__gnu_debug::_Safe_local_iterator< _OtherIterator, map >::operator++()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=()`, `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=()`, and `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=()`.

**`_M_incrementable()`**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable () const
[inline]
```

Is the iterator incrementable?

Referenced by `__gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_before_dereferenceable()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++()`, and `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++()`.

**`_M_invalidate()`**

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline], [inherited]
```

Invalidate the iterator, making it singular.

References `_M_invalidate()`, and `_M_version`.

Referenced by `_M_invalidate()`.

**`_M_is_before_begin()`**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_before_begin () const
[inline]
```

Is this iterator equal to the sequence's `before_begin()` iterator if any?

Referenced by `__gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_dereferenceable()`.

Is the iterator value-initialized?

Referenced by `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`, and `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`.

### `_S_constant()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
static constexpr bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_S_constant() [inline], [static], [constexpr]
```

Determine if this is a constant iterator.

Referenced by `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_M_attach()`, and `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_M_attach()`.

### `base()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
_Iterator & __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::base() [inline], [constexpr], [noexcept]
```

Return the underlying iterator.

Referenced by `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_M_is_begin()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_M_is_end()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::_M_value_initialized()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator++()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator--()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`, and `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`.

### `operator_iterator()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator_iterator() const [inline], [constexpr], [noexcept]
```

Conversion to underlying non-debug iterator to allow better interaction with non-debug containers.

### `operator*()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
reference __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator*() const [inline], [nodiscard], [constexpr], [noexcept]
```

Iterator dereference.

#### Precondition

iterator is dereferenceable

### `operator++()` [1/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator & __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator++() [inline], [constexpr], [noexcept]
```

Iterator preincrement.

**Precondition**

iterator is incrementable

**operator++()** [2/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
_Safe_iterator __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator++ (
    int ) [inline], [constexpr], [noexcept]
```

Iterator postincrement.

**Precondition**

iterator is incrementable

**operator->()**

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
pointer __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator-> () const [inline],
[nodiscard], [constexpr], [noexcept]
```

Iterator dereference.

**Precondition**

iterator is dereferenceable

**operator=()** [1/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
_Safe_iterator & __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator= (
    _Safe_iterator< _Iterator, _Sequence, _Category > && __x) [inline], [constexpr],
[noexcept]
```

Move assignment.

**Postcondition**

\_\_x is singular and unattached

**operator=()** [2/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
_Safe_iterator & __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator= (
    const _Safe_iterator< _Iterator, _Sequence, _Category > & __x) [inline], [constexpr],
[noexcept]
```

Copy assignment.

**5.150.4 Member Data Documentation****\_M\_next**

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next [inherited]
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `__gnu_debug::_Safe_sequence< _SafeSequence >`, `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`, and `_M_unlink()`.

**`_M_prior`**

`_Safe_iterator_base* __gnu_debug::Safe_iterator_base::_M_prior` [inherited]

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `__gnu_debug::Safe_sequence<_SafeSequence>::_M_transfer_from_if()`, and `_M_unlink()`.

**`_M_sequence`**

`const _Safe_sequence_base* __gnu_debug::Safe_iterator_base::_M_sequence` [inherited]

The sequence this iterator references; may be `NULL` to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as const.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_M_attached_to()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::Safe_local_iterator<_OtherIterator, _UContainer>::operator=()`, and `__gnu_debug::Safe_local_iterator<_OtherIterator, _UContainer>::operator=()`.

**`_M_version`**

`unsigned int __gnu_debug::Safe_iterator_base::_M_version` [inherited]

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Referenced by `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_M_invalidate()`, and `__gnu_debug::Safe_sequence<_SafeSequence>::_M_transfer_from_if()`.

The documentation for this class was generated from the following files:

- `boost_concept_check.h`
- `safe_iterator.h`
- `safe_iterator.tcc`

**5.151 `__gnu_debug::Safe_iterator_base` Class Reference**

```
#include <safe_base.h>

### Friends

- class `_Safe_sequence_base`

#### 5.151.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_iterator_base` base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

#### 5.151.2 Constructor & Destructor Documentation

##### `_Safe_iterator_base`() [1/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base () [inline], [constexpr], [protected]
```

Initializes the iterator and makes it singular.

References `_M_next`, `_M_prior`, `_M_sequence`, and `_M_version`.

Referenced by `_Safe_iterator_base()`, and `_M_can_compare()`.

##### `_Safe_iterator_base`() [2/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
    const _Safe_sequence_base * __seq,
    bool __constant) [inline], [constexpr], [protected]
```

Initialize the iterator to reference the sequence pointed to by `__seq`. `__constant` is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

References `_M_attach()`, `_M_next`, `_M_prior`, `_M_sequence`, and `_M_version`.

**`_Safe_iterator_base()`** [3/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
    const \_Safe\_iterator\_base & __x,
    bool __constant) [inline], [constexpr], [protected]
```

Initializes the iterator to reference the same sequence that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

References [\\_Safe\\_iterator\\_base\(\)](#), [\\_M\\_attach\(\)](#), [\\_M\\_next](#), [\\_M\\_prior](#), [\\_M\\_sequence](#), and [\\_M\\_version](#).

**5.151.3 Member Function Documentation****`_M_attach()`**

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
    const \_Safe\_sequence\_base * __seq,
    bool __constant) [protected]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

References [\\_M\\_attach\(\)](#).

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::\\_M\\_attach\(\)](#), and [\\_M\\_attach\(\)](#).

**`_M_attach_single()`**

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
    const \_Safe\_sequence\_base * __seq,
    bool __constant) [protected], [noexcept]
```

Likewise, but not thread-safe.

References [\\_M\\_attach\\_single\(\)](#).

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::\\_M\\_attach\\_single\(\)](#), and [\\_M\\_attach\\_single\(\)](#).

**`_M_attached_to()`**

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const \_Safe\_sequence\_base * __seq) const [inline]
```

Determines if we are attached to the given sequence.

References [\\_M\\_attached\\_to\(\)](#), and [\\_M\\_sequence](#).

Referenced by [\\_M\\_attached\\_to\(\)](#).

**`_M_can_compare()`**

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const \_Safe\_iterator\_base & __x) const [noexcept]
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

References [\\_Safe\\_iterator\\_base\(\)](#), and [\\_M\\_can\\_compare\(\)](#).

Referenced by [\\_M\\_can\\_compare\(\)](#).

**`_M_detach()`**

```
void __gnu_debug::_Safe_iterator_base::_M_detach () [protected]
```

Detach the iterator for whatever sequence it is attached to, if any.

References [\\_M\\_detach\(\)](#).

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::\\_Safe\\_iterator\(\)](#), [\\_M\\_detach\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::operator=\(\)](#).

**`_M_detach_single()`**

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single () [noexcept]
```

Likewise, but not thread-safe.

**`_M_get_mutex()`**

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex () [protected], [noexcept]
```

For use in `_Safe_iterator`.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator++\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator=\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator=\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#).

**`_M_invalidate()`**

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline]
```

Invalidate the iterator, making it singular.

References [\\_M\\_invalidate\(\)](#), and [\\_M\\_version](#).

Referenced by [\\_M\\_invalidate\(\)](#).

**`_M_reset()`**

```
void __gnu_debug::_Safe_iterator_base::_M_reset () [noexcept]
```

Reset all member variables

**`_M_singular()`**

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const [noexcept]
```

Is this iterator singular?

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_Safe\\_local\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_Safe\\_local\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_Safe\\_local\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_check\\_singular\\_aux\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_M\\_dereferenceable\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_M\\_dereferenceable\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_M\\_incrementable\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_M\\_incrementable\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator=\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#).

**`_M_unlink()`**

```
void __gnu_debug::_Safe_iterator_base::_M_unlink () [inline], [noexcept]
```

Unlink itself

References [\\_M\\_next](#), [\\_M\\_prior](#), and [\\_M\\_unlink\(\)](#).

Referenced by [\\_M\\_unlink\(\)](#).

**5.151.4 Member Data Documentation****`_M_next`**

```
\_Safe\_iterator\_base\* __gnu_debug::_Safe_iterator_base::_M_next
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence` != NULL.

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_SafeSequence>::\\_Safe\\_sequence\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#), and [\\_M\\_unlink\(\)](#).

**\_M\_prior**

```
\_Safe\_iterator\_base\* __gnu_debug::_Safe_iterator_base::_M_prior
```

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_SafeSequence>::\\_M\\_transfer\\_from\\_if\(\)](#), and [\\_M\\_unlink\(\)](#).

**\_M\_sequence**

```
const \_Safe\_sequence\_base\* __gnu_debug::_Safe_iterator_base::_M_sequence
```

The sequence this iterator references; may be NULL to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as const.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_M\\_attached\\_to\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator=\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator=\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#).

**\_M\_version**

```
unsigned int __gnu_debug::_Safe_iterator_base::_M_version
```

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_M\\_invalidate\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_SafeSequence>::\\_M\\_transfer\\_from\\_if\(\)](#).

### 5.152.1 Detailed Description

```
template<typename _Iterator, typename _UContainer>
class __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >
```

Safe iterator wrapper.

The class template `_Safe_local_iterator` is a wrapper around an iterator that tracks the iterator's movement among unordered containers and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_local_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from unordered containers, and querying the iterator's state.

### 5.152.2 Constructor & Destructor Documentation

#### `_Safe_local_iterator()` [1/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator () [inline],
[noexcept]
```

##### Postcondition

the iterator is singular and unattached

#### `_Safe_local_iterator()` [2/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
    _Iterator __i,
    const _Safe_unordered_container_base * __cont) [inline]
```

Safe iterator construction from an unsafe iterator and its unordered container.

##### Precondition

`cont` is not NULL

##### Postcondition

this is not singular

#### `_Safe_local_iterator()` [3/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
    const _Safe_local_iterator< _Iterator, _UContainer > & __x) [inline], [noexcept]
```

Copy construction.

#### `_Safe_local_iterator()` [4/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
    _Safe_local_iterator< _Iterator, _UContainer > && __x) [inline], [noexcept]
```

Move construction.

##### Postcondition

`__x` is singular and unattached

**`_Safe_local_iterator()`** [5/5]

```
template<typename _Iterator, typename _UContainer>
template<typename _MutableIterator>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
    const __Safe_local_iterator< _MutableIterator, typename __gnu_cxx::__enable_if< _↵
IsConstant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _UContainer
>::__type > & __x) [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.

**5.152.3 Member Function Documentation****`_M_attach()`** [1/3]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
    const __Safe_sequence_base * __seq,
    bool __constant) [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

References `_M_attach()`.

Referenced by `_Safe_iterator_base()`, `_Safe_iterator_base()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach()`, and `_M_attach()`.

**`_M_attach()`** [2/3]

```
template<typename _Iterator, typename _UContainer>
void __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_attach (
    const __Safe_unordered_container_base * __cont) [inline]
```

Attach iterator to the given unordered container.

Referenced by `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator()`, `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator()`, `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=()`, and `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=()`.

**`_M_attach()`** [3/3]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
    const __Safe_unordered_container_base * __cont,
    bool __constant) [protected], [inherited]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by `_Safe_local_iterator_base()`, `_Safe_local_iterator_base()`, and `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=()`.

**`_M_attach_single()`** [1/3]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
    const __Safe_sequence_base * __seq,
    bool __constant) [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.

References `_M_attach_single()`.

Referenced by `__gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach_single()`, and `_M_attach_single()`.

**`_M_attach_single()`** [2/3]

```
template<typename _Iterator, typename _UContainer>
void __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_attach_single (
    const __Safe_unordered_container_base * __cont) [inline]
```

Likewise, but not thread-safe.

### `_M_attach_single()` [3/3]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
    const __Safe_unordered_container_base * __cont,
    bool __constant) [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_local_iterator<_OtherIterator, _UContainer>::_M_attach_single()`.

### `_M_attached_to()`

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const __Safe_sequence_base * __seq) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

References `_M_attached_to()`, and `_M_sequence`.

Referenced by `_M_attached_to()`.

### `_M_can_compare()`

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const __Safe_iterator_base & __x) const [noexcept], [inherited]
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

References `_Safe_iterator_base()`, and `_M_can_compare()`.

Referenced by `_M_can_compare()`.

### `_M_dereferenceable()`

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator<_Iterator, _UContainer>::_M_dereferenceable () const
[inline]
```

Is the iterator dereferenceable?

Referenced by `__gnu_debug::_Safe_local_iterator<_OtherIterator, _UContainer>::operator*()`, and `__gnu_debug::_Safe_local_iterator`.

### `_M_detach()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach () [protected], [inherited]
```

Detach the iterator for whatever container it is attached to, if any.

Referenced by `__gnu_debug::_Safe_local_iterator<_OtherIterator, _UContainer>::_Safe_local_iterator()`, `__gnu_debug::_Safe_local_iterator`, and `__gnu_debug::_Safe_local_iterator<_OtherIterator, _UContainer>::operator=()`.

### `_M_detach_single()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single () [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.

### `_M_get_mutex()`

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex () [protected], [noexcept],
[inherited]
```

For use in `_Safe_iterator`.

Referenced by `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator++()`, `__gnu_debug::_Safe_local_iterator<_OtherIterator, __gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::_Safe_local_iterator<_OtherIterator, _UContainer>::operator=()`, and `__gnu_debug::_Safe_local_iterator<_OtherIterator`.

### **`_M_in_same_bucket()`**

```
template<typename _Iterator, typename _UContainer>
template<typename _Other>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_in_same_bucket (
    const __Safe_local_iterator< _Other, _UContainer > & __other) const [inline]
```

Is this iterator part of the same bucket as the other one?

### **`_M_incrementable()`**

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_incrementable () const [inline]
```

Is the iterator incrementable?

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator< \\_OtherIterator, \\_UContainer >::operator++\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator](#)

### **`_M_invalidate()`**

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline], [inherited]
```

Invalidate the iterator, making it singular.

References [\\_M\\_invalidate\(\)](#), and [\\_M\\_version](#).

Referenced by [\\_M\\_invalidate\(\)](#).

### **`_M_is_begin()`**

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_is_begin () const [inline]
```

Is this iterator equal to the container's begin(bucket) iterator?

### **`_M_is_end()`**

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_is_end () const [inline]
```

Is this iterator equal to the container's end(bucket) iterator?

**`_S_constant()`**

```
template<typename _Iterator, typename _UContainer>
```

```
static constexpr bool __gnu_debug::_Safe_local_iterator<_Iterator, _UContainer>::_S_constant ()  
[inline], [static], [constexpr]
```

Determine if this is a constant iterator.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_M\\_attach\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#).

**`base()`**

```
template<typename _Iterator, typename _UContainer>
```

```
_Iterator & __gnu_debug::_Safe_local_iterator<_Iterator, _UContainer>::base () [inline], [noexcept]
```

Return the underlying iterator.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_Safe\\_local\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_M\\_is\\_end\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::bucket\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator++\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#).

**`bucket()`**

```
template<typename _Iterator, typename _UContainer>
```

```
size_type __gnu_debug::_Safe_local_iterator<_Iterator, _UContainer>::bucket () const [inline]
```

Return the bucket.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_M\\_in\\_same\\_bucket\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_M\\_is\\_end\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::\\_M\\_is\\_end\(\)](#).

**`operator_iterator()`**

```
template<typename _Iterator, typename _UContainer>
```

```
__gnu_debug::_Safe_local_iterator<_Iterator, _UContainer>::operator_iterator () const [inline]
```

Conversion to underlying non-debug iterator to allow better interaction with non-debug containers.

**`operator*()`**

```
template<typename _Iterator, typename _UContainer>
```

```
reference __gnu_debug::_Safe_local_iterator<_Iterator, _UContainer>::operator* () const [inline]
```

Iterator dereference.

**Precondition**

iterator is dereferenceable

**operator++()** [1/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator & __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator++ ()
[inline]
```

Iterator preincrement.

**Precondition**

iterator is incrementable

**operator++()** [2/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator++ (
    int ) [inline]
```

Iterator postincrement.

**Precondition**

iterator is incrementable

**operator->()**

```
template<typename _Iterator, typename _UContainer>
pointer __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator-> () const [inline]
```

Iterator dereference.

**Precondition**

iterator is dereferenceable

**operator=()** [1/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator & __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator= (
    _Safe_local_iterator< _Iterator, _UContainer > && __x) [inline], [noexcept]
```

Move assignment.

**Postcondition**

\_\_x is singular and unattached

**operator=()** [2/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator & __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator= (
    const _Safe_local_iterator< _Iterator, _UContainer > & __x) [inline]
```

Copy assignment.

#### 5.152.4 Member Data Documentation

##### `_M_next`

`_Safe_iterator_base* __gnu_debug::Safe_iterator_base::_M_next` [inherited]

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `__gnu_debug::Safe_sequence<_SafeSequence>`

`__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, and `_M_unlink()`.

##### `_M_prior`

`_Safe_iterator_base* __gnu_debug::Safe_iterator_base::_M_prior` [inherited]

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `__gnu_debug::Safe_sequence<_SafeSequence>`

`__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, and `_M_unlink()`.

##### `_M_sequence`

`const _Safe_sequence_base* __gnu_debug::Safe_iterator_base::_M_sequence` [inherited]

The sequence this iterator references; may be `NULL` to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as `const`.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `__gnu_debug::Safe_iterator<_Base_iterator, m`

`__gnu_debug::Safe_iterator<_Base_iterator, map>::_Safe_iterator()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`,

`_Safe_iterator_base()`, `_M_attached_to()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`,

`__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`,

`__gnu_debug::Safe_local_iterator<_OtherIterator, _UContainer>::operator=()`, and `__gnu_debug::Safe_local_iterator<_OtherIterator`

##### `_M_version`

`unsigned int __gnu_debug::Safe_iterator_base::_M_version` [inherited]

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Referenced by `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_Safe_iterator_base()`, `_M_invalidate()`, and `__gnu_debug::Safe_sequence`

The documentation for this class was generated from the following files:

#### 5.153.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_local_iterator_base` base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

#### 5.153.2 Constructor & Destructor Documentation

##### `_Safe_local_iterator_base`() [1/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base () [inline], [protected]
```

Initializes the iterator and makes it singular.

Referenced by `_Safe_local_iterator_base`().

##### `_Safe_local_iterator_base`() [2/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
    const _Safe_unordered_container_base * __seq,
    bool __constant) [inline], [protected]
```

Initialize the iterator to reference the container pointed to by `__seq`. `__constant` is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

References `_M_attach`().

**`_Safe_local_iterator_base()`** [3/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
    const \_Safe\_local\_iterator\_base & __x,
    bool __constant) [inline], [protected]
```

Initializes the iterator to reference the same container that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

References [\\_Safe\\_local\\_iterator\\_base\(\)](#), and [\\_M\\_attach\(\)](#).

**5.153.3 Member Function Documentation****`_M_attach()`** [1/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
    const \_Safe\_sequence\_base * __seq,
    bool __constant) [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

References [\\_M\\_attach\(\)](#).

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::\\_M\\_attach\(\)](#), and [\\_M\\_attach\(\)](#).

**`_M_attach()`** [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
    const \_Safe\_unordered\_container\_base * __cont,
    bool __constant) [protected]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by [\\_Safe\\_local\\_iterator\\_base\(\)](#), [\\_Safe\\_local\\_iterator\\_base\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, UContainer >::\\_M\\_attach\(\)](#).

**`_M_attach_single()`** [1/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
    const \_Safe\_sequence\_base * __seq,
    bool __constant) [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.

References [\\_M\\_attach\\_single\(\)](#).

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map >::\\_M\\_attach\\_single\(\)](#), and [\\_M\\_attach\\_single\(\)](#).

**`_M_attach_single()`** [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
    const \_Safe\_unordered\_container\_base * __cont,
    bool __constant) [protected], [noexcept]
```

Likewise, but not thread-safe.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, UContainer >::\\_M\\_attach\\_single\(\)](#).

**`_M_attached_to()`**

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const \_Safe\_sequence\_base * __seq) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

References [\\_M\\_attached\\_to\(\)](#), and [\\_M\\_sequence](#).

Referenced by [\\_M\\_attached\\_to\(\)](#).

**`_M_unlink()`**

```
void __gnu_debug::_Safe_iterator_base::_M_unlink () [inline], [noexcept], [inherited]
```

Unlink itself

References [\\_M\\_next](#), [\\_M\\_prior](#), and [\\_M\\_unlink\(\)](#).

Referenced by [\\_M\\_unlink\(\)](#).

**5.153.4 Member Data Documentation****`_M_next`**

```
\_Safe\_iterator\_base\* __gnu_debug::_Safe_iterator_base::_M_next [inherited]
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_SafeSequence>::\\_M\\_transfer\\_from\\_if\(\)](#), and [\\_M\\_unlink\(\)](#).

**`_M_prior`**

```
\_Safe\_iterator\_base\* __gnu_debug::_Safe_iterator_base::_M_prior [inherited]
```

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_SafeSequence>::\\_M\\_transfer\\_from\\_if\(\)](#), and [\\_M\\_unlink\(\)](#).

**`_M_sequence`**

```
const \_Safe\_sequence\_base\* __gnu_debug::_Safe_iterator_base::_M_sequence [inherited]
```

The sequence this iterator references; may be NULL to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as const.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::\\_Safe\\_iterator\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_M\\_attached\\_to\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator=\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Base\\_iterator, map>::operator=\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_OtherIterator, \\_UContainer>::operator=\(\)](#).

**`_M_version`**

```
unsigned int __gnu_debug::_Safe_iterator_base::_M_version [inherited]
```

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_Safe\\_iterator\\_base\(\)](#), [\\_M\\_invalidate\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#).

The documentation for this class was generated from the following file:

- [safe\\_unordered\\_base.h](#)

**5.154 `__gnu_debug::_Safe_node_sequence<_Sequence>` Class Template Reference**

```
#include <safe_sequence.h>
```

Inheritance diagram for `__gnu_debug::_Safe_node_sequence<_Sequence>`:

### Public Member Functions

- `template<typename _Predicate>`  
`void _M_invalidate_if ( _Predicate __pred) const`
- `template<typename _Predicate>`  
`void _M_transfer_from_if (const _Safe_sequence &__from, _Predicate __pred) const`

### Public Attributes

- `_Safe_iterator_base * _M_const_iterators`
- `_Safe_iterator_base * _M_iterators`
- `unsigned int _M_version`

### Protected Member Functions

- `void _M_detach_all () const`
- `void _M_detach_singular () const`
- `__gnu_cxx::__mutex & _M_get_mutex () const noexcept`
- `void _M_invalidate_all () const`
- `void _M_revalidate_singular () const`
- `void _M_swap (const _Safe_sequence_base &__x) const noexcept`

#### 5.154.1 Detailed Description

`template<typename _Sequence>`  
**class** `__gnu_debug::_Safe_node_sequence<_Sequence>`

Like `_Safe_sequence` but with a special `_M_invalidate_all` implementation not invalidating past-the-end iterators. Used by node based sequence.

### 5.154.2 Member Function Documentation

#### **`_M_detach_all()`**

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () const [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by [~\\_Safe\\_sequence\\_base\(\)](#).

#### **`_M_detach_singular()`**

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () const [protected], [inherited]
```

Detach all singular iterators.

#### **Postcondition**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

#### **`_M_get_mutex()`**

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex () const [protected], [noexcept],  
[inherited]
```

For use in `_Safe_sequence`.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_unordered\\_container<\\_Container>::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_unordered\\_container<\\_Container>::\\_M\\_invalidate\\_local\\_if\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_invalidate\\_if\(\)](#).

#### **`_M_invalidate_if()`**

```
template<typename _Sequence>  
template<typename _Predicate>  
void __gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if (  
    _Predicate __pred) const [inherited]
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true.

`__pred` will be invoked with the normal iterators nested in the safe ones.

References [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_const\\_iterators](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_get\\_mutex\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_iterators](#).

#### **`_M_revalidate_singular()`**

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () const [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

#### **`_M_swap()`**

```
void __gnu_debug::_Safe_sequence_base::_M_swap (  
    const _Safe_sequence_base & __x) const [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

#### **`_M_transfer_from_if()`**

```
template<typename _Sequence>  
template<typename _Predicate>  
void __gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if (  
    const _Safe_sequence<_Sequence> & __from,  
    _Predicate __pred) const [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

References `std::__addressof()`, `__gnu_debug::Safe_sequence_base::M_const_iterators`, `__gnu_debug::Safe_sequence_base::M_g`, `__gnu_debug::Safe_sequence_base::M_iterators`, `__gnu_debug::Safe_iterator_base::M_next`, `__gnu_debug::Safe_iterator_base::`, `__gnu_debug::Safe_iterator_base::M_sequence`, `__gnu_debug::Safe_iterator_base::M_version`, and `__gnu_debug::Safe_sequence`.

### 5.154.3 Member Data Documentation

#### `_M_const_iterators`

`_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [mutable], [inherited]

The list of constant iterators that reference this container.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_invalidate_if()`, `__gnu_debug::Safe_unordered_container<_Conta` and `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

#### `_M_iterators`

`_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [mutable], [inherited]

The list of mutable iterators that reference this container.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_invalidate_if()`, `__gnu_debug::Safe_unordered_container<_Conta` and `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

#### `_M_version`

`unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable], [inherited]

The container version number. This number may never be 0.

Referenced by `_M_invalidate_all()`, `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, `__gnu_debug::Safe_iterator`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::Safe_local_iterator<_OtherIterator, _UContainer>` and `__gnu_debug::Safe_local_iterator<_OtherIterator, _UContainer>::operator=()`.

The documentation for this class was generated from the following file:

- `safe_sequence.h`

### 5.155.1 Detailed Description

```

template<typename _Sequence>
class __gnu_debug::_Safe_sequence<_Sequence>

```

Base class for constructing a *safe* sequence type that tracks iterators that reference it.

The class template `_Safe_sequence` simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `_Safe_iterator` for this sequence. Iterators will then be tracked automatically.

### 5.155.2 Member Function Documentation

#### `_M_detach_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () const [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by [~\\_Safe\\_sequence\\_base\(\)](#).

#### `_M_detach_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () const [protected], [inherited]
```

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

#### `_M_get_mutex()`

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex () const [protected], [noexcept], [inherited]
```

For use in `_Safe_sequence`.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_unordered\\_container<\\_Container>::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_unordered\\_container<\\_Container>::\\_M\\_invalidate\\_local\\_if\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_invalidate\\_all\(\)](#).

#### `_M_invalidate_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all () const [inline], [protected], [inherited]
```

Invalidates all iterators.

References [\\_M\\_invalidate\\_if\(\)](#), and [\\_M\\_version](#).

Referenced by [\\_M\\_invalidate\\_all\(\)](#).

#### `_M_invalidate_if()`

```
template<typename _Sequence>
template<typename _Predicate>
void __gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if (
    _Predicate __pred) const
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

References [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_const\\_iterators](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_get\\_mutex\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_iterators](#).

#### `_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () const [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

### **`_M_swap()`**

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
    const _Safe_sequence_base & __x) const [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### **`_M_transfer_from_if()`**

```
template<typename _Sequence>
template<typename _Predicate>
void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (
    const _Safe_sequence< _Sequence > & __from,
    _Predicate __pred) const
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

References `std::addressof()`, `__gnu_debug::_Safe_sequence_base::_M_const_iterators`, `__gnu_debug::_Safe_sequence_base::_M_g`, `__gnu_debug::_Safe_sequence_base::_M_iterators`, `__gnu_debug::_Safe_iterator_base::_M_next`, `__gnu_debug::_Safe_iterator_base::_M_sequence`, `__gnu_debug::_Safe_iterator_base::_M_version`, and `__gnu_debug::_Safe_sequence`.

## **5.155.3 Member Data Documentation**

### **`_M_const_iterators`**

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [mutable], [inherited]
```

The list of constant iterators that reference this container.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_unordered_container< _Container, _Key, _Compare, _Hash, _Alloc >::_M_transfer_from_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

### **`_M_iterators`**

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [mutable], [inherited]
```

The list of mutable iterators that reference this container.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, `__gnu_debug::_Safe_unordered_container< _Container, _Key, _Compare, _Hash, _Alloc >::_M_transfer_from_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

### **`_M_version`**

```
unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]
```

The container version number. This number may never be 0.

Referenced by `_M_invalidate_all()`, `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`, `__gnu_debug::_Safe_iterator_base::_M_next`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=()`, `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=()`, and `__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=()`.

- `safe_sequence.tcc`

## **5.156 `__gnu_debug::_Safe_sequence_base` Class Reference**

```
#include <safe_base.h>
```

The diagram illustrates the dependency structure of GNU debug symbols. It features a central node, `gnu_debug::Safe_sequence_base`, which is the base for many other symbols. Other key nodes include `gnu_debug::Safe_unordered_container_base` at the bottom, and various container-specific symbols like `Safe_forward_list`, `Safe_list`, `Safe_map`, `Safe_multimap`, `Safe_multiset`, `Safe_vector`, `Safe_unordered_map`, `Safe_unordered_multimap`, `Safe_unordered_multiset`, and `Safe_unordered_vector`. The nodes are interconnected by blue arrows, representing the dependencies between these symbols. The graph is organized into layers, with the central node at the top and the base nodes at the bottom. The nodes are labeled with their respective container types and the debug symbols they depend on, such as `Safe_sequence_base`, `Safe_forward_list`, `Safe_list`, `Safe_map`, `Safe_multimap`, `Safe_multiset`, `Safe_vector`, `Safe_unordered_map`, `Safe_unordered_multimap`, `Safe_unordered_multiset`, and `Safe_unordered_vector`.

## Friends

- class [\\_Safe\\_iterator\\_base](#)

### 5.156.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence.

The [\\_Safe\\_sequence\\_base](#) class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from [\\_Safe\\_sequence\\_base](#) publicly, so that safe iterators (which inherit [\\_Safe\\_iterator\\_base](#)) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.

- class `_Safe_local_iterator_base`

### 5.158.1 Detailed Description

Base class that supports tracking of local iterators that reference an unordered container.

The `_Safe_unordered_container_base` class provides basic support for tracking iterators into an unordered container. Containers that track iterators must derived from `_Safe_unordered_container_base` publicly, so that safe iterators (which inherit `_Safe_iterator_base`) can attach to them. This class contains four linked lists of iterators, one for constant iterators, one for mutable iterators, one for constant local iterators, one for mutable local iterators and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* containers may fail to provide the exception-safety guarantees required by the C++ standard.

### 5.158.2 Constructor & Destructor Documentation

#### `~_Safe_unordered_container_base()`

```
__gnu_debug::_Safe_unordered_container_base::~~_Safe_unordered_container_base () [inline], [protected],
[noexcept]
```

Notify all iterators that reference this container that the container is being destroyed.

References `_M_detach_all()`.

### 5.158.3 Member Function Documentation

#### `_M_detach_all()`

```
void __gnu_debug::_Safe_unordered_container_base::_M_detach_all () const [protected]
```

Detach all iterators, leaving them singular.

Referenced by `~_Safe_unordered_container_base()`.

#### `_M_detach_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () const [protected], [inherited]
```

Detach all singular iterators.

## Postcondition

for all iterators *i* attached to this sequence, `i->_M_version == _M_version`.

### **`_M_get_mutex()`**

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex () const [protected], [noexcept], [inherited]
```

For use in `_Safe_sequence`.

### **`_M_revalidate_singular()`**

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () const [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

### **`_M_swap()` [1/2]**

```
void __gnu_debug::_Safe_sequence_base::_M_swap (const _Safe_sequence_base & __x) const [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### **`_M_swap()` [2/2]**

```
void __gnu_debug::_Safe_unordered_container_base::_M_swap (const _Safe_unordered_container_base & __x) const [protected], [noexcept]
```

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

## **5.158.4 Member Data Documentation**

### **`_M_const_iterators`**

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [mutable], [inherited]
```

The list of constant iterators that reference this container.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_unordered\\_container< \\_Container >::\\_M\\_invalidate\\_if\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_transfer\\_from\\_if\(\)](#).

### **`_M_const_local_iterators`**

```
_Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [mutable]
```

The list of constant local iterators that reference this container.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_unordered\\_container< \\_Container >::\\_M\\_invalidate\\_local\\_if\(\)](#).

### **`_M_iterators`**

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [mutable], [inherited]
```

The list of mutable iterators that reference this container.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_unordered\\_container< \\_Container >::\\_M\\_invalidate\\_if\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_transfer\\_from\\_if\(\)](#).

**`_M_local_iterators`**

`_Safe_iterator_base*` `__gnu_debug::_Safe_unordered_container_base::_M_local_iterators` [mutable]

The list of mutable local iterators that reference this container.

Referenced by `__gnu_debug::Safe_unordered_container<_Container>::_M_invalidate_local_if()`.

**`_M_version`**

`unsigned int` `__gnu_debug::_Safe_sequence_base::_M_version` [mutable], [inherited]

The container version number. This number may never be 0.

Referenced by `_M_invalidate_all()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`, `__gnu_debug::Safe_local_iterator<_OtherIterator, _UContainer>` and `__gnu_debug::Safe_local_iterator<_OtherIterator, _UContainer>::operator=()`.

The documentation for this class was generated from the following file:

- [safe\\_unordered\\_base.h](#)

## 5.159 `__gnu_debug::Safe_vector<_SafeSequence, _BaseSequence>` Class Template Reference

```
#include <vector>
```

Inheritance diagram for `__gnu_debug::Safe_vector<_SafeSequence, _BaseSequence>`:

**Protected Member Functions**

- `constexpr Safe_vector` (`Safe_vector` && `x`) `noexcept`
- `constexpr Safe_vector` (`const Safe_vector` &) `noexcept`
- `constexpr Safe_vector` (`size_type` `n`) `noexcept`
- `bool` `_M_requires_reallocation` (`size_type` `elements`) `const noexcept`

- constexpr void **\_M\_update\_guaranteed\_capacity** () noexcept
- constexpr [\\_Safe\\_vector](#) & **operator=** ([\\_Safe\\_vector](#) &&\_\_x) noexcept
- constexpr [\\_Safe\\_vector](#) & **operator=** (const [\\_Safe\\_vector](#) &) noexcept

#### Protected Attributes

- size\_type **\_M\_guaranteed\_capacity**

#### 5.159.1 Detailed Description

```
template<typename _SafeSequence, typename _BaseSequence>
class __gnu_debug:: _Safe_vector< _SafeSequence, _BaseSequence >
```

Base class for Debug Mode vector.

Adds information about the guaranteed capacity, which is useful for detecting code which relies on non-portable implementation details of the libstdc++ reallocation policy.

The documentation for this class was generated from the following file:

- [debug/vector](#)

#### 5.160 [\\_\\_gnu\\_parallel::\\_SamplingSorter](#)< [\\_\\_stable](#), [\\_RAIter](#), [\\_StrictWeakOrdering](#) > Struct Template Reference

```
#include <multiway_merge.h>
```

#### Public Member Functions

- void **operator()** ([\\_RAIter](#) \_\_first, [\\_RAIter](#) \_\_last, [\\_StrictWeakOrdering](#) \_\_comp)

#### 5.160.1 Detailed Description

```
template<bool __stable, class _RAIter, class _StrictWeakOrdering>
struct __gnu_parallel:: _SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >
```

Stable sorting functor.

Used to reduce code instantiation in multiway\_merge\_sampling\_splitting.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

#### 5.161 [\\_\\_gnu\\_parallel::\\_SamplingSorter](#)< [false](#), [\\_RAIter](#), [\\_StrictWeakOrdering](#) > Struct Template Reference

```
#include <multiway_merge.h>
```

#### Public Member Functions

- void **operator()** ([\\_RAIter](#) \_\_first, [\\_RAIter](#) \_\_last, [\\_StrictWeakOrdering](#) \_\_comp)
- void **operator()** ([\\_RAIter](#) \_\_first, [\\_RAIter](#) \_\_last, [\\_StrictWeakOrdering](#) \_\_comp)

#### 5.161.1 Detailed Description

```
template<class _RAIter, class _StrictWeakOrdering>
struct __gnu_parallel:: _SamplingSorter< false, _RAIter, _StrictWeakOrdering >
```

Non-[\\_\\_stable](#) sorting functor.

Used to reduce code instantiation in multiway\_merge\_sampling\_splitting.  
The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.162 std::\_\_detail::\_Scanner<\_CharT> Class Template Reference

- [\\_StateT](#) **\_M\_state**
- [\\_TokenT](#) **\_M\_token**
- const [std::pair](#)< char, [\\_TokenT](#) > **\_M\_token\_tbl** [9]

### 5.162.1 Detailed Description

```
template<typename _CharT>
class std::__detail::_Scanner< _CharT >
```

Scans an input range for regex tokens.

The `_Scanner` class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.

### 5.162.2 Member Enumeration Documentation

#### `_TokenT`

```
enum std::__detail::_ScannerBase::_TokenT : unsigned [inherited]
```

Token types returned from the scanner.

The documentation for this class was generated from the following files:

- [regex\\_scanner.h](#)
- [regex\\_scanner.tcc](#)

## 5.163 `__gnu_debug::_Sequence_traits`< `_Sequence` > Struct Template Reference

```
#include <safe_iterator.h>
```

### Public Types

- typedef `_Distance_traits`< typename `_Sequence::iterator` > **\_DistTraits**

### Static Public Member Functions

- static [\\_DistTraits::\\_\\_type](#) **\_S\_size** (const `_Sequence` &\_\_seq)

### 5.163.1 Detailed Description

```
template<typename _Sequence>
struct __gnu_debug::_Sequence_traits< _Sequence >
```

Sequence traits giving the size of a container if possible.

The documentation for this struct was generated from the following file:

- [safe\\_iterator.h](#)

## 5.164 `__gnu_parallel::_Settings` Struct Reference

```
#include <settings.h>
```

**Static Public Member Functions**

### 5.164.1 Detailed Description

class `_Settings` Run-time settings for the parallel mode including all tunable parameters.

### 5.164.2 Member Function Documentation

#### `get()`

```
static const \_Settings & __gnu_parallel::_Settings::get () throw ( ) [static]
```

Get the global settings.

Referenced by [\\_\\_gnu\\_parallel::\\_find\\_template\(\)](#), [\\_\\_gnu\\_parallel::\\_find\\_template\(\)](#), [\\_\\_gnu\\_parallel::\\_find\\_template\(\)](#), [\\_\\_gnu\\_parallel::\\_for\\_each\\_template\\_random\\_access\\_workstealing\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_nth\\_element\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_partial\\_sum\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_partial\\_sum\\_linear\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_partition\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_random\\_shuffle\\_drs\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_parallel\\_sort\\_qs\\_conquer\(\)](#), [\\_\\_gnu\\_parallel::\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#), [\\_\\_gnu\\_parallel::\\_sequential\\_random\\_s](#), [\\_\\_gnu\\_parallel::multiway\\_merge\\_sampling\\_splitting\(\)](#), [\\_\\_gnu\\_parallel::parallel\\_multiway\\_merge\(\)](#), [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\(\)](#), and [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\\_pu\(\)](#).

#### `set()`

```
static void __gnu_parallel::_Settings::set ( \_Settings & ) throw ( ) [static]
```

Set the global settings.

References [accumulate\\_minimal\\_n](#), [adjacent\\_difference\\_minimal\\_n](#), [cache\\_line\\_size](#), [count\\_minimal\\_n](#), [fill\\_minimal\\_n](#), [find\\_increasing\\_factor](#), [find\\_initial\\_block\\_size](#), [find\\_maximum\\_block\\_size](#), [find\\_scale\\_factor](#), [find\\_sequential\\_search\\_size](#), [for\\_each\\_minimal\\_n](#), [generate\\_minimal\\_n](#), [L1\\_cache\\_size](#), [L2\\_cache\\_size](#), [max\\_element\\_minimal\\_n](#), [merge\\_minimal\\_n](#), [merge\\_oversampling](#), [min\\_element\\_minimal\\_n](#), [multiway\\_merge\\_minimal\\_k](#), [multiway\\_merge\\_minimal\\_n](#), [multiway\\_merge\\_oversampling](#), [nth\\_element\\_minimal\\_n](#), [partial\\_sort\\_minimal\\_n](#), [partial\\_sum\\_dilation](#), [partial\\_sum\\_minimal\\_n](#), [partition\\_chunk\\_share](#), [partition\\_chunk\\_size](#), [partition\\_minimal\\_n](#), [qsb\\_steals](#), [random\\_shuffle\\_minimal\\_n](#), [replace\\_minimal\\_n](#), [search\\_minimal\\_n](#), [set\(\)](#), [set\\_difference\\_minimal\\_n](#), [set\\_intersection\\_minimal\\_n](#), [set\\_symmetric\\_difference\\_minimal\\_n](#), [set\\_union\\_minimal\\_n](#), [sort\\_minimal\\_n](#), [sort\\_mwms\\_oversampling](#), [sort\\_qs\\_num\\_samples\\_preset](#), [sort\\_qsb\\_base\\_case\\_maximal\\_n](#), [TLB\\_size](#), [transform\\_minimal\\_n](#), and [unique\\_copy\\_minimal\\_n](#).

Referenced by [set\(\)](#).

### 5.164.3 Member Data Documentation

#### `accumulate_minimal_n`

```
\_SequenceIndex __gnu_parallel::_Settings::accumulate_minimal_n
```

Minimal input size for accumulate.

Referenced by [set\(\)](#).

#### `adjacent_difference_minimal_n`

```
unsigned int __gnu_parallel::_Settings::adjacent_difference_minimal_n
```

Minimal input size for adjacent\_difference.

Referenced by [set\(\)](#).

**cache\_line\_size**

```
unsigned int __gnu_parallel::_Settings::cache_line_size
```

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_for\\_each\\_template\\_random\\_access\\_workstealing\(\)](#), and [set\(\)](#).

**count\_minimal\_n**

```
\_SequenceIndex __gnu_parallel::_Settings::count_minimal_n
```

Minimal input size for count and count\_if.

Referenced by [set\(\)](#).

**fill\_minimal\_n**

```
\_SequenceIndex __gnu_parallel::_Settings::fill_minimal_n
```

Minimal input size for fill.

Referenced by [set\(\)](#).

**find\_increasing\_factor**

```
double __gnu_parallel::_Settings::find_increasing_factor
```

Block size increase factor for find.

Referenced by [set\(\)](#).

**find\_initial\_block\_size**

```
\_SequenceIndex __gnu_parallel::_Settings::find_initial_block_size
```

Initial block size for find.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_find\\_template\(\)](#), and [set\(\)](#).

**find\_maximum\_block\_size**

```
\_SequenceIndex __gnu_parallel::_Settings::find_maximum_block_size
```

Maximal block size for find.

Referenced by [set\(\)](#).

**find\_scale\_factor**

```
float __gnu_parallel::_Settings::find_scale_factor
```

Block size scale-down factor with respect to current position.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_find\\_template\(\)](#), and [set\(\)](#).

**find\_sequential\_search\_size**

```
\_SequenceIndex __gnu_parallel::_Settings::find_sequential_search_size
```

Start with looking for this many elements sequentially, for find.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_find\\_template\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_find\\_template\(\)](#), and [set\(\)](#).

**for\_each\_minimal\_n**

```
\_SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n
```

Minimal input size for for\_each.

Referenced by [set\(\)](#).

**generate\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::generate_minimal_n`

Minimal input size for generate.

Referenced by [set\(\)](#).

**L1\_cache\_size**

`unsigned long long __gnu_parallel::_Settings::L1_cache_size`

size of the L1 cache in bytes (underestimation).

Referenced by [set\(\)](#).

**L2\_cache\_size**

`unsigned long long __gnu_parallel::_Settings::L2_cache_size`

size of the L2 cache in bytes (underestimation).

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_sequential\\_random\\_shuffle\(\)](#), and [set\(\)](#).

**max\_element\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for max\_element.

Referenced by [set\(\)](#).

**merge\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::merge_minimal_n`

Minimal input size for merge.

Referenced by [set\(\)](#).

**merge\_oversampling**

`unsigned int __gnu_parallel::_Settings::merge_oversampling`

Oversampling factor for merge.

Referenced by [\\_\\_gnu\\_parallel::multiway\\_merge\\_sampling\\_splitting\(\)](#), [\\_\\_gnu\\_parallel::parallel\\_multiway\\_merge\(\)](#), and [set\(\)](#).

**min\_element\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::min_element_minimal_n`

Minimal input size for min\_element.

Referenced by [set\(\)](#).

**multiway\_merge\_minimal\_k**

`int __gnu_parallel::_Settings::multiway_merge_minimal_k`

Oversampling factor for multiway\_merge.

Referenced by [set\(\)](#).

**multiway\_merge\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::multiway_merge_minimal_n`

Minimal input size for multiway\_merge.

Referenced by [set\(\)](#).

**multiway\_merge\_oversampling**

`unsigned int __gnu_parallel::_Settings::multiway_merge_oversampling`

Oversampling factor for `multiway_merge`.

Referenced by [set\(\)](#).

**nth\_element\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::nth_element_minimal_n`

Minimal input size for `nth_element`.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_nth\\_element\(\)](#), and [set\(\)](#).

**partial\_sort\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::partial_sort_minimal_n`

Minimal input size for `partial_sort`.

Referenced by [set\(\)](#).

**partial\_sum\_dilation**

`float __gnu_parallel::_Settings::partial_sum_dilation`

Ratio for `partial_sum`. Assume "sum and write result" to be this factor slower than just "sum".

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_partial\\_sum\\_linear\(\)](#), and [set\(\)](#).

**partial\_sum\_minimal\_n**

`unsigned int __gnu_parallel::_Settings::partial_sum_minimal_n`

Minimal input size for `partial_sum`.

Referenced by [set\(\)](#).

**partition\_chunk\_share**

`double __gnu_parallel::_Settings::partition_chunk_share`

Chunk size for partition, relative to input size. If  $> 0.0$ , this value overrides `partition_chunk_size`.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_partition\(\)](#), and [set\(\)](#).

**partition\_chunk\_size**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::partition_chunk_size`

Chunk size for partition.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_partition\(\)](#), and [set\(\)](#).

**partition\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::partition_minimal_n`

Minimal input size for partition.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_nth\\_element\(\)](#), and [set\(\)](#).

**qsb\_steals**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::qsb_steals`

The number of stolen ranges in load-balanced quicksort.

Referenced by [set\(\)](#).

**random\_shuffle\_minimal\_n**

unsigned int \_\_gnu\_parallel::\_Settings::random\_shuffle\_minimal\_n

Minimal input size for random\_shuffle.

Referenced by [set\(\)](#).

**replace\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::replace\_minimal\_n

Minimal input size for replace and replace\_if.

Referenced by [set\(\)](#).

**search\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::search\_minimal\_n

Minimal input size for search and search\_n.

Referenced by [set\(\)](#).

**set\_difference\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::set\_difference\_minimal\_n

Minimal input size for set\_difference.

Referenced by [set\(\)](#).

**set\_intersection\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::set\_intersection\_minimal\_n

Minimal input size for set\_intersection.

Referenced by [set\(\)](#).

**set\_symmetric\_difference\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::set\_symmetric\_difference\_minimal\_n

Minimal input size for set\_symmetric\_difference.

Referenced by [set\(\)](#).

**set\_union\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::set\_union\_minimal\_n

Minimal input size for set\_union.

Referenced by [set\(\)](#).

**sort\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::sort\_minimal\_n

Minimal input size for parallel sorting.

Referenced by [set\(\)](#).

**sort\_mwms\_oversampling**

unsigned int \_\_gnu\_parallel::\_Settings::sort\_mwms\_oversampling

Oversampling factor for parallel std::sort (MWMS).

Referenced by [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\(\)](#), [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\\_pu\(\)](#), and [set\(\)](#).

**sort\_qs\_num\_samples\_preset**

unsigned int \_\_gnu\_parallel::\_Settings::sort\_qs\_num\_samples\_preset

Such many samples to take to find a good pivot (quicksort).

Referenced by [set\(\)](#).

**sort\_qsb\_base\_case\_maximal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::sort\_qsb\_base\_case\_maximal\_n

Maximal subsequence \_\_length to switch to unbalanced \_\_base case. Applies to std::sort with dynamically load-balanced quicksort.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#), and [set\(\)](#).

**TLB\_size**

unsigned int \_\_gnu\_parallel::\_Settings::TLB\_size

size of the Translation Lookaside Buffer (underestimation).

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_sequential\\_random\\_shuffle\(\)](#), and [set\(\)](#).

**transform\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::transform\_minimal\_n

Minimal input size for parallel std::transform.

Referenced by [set\(\)](#).

**unique\_copy\_minimal\_n**

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::unique\_copy\_minimal\_n

Minimal input size for unique\_copy.

Referenced by [set\(\)](#).

**Static Public Member Functions**

- static \_Tp & [\\_S\\_get](#) (\_Sp\_ebo\_helper &\_\_eboh)

**5.165.1 Detailed Description**

template<int \_Nm, typename \_Tp>

struct std::\_Sp\_ebo\_helper<\_Nm, \_Tp, false >

Specialization not using EBO.

The documentation for this struct was generated from the following file:

- [shared\\_ptr\\_base.h](#)

### 5.166 `std::_Sp_ebo_helper<_Nm, _Tp, true >` Struct Template Reference

```
#include <shared_ptr_base.h>
```

#### Public Member Functions

- `_Sp_ebo_helper` (`_Tp &&__tp`)
- `_Sp_ebo_helper` (`const _Tp &__tp`)

#### Static Public Member Functions

- `static _Tp &_S_get` (`_Sp_ebo_helper &__eboh`)

#### 5.166.1 Detailed Description

```
template<int _Nm, typename _Tp>
struct std::_Sp_ebo_helper<_Nm, _Tp, true >
```

Specialization using EBO.

The documentation for this struct was generated from the following file:

- [shared\\_ptr\\_base.h](#)

### 5.167 `__gnu_parallel::SplitConsistently<__exact, _RAlter, _Compare, _SortingPlacesIterator >` Struct Template Reference

```
#include <multiway_mergesort.h>
```

#### 5.167.1 Detailed Description

```
template<bool __exact, typename _RAlter, typename _Compare, typename _SortingPlacesIterator>
struct __gnu_parallel::SplitConsistently<__exact, _RAlter, _Compare, _SortingPlacesIterator >
```

Split consistently.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

### 5.168 `__gnu_parallel::SplitConsistently<false, _RAlter, _Compare, _SortingPlacesIterator >` Struct Template Reference

```
#include <multiway_mergesort.h>
```

#### Public Member Functions

- `void operator()` (`const _ThreadIndex __iam, _PMWSSortingData<_RAlter > *__sd, _Compare &__comp, const typename std::iterator_traits<_RAlter >::difference_type __num_samples`) `const`

#### 5.168.1 Detailed Description

```
template<typename _RAlter, typename _Compare, typename _SortingPlacesIterator>
struct __gnu_parallel::SplitConsistently<false, _RAlter, _Compare, _SortingPlacesIterator >
```

Split by sampling.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.169 `__gnu_parallel::SplitConsistently< true, _RAIter, _Compare, _SortingPlacesIterator > Struct` Template Reference

```
#include <multiway_mergesort.h>
```

### Public Member Functions

- void **operator()** (const [\\_ThreadIndex](#) \_\_iam, [\\_PMWMSortingData](#)< \_RAIter > \*\_\_sd, \_Compare &\_\_comp, const typename [std::iterator\\_traits](#)< \_RAIter >::difference\_type \_\_num\_samples) const

#### 5.169.1 Detailed Description

```
template<typename _RAIter, typename _Compare, typename _SortingPlacesIterator>
struct __gnu_parallel::SplitConsistently< true, _RAIter, _Compare, _SortingPlacesIterator >
```

Split by exact splitting.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.170 `std::__detail::StateSeq< _TraitsT > Class` Template Reference

```
#include <regex_automaton.h>
```

### Public Types

- typedef `_NFA< _TraitsT > _RegexT`

### Public Member Functions

- `_StateSeq` (`_RegexT &__nfa, _StateIdT __s`)
- `_StateSeq` (`_RegexT &__nfa, _StateIdT __s, _StateIdT __end`)
- void `_M_append` (`_StateIdT __id`)
- void `_M_append` (const [\\_StateSeq](#) &\_\_s)
- `_StateSeq` `_M_clone` ()

### Public Attributes

- `_StateIdT` `_M_end`
- `_RegexT` & `_M_nfa`
- `_StateIdT` `_M_start`

#### 5.170.1 Detailed Description

```
template<typename _TraitsT>
class std::__detail::StateSeq< _TraitsT >
```

Describes a sequence of one or more `_State`, its current start and end(s). This structure contains fragments of an NFA during construction.

The documentation for this class was generated from the following files:

- [regex\\_automaton.h](#)
- [regex\\_automaton.tcc](#)

## 5.171 `__gnu_cxx::Std_pointer_impl< _Tp > Class` Template Reference

```
#include <pointer.h>
```

## Public Types

- typedef `_Tp` **element\_type**

## Public Member Functions

- `_Tp * get () const`
- `bool operator< (const \_Std\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Std\_pointer\_impl &__rarg) const`
- `void set (element_type *__arg)`

### 5.171.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_Std_pointer_impl< _Tp >
```

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

A `_Storage_policy` is required to provide 4 things: 1) A `get()` API for returning the stored pointer value. 2) An `set()` API for storing a pointer value. 3) An `element_type` typedef to define the type this points to. 4) An `operator<()` to support pointer comparison. 5) An `operator==()` to support pointer comparison.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.172 `__gnu_cxx::Temporary_buffer<_ForwardIterator, _Tp >` Class Template Reference

```
#include <stl_tempbuf.h>
```

Inheritance diagram for `__gnu_cxx::Temporary_buffer<_ForwardIterator, _Tp >`:

## Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef `_Tp` **value\_type**

## Public Member Functions

- `_Temporary_buffer` (`_ForwardIterator __seed`, `size_type __original_len`)
- `size_type _M_requested_size` () const
- iterator `begin` ()
- iterator `end` ()
- `size_type size` () const

## Protected Attributes

- struct `std::__Temporary_buffer::__Impl _M_impl`
- `size_type _M_original_len`

### 5.172.1 Detailed Description

```
template<typename _ForwardIterator, typename _Tp>
class __gnu_cxx::__Temporary_buffer<_ForwardIterator, _Tp>
```

This class is used in two places: `stl_algo.h` and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See `temporary_buffer` docs for more notes.

### 5.172.2 Constructor & Destructor Documentation

#### `_Temporary_buffer()`

```
template<typename _ForwardIterator, typename _Tp>
std::__Temporary_buffer<_ForwardIterator, _Tp>::__Temporary_buffer (
    _ForwardIterator __seed,
    size_type __original_len)
```

Constructs a temporary buffer of a size somewhere between zero and the given length.

### 5.172.3 Member Function Documentation

#### `_M_requested_size()`

```
template<typename _ForwardIterator, typename _Tp>
size_type std::__Temporary_buffer<_ForwardIterator, _Tp>::_M_requested_size () const [inline]
```

Returns the size requested by the constructor; may be `>size()`.

#### `begin()`

```
template<typename _ForwardIterator, typename _Tp>
iterator std::__Temporary_buffer<_ForwardIterator, _Tp>::begin () [inline]
```

As per Table mumble.

#### `end()`

```
template<typename _ForwardIterator, typename _Tp>
iterator std::__Temporary_buffer<_ForwardIterator, _Tp>::end () [inline]
```

As per Table mumble.

#### `size()`

```
template<typename _ForwardIterator, typename _Tp>
size_type std::__Temporary_buffer<_ForwardIterator, _Tp>::size () const [inline]
```

As per Table mumble.

The documentation for this class was generated from the following file:

- [stl\\_tempbuf.h](#)

### 5.173 std::\_Temporary\_buffer<\_ForwardIterator, \_Tp> Class Template Reference

```
#include <stl_tempbuf.h>
```

Inheritance diagram for std::\_Temporary\_buffer<\_ForwardIterator, \_Tp>:

#### Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef \_Tp **value\_type**

#### Public Member Functions

- [\\_Temporary\\_buffer](#) (\_ForwardIterator \_\_seed, size\_type \_\_original\_len)
- size\_type [\\_M\\_requested\\_size](#) () const
- iterator [begin](#) ()
- iterator [end](#) ()
- size\_type [size](#) () const

#### Protected Attributes

- struct std::\_Temporary\_buffer::\_Impl **\_M\_impl**
- size\_type **\_M\_original\_len**

#### 5.173.1 Detailed Description

```
template<typename _ForwardIterator, typename _Tp>
class std::_Temporary_buffer<_ForwardIterator, _Tp>
```

This class is used in two places: `stl_algo.h` and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See [temporary\\_buffer](#) docs for more notes.

### 5.173.2 Constructor & Destructor Documentation

#### `_Temporary_buffer()`

```
template<typename _ForwardIterator, typename _Tp>
std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer (
    _ForwardIterator __seed,
    size_type __original_len)
```

Constructs a temporary buffer of a size somewhere between zero and the given length.

References [begin\(\)](#), and [end\(\)](#).

### 5.173.3 Member Function Documentation

#### `_M_requested_size()`

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::_M_requested_size () const [inline]
```

Returns the size requested by the constructor; may be `>size()`.

#### `begin()`

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin () [inline]
```

As per Table mumble.

Referenced by [\\_Temporary\\_buffer\(\)](#).

#### `end()`

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end () [inline]
```

As per Table mumble.

Referenced by [\\_Temporary\\_buffer\(\)](#).

#### `size()`

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size () const [inline]
```

As per Table mumble.

The documentation for this class was generated from the following file:

- [stl\\_tempbuf.h](#)

## 5.174 `__gnu_cxx::Unqualified_type<_Tp>` Struct Template Reference

```
#include <pointer.h>
```

### Public Types

- `typedef _Tp type`

### 5.174.1 Detailed Description

```
template<typename _Tp>
struct __gnu_cxx::Unqualified_type< _Tp >
```

This structure accommodates the way in which `std::iterator_traits<>` is normally specialized for `const T*`, so that `value_type` is still `T`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

### 5.175 std::\_Vector\_base< \_Tp, \_Alloc > Struct Template Reference

```
#include <stl_vector.h>
```

Inheritance diagram for std::\_Vector\_base< \_Tp, \_Alloc >:

**Public Types**

- typedef [\\_\\_gnu\\_cxx::\\_\\_alloc\\_traits](#)<\_Alloc>::template rebind<\_Tp>::other **\_Tp\_alloc\_type**
- typedef \_Alloc **allocator\_type**
- typedef [\\_\\_gnu\\_cxx::\\_\\_alloc\\_traits](#)<\_Tp\_alloc\_type>::pointer **pointer**

**Public Member Functions**

- constexpr **\_Vector\_base** (\_Tp\_alloc\_type &&\_\_a) noexcept
- **\_Vector\_base** (\_Vector\_base &&)=default
- constexpr **\_Vector\_base** (\_Vector\_base &&\_\_x, const allocator\_type &\_\_a)
- constexpr **\_Vector\_base** (const allocator\_type &\_\_a) noexcept
- constexpr **\_Vector\_base** (const allocator\_type &\_\_a, [\\_Vector\\_base](#) &&\_\_x)
- constexpr **\_Vector\_base** (size\_t \_\_n)
- constexpr **\_Vector\_base** (size\_t \_\_n, const allocator\_type &\_\_a)
- constexpr pointer **\_M\_allocate** (size\_t \_\_n)
- constexpr void **\_M\_deallocate** (pointer \_\_p, size\_t \_\_n)
- constexpr const \_Tp\_alloc\_type & **\_M\_get\_Tp\_allocator** () const noexcept
- constexpr \_Tp\_alloc\_type & **\_M\_get\_Tp\_allocator** () noexcept
- constexpr allocator\_type **get\_allocator** () const noexcept

**Public Attributes**

- [\\_Vector\\_impl](#) **\_M\_impl**

**Protected Member Functions**

- constexpr void **\_M\_create\_storage** (size\_t \_\_n)

**5.175.1 Detailed Description**

template<typename \_Tp, typename \_Alloc>

struct std::\_Vector\_base<\_Tp, \_Alloc>

See bits/stl\_deque.h's \_Deque\_base for an explanation.

The documentation for this struct was generated from the following file:

- [stl\\_vector.h](#)

**5.176 std::add\_const<\_Tp> Struct Template Reference**

```
#include <type_traits>
```

**Public Types**

- using **type**

**5.176.1 Detailed Description**

template<typename \_Tp>

struct std::add\_const<\_Tp>

add\_const

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.177 `std::add_cv<_Tp>` Struct Template Reference

```
#include <type_traits>
```

#### Public Types

- using `type`

#### 5.177.1 Detailed Description

```
template<typename _Tp>  
struct std::add_cv<_Tp>
```

`add_cv`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.178 `std::add_lvalue_reference<_Tp>` Struct Template Reference

```
#include <type_traits>
```

#### Public Types

- using `type`

#### 5.178.1 Detailed Description

```
template<typename _Tp>  
struct std::add_lvalue_reference<_Tp>
```

`add_lvalue_reference`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.179 `std::add_pointer<_Tp>` Struct Template Reference

```
#include <type_traits>
```

#### Public Types

- using `type`

#### 5.179.1 Detailed Description

```
template<typename _Tp>  
struct std::add_pointer<_Tp>
```

`add_pointer`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.180 `std::add_rvalue_reference<_Tp>` Struct Template Reference

```
#include <type_traits>
```

**Public Types**

- using `type`

**5.180.1 Detailed Description**

```
template<typename _Tp>
struct std::add_rvalue_reference<_Tp>
```

`add_rvalue_reference`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.181 `std::add_volatile<_Tp>` Struct Template Reference**

```
#include <type_traits>
```

**Public Types**

- using `type`

**5.181.1 Detailed Description**

```
template<typename _Tp>
struct std::add_volatile<_Tp>
```

`add_volatile`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.182 `std::adopt_lock_t` Struct Reference**

```
#include <std_mutex.h>
```

**5.182.1 Detailed Description**

Assume the calling thread has already obtained mutex ownership and manage it.

The documentation for this struct was generated from the following file:

- [std\\_mutex.h](#)

**5.183 `std::aligned_storage<_Len, _Align>` Struct Template Reference**

```
#include <type_traits>
```

**5.183.1 Detailed Description**

```
template<size_t _Len, size_t _Align = __aligned_storage_default_alignment(_Len)>
struct std::aligned_storage<_Len, _Align>
```

Aligned storage.

The member typedef `type` is be a POD type suitable for use as uninitialized storage for any object whose size is at most `_Len` and whose alignment is a divisor of `_Align`.

It is important to use the nested `type` as uninitialized storage, not the `std::aligned_storage` type itself which is an empty class with 1-byte alignment. So this is correct:

```
typename std::aligned_storage<sizeof(X), alignof(X)>::type m_xobj;
```

This is wrong:

```
std::aligned_storage<sizeof(X), alignof(X)> m_xobj;
```

In C++14 and later `std::aligned_storage_t<sizeof(X), alignof(X)>` can be used to refer to the type member typedef.

The default value of `_Align` is supposed to be the most stringent fundamental alignment requirement for any C++ object type whose size is no greater than `_Len` (see [basic.align] in the C++ standard).

**Deprecated** Deprecated in C++23. Uses can be replaced by an array `std::byte[_Len]` declared with `alignas(_Align)`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.184 `std::aligned_union<_Len, _Types >` Struct Template Reference

```
#include <type_traits>
```

### Public Types

- using [type](#)

### Static Public Attributes

- static const size\_t [alignment\\_value](#)

#### 5.184.1 Detailed Description

```
template<size_t _Len, typename... _Types>
```

```
struct std::aligned_union<_Len, _Types >
```

Provide aligned storage for types.

[meta.trans.other]

Provides aligned storage for any of the provided types of at least size `_Len`.

See also

`aligned_storage`

**Deprecated** Deprecated in C++23.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.185 `std::alignment_of<_Tp >` Struct Template Reference

```
#include <type_traits>
```

#### 5.188.1 Detailed Description

**template<typename \_Alloc>**  
**struct std::allocator\_traits<\_Alloc >**

Uniform interface to all allocator types.

Since

C++11

#### 5.188.2 Member Typedef Documentation

##### **allocator\_type**

```
template<typename _Alloc>
typedef _Alloc std::allocator\_traits<_Alloc >::allocator_type
```

The allocator type.

##### **const\_pointer**

```
template<typename _Alloc>
using std::allocator\_traits<_Alloc >::const_pointer
```

The allocator's const pointer type.

[Alloc::const\\_pointer](#) if that type exists, otherwise [pointer\\_traits](#)<[pointer](#)>::rebind<const value\_type>

**const\_void\_pointer**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::const_void_pointer
```

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

**difference\_type**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::difference_type
```

The allocator's difference type.

`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference_type`

**is\_always\_equal**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::is_always_equal
```

Whether all instances of the allocator type compare equal.

`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

**pointer**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::pointer
```

The allocator's pointer type.

`Alloc::pointer` if that type exists, otherwise `value_type*`

**propagate\_on\_container\_copy\_assignment**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment
```

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

**propagate\_on\_container\_move\_assignment**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_move_assignment
```

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

**propagate\_on\_container\_swap**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_swap
```

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

**size\_type**

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::size_type
```

The allocator's size type.

`Alloc::size_type` if that type exists, otherwise `make_unsigned<difference_type>::type`

### value\_type

```
template<typename _Alloc>
typedef _Alloc::value_type std::allocator_traits< _Alloc >::value_type
```

The allocated type.

### void\_pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::void_pointer
```

The allocator's void pointer type.

`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

## 5.188.3 Member Function Documentation

### allocate() [1/2]

```
template<typename _Alloc>
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
    _Alloc & __a,
    size_type __n) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

### allocate() [2/2]

```
template<typename _Alloc>
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
    _Alloc & __a,
    size_type __n,
    const_void_pointer __hint) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

#### Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

**construct()**

```
template<typename _Alloc>
template<typename _Tp, typename... _Args>
requires __can_construct<_Alloc, _Tp, _Args...>
static constexpr void std::allocator_traits<_Alloc>::construct (
    _Alloc & __a,
    _Tp * __p,
    _Args &&... __args) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Tp`

**Parameters**

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed, otherwise uses placement-new to construct an object of type _Tp at location __p from the arguments __args...`

**deallocate()**

```
template<typename _Alloc>
static constexpr void std::allocator_traits<_Alloc>::deallocate (
    _Alloc & __a,
    pointer __p,
    size_type __n) [inline], [static], [constexpr]
```

Deallocate memory.

**Parameters**

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**destroy()**

```
template<typename _Alloc>
template<typename _Tp>
static constexpr void std::allocator_traits<_Alloc>::destroy (
    _Alloc & __a,
    _Tp * __p) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Tp`.

**Parameters**

<code>__a</code>	An allocator.
------------------	---------------

<code>__p</code>	Pointer to the object to destroy
------------------	----------------------------------

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~Tp()`

### **max\_size()**

```
template<typename _Alloc>
static constexpr size_type std::allocator_traits< _Alloc >::max_size (
    const _Alloc & __a) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

#### **Parameters**

<code>__a</code>	An allocator.
------------------	---------------

#### **Returns**

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

### **select\_on\_container\_copy\_construction()**

```
template<typename _Alloc>
static constexpr _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction (
    const _Alloc & __rhs) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

#### **Parameters**

<code>__rhs</code>	An allocator.
--------------------	---------------

#### **Returns**

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

The documentation for this struct was generated from the following file:

### 5.189.1 Detailed Description

```
template<typename _Tp>
struct std::allocator_traits< allocator< _Tp > >
```

Partial specialization for `std::allocator`

Since

C++11

See also

`std::allocator_traits`

### 5.189.2 Member Typedef Documentation

**allocator\_type** [1/2]

```
typedef allocator< _Tp > std::allocator_traits< allocator< _Tp > >::allocator_type
```

The allocator type.

**allocator\_type** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::allocator_type
```

The allocator type.

**const\_pointer** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::const_pointer
```

The allocator's const pointer type.

`Alloc::const_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const value_type>`

**const\_pointer** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::const_pointer
```

The allocator's const pointer type.

**const\_void\_pointer** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::const_void_pointer
```

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

**const\_void\_pointer** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::const_void_pointer
```

The allocator's const void pointer type.

**difference\_type** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::difference_type
```

The allocator's difference type.

`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference_type`

**difference\_type** [2/2]

```
template<typename _Tp>
```

```
using std::allocator_traits< allocator< _Tp > >::difference_type
```

The allocator's difference type.

**is\_always\_equal** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::is_always_equal
```

Whether all instances of the allocator type compare equal.

`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

**is\_always\_equal** [2/2]

```
template<typename _Tp>
```

```
using std::allocator_traits< allocator< _Tp > >::is_always_equal
```

Whether all instances of the allocator type compare equal.

**pointer** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::pointer
```

The allocator's pointer type.

`Alloc::pointer` if that type exists, otherwise `value_type*`

**pointer** [2/2]

```
template<typename _Tp>
```

```
using std::allocator_traits< allocator< _Tp > >::pointer
```

The allocator's pointer type.

**propagate\_on\_container\_copy\_assignment** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_copy_assignment
```

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

**propagate\_on\_container\_copy\_assignment** [2/2]

```
template<typename _Tp>
```

```
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_copy_assignment
```

How the allocator is propagated on copy assignment.

**propagate\_on\_container\_move\_assignment** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_move_assignment
```

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

**propagate\_on\_container\_move\_assignment** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_move_assignment
```

How the allocator is propagated on move assignment.

**propagate\_on\_container\_swap** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_swap
```

How the allocator is propagated on swap.  
Alloc::propagate\_on\_container\_swap if that type exists, otherwise false\_type

**propagate\_on\_container\_swap** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_swap
```

How the allocator is propagated on swap.

**size\_type** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::size_type
```

The allocator's size type.  
Alloc::size\_type if that type exists, otherwise make\_unsigned<difference\_type>::type

**size\_type** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::size_type
```

The allocator's size type.

**value\_type** [1/2]

```
typedef allocator< _Tp >::value_type std::allocator_traits< allocator< _Tp > >::value_type
```

The allocated type.

**value\_type** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::value_type
```

The allocated type.

**void\_pointer** [1/2]

```
using std::allocator_traits< allocator< _Tp > >::void_pointer
```

The allocator's void pointer type.  
Alloc::void\_pointer if that type exists, otherwise pointer\_traits<pointer>::rebind<void>

**void\_pointer** [2/2]

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::void_pointer
```

The allocator's void pointer type.

### 5.189.3 Member Function Documentation

#### allocate() [1/4]

```
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator< _Tp > & __a,
    size_type __n) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

##### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

#### allocate() [2/4]

```
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator< _Tp > & __a,
    size_type __n,
    const_void_pointer __hint) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

##### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

##### Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

#### allocate() [3/4]

```
template<typename _Tp>
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n) [inline], [static], [constexpr]
```

Allocate memory.

##### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

**allocate()** [4/4]

```
template<typename _Tp>
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n,
    const_void_pointer __hint) [inline], [static], [constexpr]
```

Allocate memory.

**Parameters**

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

**Returns**

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)`

**construct()** [1/2]

```
static constexpr void std::allocator_traits< allocator< _Tp > >::construct (
    allocator< _Tp > & __a,
    _Tp * __p,
    _Args &&... __args) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Tp`

**Parameters**

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed, otherwise uses placement-new to construct an object of type _Tp at location __p from the arguments __args...`

**construct()** [2/2]

```
template<typename _Tp>
template<typename _Up, typename... _Args>
static constexpr void std::allocator_traits< allocator< _Tp > >::construct (
    allocator_type & __a,
    _Up * __p,
    _Args &&... __args) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Up`

**Parameters**

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17. Changed in C++20 to call std::construct_at(__p, std::forward<_Args>(__args)...) instead. References std::_Construct(), and std::forward().`

**deallocate()** [1/2]

```
static constexpr void std::allocator_traits< allocator< _Tp > >::deallocate (
    allocator< _Tp > & __a,
    pointer __p,
    size_type __n) [inline], [static], [constexpr]
```

Deallocate memory.

**Parameters**

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**deallocate()** [2/2]

```
template<typename _Tp>
static constexpr void std::allocator_traits< allocator< _Tp > >::deallocate (
    allocator_type & __a,
    pointer __p,
    size_type __n) [inline], [static], [constexpr]
```

Deallocate memory.

**Parameters**

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**destroy()** [1/2]

```
static constexpr void std::allocator_traits< allocator< _Tp > >::destroy (
    allocator< _Tp > & __a,
    _Tp * __p) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Tp`.

## Parameters

$\_a$	An allocator.
$\_p$	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~Tp()`

**destroy()** [2/2]

```
template<typename _Tp>
template<typename _Up>
static constexpr void std::allocator_traits< allocator< _Tp > >::destroy (
    allocator_type & __a,
    _Up * __p) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Up`.

## Parameters

$\_a$	An allocator.
$\_p$	Pointer to the object to destroy

Calls `__a.destroy(__p)`.

**max\_size()** [1/2]

```
static constexpr size_type std::allocator_traits< allocator< _Tp > >::max_size (
    const allocator< _Tp > & __a) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

## Parameters

$\_a$	An allocator.
-------	---------------

## Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

**max\_size()** [2/2]

```
template<typename _Tp>
static constexpr size_type std::allocator_traits< allocator< _Tp > >::max_size (
    const allocator_type & __a) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

## Parameters

<code>_↔ _a</code>	An allocator.
------------------------	---------------

## Returns

`__a.max_size()`

**select\_on\_container\_copy\_construction()** [1/2]

```
static constexpr allocator< _Tp > std::allocator_traits< allocator< _Tp > >::select_on_container↔
_copy_construction (
    const allocator< _Tp > & __rhs) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

## Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

## Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

**select\_on\_container\_copy\_construction()** [2/2]

```
template<typename _Tp>
static constexpr allocator_type std::allocator_traits< allocator< _Tp > >::select_on_container↔
_copy_construction (
    const allocator_type & __rhs) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

## Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

## Returns

`__rhs`

### 5.190.1 Detailed Description

Explicit specialization for `std::allocator<void>`

Since

C++11

See also

`std::allocator_traits`

### 5.190.2 Member Typedef Documentation

#### **allocator\_type** [1/2]

```
typedef allocator< void > std::allocator_traits< allocator< void > >::allocator_type
```

The allocator type.

#### **allocator\_type** [2/2]

```
using std::allocator_traits< allocator< void > >::allocator_type
```

The allocator type.

#### **const\_pointer** [1/2]

```
using std::allocator_traits< allocator< void > >::const_pointer
```

The allocator's const pointer type.

`Alloc::const_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const value_type>`

#### **const\_pointer** [2/2]

```
using std::allocator_traits< allocator< void > >::const_pointer
```

The allocator's const pointer type.

#### **const\_void\_pointer** [1/2]

```
using std::allocator_traits< allocator< void > >::const_void_pointer
```

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

#### **const\_void\_pointer** [2/2]

```
using std::allocator_traits< allocator< void > >::const_void_pointer
```

The allocator's const void pointer type.

#### **difference\_type** [1/2]

```
using std::allocator_traits< allocator< void > >::difference_type
```

The allocator's difference type.

`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference_type`

#### **difference\_type** [2/2]

```
using std::allocator_traits< allocator< void > >::difference_type
```

The allocator's difference type.

**is\_always\_equal** [1/2]

```
using std::allocator_traits< allocator< void > >::is_always_equal
```

Whether all instances of the allocator type compare equal.

Alloc::is\_always\_equal if that type exists, otherwise is\_empty<Alloc>::type

**is\_always\_equal** [2/2]

```
using std::allocator_traits< allocator< void > >::is_always_equal
```

Whether all instances of the allocator type compare equal.

**pointer** [1/2]

```
using std::allocator_traits< allocator< void > >::pointer
```

The allocator's pointer type.

Alloc::pointer if that type exists, otherwise value\_type\*

**pointer** [2/2]

```
using std::allocator_traits< allocator< void > >::pointer
```

The allocator's pointer type.

**propagate\_on\_container\_copy\_assignment** [1/2]

```
using std::allocator_traits< allocator< void > >::propagate_on_container_copy_assignment
```

How the allocator is propagated on copy assignment.

Alloc::propagate\_on\_container\_copy\_assignment if that type exists, otherwise false\_type

**propagate\_on\_container\_copy\_assignment** [2/2]

```
using std::allocator_traits< allocator< void > >::propagate_on_container_copy_assignment
```

How the allocator is propagated on copy assignment.

**propagate\_on\_container\_move\_assignment** [1/2]

```
using std::allocator_traits< allocator< void > >::propagate_on_container_move_assignment
```

How the allocator is propagated on move assignment.

Alloc::propagate\_on\_container\_move\_assignment if that type exists, otherwise false\_type

**propagate\_on\_container\_move\_assignment** [2/2]

```
using std::allocator_traits< allocator< void > >::propagate_on_container_move_assignment
```

How the allocator is propagated on move assignment.

**propagate\_on\_container\_swap** [1/2]

```
using std::allocator_traits< allocator< void > >::propagate_on_container_swap
```

How the allocator is propagated on swap.

Alloc::propagate\_on\_container\_swap if that type exists, otherwise false\_type

**propagate\_on\_container\_swap** [2/2]

```
using std::allocator_traits< allocator< void > >::propagate_on_container_swap
```

How the allocator is propagated on swap.

**size\_type** [1/2]

```
using std::allocator_traits< allocator< void > >::size_type
```

The allocator's size type.

Alloc::size\_type if that type exists, otherwise make\_unsigned<difference\_type>::type

**size\_type** [2/2]

```
using std::allocator_traits< allocator< void > >::size_type
```

The allocator's size type.

**value\_type** [1/2]

```
typedef allocator< void >::value_type std::allocator_traits< allocator< void > >::value_type
```

The allocated type.

**value\_type** [2/2]

```
using std::allocator_traits< allocator< void > >::value_type
```

The allocated type.

**void\_pointer** [1/2]

```
using std::allocator_traits< allocator< void > >::void_pointer
```

The allocator's void pointer type.

Alloc::void\_pointer if that type exists, otherwise pointer\_traits<pointer>::rebind<void>

**void\_pointer** [2/2]

```
using std::allocator_traits< allocator< void > >::void_pointer
```

The allocator's void pointer type.

**5.190.3 Member Function Documentation****allocate()** [1/3]

```
static constexpr pointer std::allocator_traits< allocator< void > >::allocate (
    allocator< void > & __a,
    size_type __n) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

**Parameters**

 __a	An allocator.
 __n	The number of objects to allocate space for.

Calls a.allocate(n)

**allocate()** [2/3]

```
static constexpr pointer std::allocator_traits< allocator< void > >::allocate (
    allocator< void > & __a,
    size_type __n,
    const_void_pointer __hint) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

## Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

## Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

**allocate()** [3/3]

```
static void * std::allocator_traits< allocator< void > >::allocate (
    allocator_type & ,
    size_type ,
    const void * = nullptr) [static], [delete]
```

`allocate` is ill-formed for `allocator<void>`

**construct()** [1/2]

```
static constexpr void std::allocator_traits< allocator< void > >::construct (
    allocator< void > & __a,
    _Tp * __p,
    _Args &&... __args) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Tp`

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)`  if that expression is well-formed, otherwise uses placement-new to construct an object of type `_Tp` at location `__p` from the arguments `__args...`

**construct()** [2/2]

```
template<typename _Up, typename... _Args>
static constexpr void std::allocator_traits< allocator< void > >::construct (
    allocator_type & ,
    _Up * __p,
    _Args &&... __args) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Up`

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...)`  in C++11, C++14 and C++17. Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...)`  instead. References [std::\\_Construct\(\)](#), and [std::forward\(\)](#).

**deallocate()** [1/2]

```
static constexpr void std::allocator_traits< allocator< void > >::deallocate (
    allocator< void > & __a,
    pointer __p,
    size_type __n) [inline], [static], [constexpr]
```

Deallocate memory.

**Parameters**

$\leftarrow$ __a	An allocator.
$\leftarrow$ __p	Pointer to the memory to deallocate.
$\leftarrow$ __n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**deallocate()** [2/2]

```
static void std::allocator_traits< allocator< void > >::deallocate (
    allocator_type & ,
    void * ,
    size_type ) [static], [delete]
```

deallocate is ill-formed for `allocator<void>`

**destroy()** [1/2]

```
static constexpr void std::allocator_traits< allocator< void > >::destroy (
    allocator< void > & __a,
    _Tp * __p) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Tp`.

**Parameters**

$\leftarrow$ __a	An allocator.
$\leftarrow$ __p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

**destroy()** [2/2]

```
template<typename _Up>
static constexpr void std::allocator_traits< allocator< void > >::destroy (
    allocator_type & ,
    _Up * __p) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Up`

**Parameters**

$\leftarrow$ __a	An allocator.
---------------------	---------------

## Parameters

<code>__p</code>	Pointer to the object to destroy
------------------	----------------------------------

Invokes the destructor for `*__p`.

References [std::\\_Destroy\(\)](#).

**max\_size()** [1/2]

```
static constexpr size_type std::allocator_traits< allocator< void > >::max_size (
    const allocator< void > & __a) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

## Parameters

<code>__a</code>	An allocator.
------------------	---------------

## Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

**max\_size()** [2/2]

```
static size_type std::allocator_traits< allocator< void > >::max_size (
    const allocator_type & ) [static], [delete]
```

`max_size` is ill-formed for `allocator<void>`

**select\_on\_container\_copy\_construction()** [1/2]

```
static constexpr allocator< void > std::allocator_traits< allocator< void > >::select_on_
container_copy_construction (
    const allocator< void > & __rhs) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

## Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

## Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

**select\_on\_container\_copy\_construction()** [2/2]

```
static constexpr allocator_type std::allocator_traits< allocator< void > >::select_on_container_
_copy_construction (
    const allocator_type & __rhs) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

**Parameters**

<code>__rhs</code>	An allocator.
--------------------	---------------

**Returns**

`__rhs`

The documentation for this struct was generated from the following file:

**5.191.1 Detailed Description**

template<typename \_Tp>  
struct std::allocator\_traits< pmr::polymorphic\_allocator< \_Tp > >

Partial specialization for std::pmr::polymorphic\_allocator

Since

C++17

**5.191.2 Member Typedef Documentation**

**allocator\_type** [1/2]

```
typedef pmr::polymorphic_allocator< _Tp > std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocator_type
```

The allocator type.

**allocator\_type** [2/2]

```
template<typename _Tp>  
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocator_type
```

The allocator type.

**const\_pointer** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_pointer
```

The allocator's const pointer type.

Alloc::const\_pointer if that type exists, otherwise pointer\_traits<pointer>::rebind<const value\_type>

**const\_pointer** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_pointer
The allocator's const pointer type.
```

**const\_void\_pointer** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_void_pointer
The allocator's const void pointer type.
Alloc::const_void_pointer if that type exists, otherwise pointer_traits<pointer>::rebind<const
void>
```

**const\_void\_pointer** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_void_pointer
The allocator's const void pointer type.
```

**difference\_type** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::difference_type
The allocator's difference type.
Alloc::difference_type if that type exists, otherwise pointer_traits<pointer>::difference←
_type
```

**difference\_type** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::difference_type
The allocator's difference type.
```

**is\_always\_equal** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::is_always_equal
Whether all instances of the allocator type compare equal.
Alloc::is_always_equal if that type exists, otherwise is_empty<Alloc>::type
```

**is\_always\_equal** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::is_always_equal
Whether all instances of the allocator type compare equal.
```

**pointer** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::pointer
The allocator's pointer type.
Alloc::pointer if that type exists, otherwise value_type*
```

**pointer** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::pointer
The allocator's pointer type.
```

**propagate\_on\_container\_copy\_assignment** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_copy_↵
assignment
```

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

**propagate\_on\_container\_copy\_assignment** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_copy_↵
assignment
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

**propagate\_on\_container\_move\_assignment** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_move_↵
assignment
```

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

**propagate\_on\_container\_move\_assignment** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_move_↵
assignment
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

**propagate\_on\_container\_swap** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_swap
```

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

**propagate\_on\_container\_swap** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_swap
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

**size\_type** [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::size_type
```

The allocator's size type.

`Alloc::size_type` if that type exists, otherwise `make_unsigned<difference_type>::type`

**size\_type** [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::size_type
```

The allocator's size type.

**value\_type** [1/2]

```
typedef pmr::polymorphic_allocator< _Tp >::value_type std::allocator_traits< pmr::polymorphic_allocator<
_Tp > >::value_type
```

The allocated type.

#### value\_type [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::value_type
```

The allocated type.

#### void\_pointer [1/2]

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::void_pointer
```

The allocator's void pointer type.  
 Alloc::void\_pointer if that type exists, otherwise pointer\_traits<pointer>::rebind<void>

#### void\_pointer [2/2]

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::void_pointer
```

The allocator's void pointer type.

### 5.191.3 Member Function Documentation

#### allocate() [1/4]

```
template<typename _Tp>
static pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n) [inline], [static], [nodiscard]
```

Allocate memory.

##### Parameters

$\leftarrow$ __a	An allocator.
$\leftarrow$ __n	The number of objects to allocate space for.

Calls a.allocate(n).

#### allocate() [2/4]

```
template<typename _Tp>
static pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n,
    const_void_pointer ) [inline], [static], [nodiscard]
```

Allocate memory.

##### Parameters

$\leftarrow$ __a	An allocator.
$\leftarrow$ __n	The number of objects to allocate space for.

**Returns**

Memory of suitable size and alignment for *n* objects of type `value_type`.

The third parameter is ignored..

Returns `a.allocate(n)`.

**allocate()** [3/4]

```
static constexpr pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    pmr::polymorphic_allocator< _Tp > & __a,
    size_type __n) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

**Parameters**

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

**allocate()** [4/4]

```
static constexpr pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    pmr::polymorphic_allocator< _Tp > & __a,
    size_type __n,
    const_void_pointer __hint) [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

**Parameters**

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

**Returns**

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

**construct()** [1/2]

```
template<typename _Tp>
template<typename _Up, typename... _Args>
static void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::construct (
    allocator_type & __a,
    _Up * __p,
    _Args &&... __args) [inline], [static]
```

Construct an object of type `_Up`

**Parameters**

<code>__a</code>	An allocator.
------------------	---------------

## Parameters

<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17.`  
 Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...) instead.`  
 References [std::forward\(\)](#).

**construct()** [2/2]

```
static constexpr void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::construct (
    pmr::polymorphic_allocator< _Tp > & __a,
    _Tp * __p,
    _Args &&... __args) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Tp`

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed,`  
 otherwise uses placement-new to construct an object of type `_Tp` at location `__p` from the arguments `__args...`

**deallocate()** [1/2]

```
template<typename _Tp>
static void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::deallocate (
    allocator_type & __a,
    pointer __p,
    size_type __n) [inline], [static]
```

Deallocate memory.

## Parameters

<code>__↵ __a</code>	An allocator.
<code>__↵ __p</code>	Pointer to the memory to deallocate.
<code>__↵ __n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n).`

**deallocate()** [2/2]

```
static constexpr void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::deallocate (
    pmr::polymorphic_allocator< _Tp > & __a,
    pointer __p,
    size_type __n) [inline], [static], [constexpr]
```

Deallocate memory.

## Parameters

$\leftarrow$ _a	An allocator.
$\leftarrow$ _p	Pointer to the memory to deallocate.
$\leftarrow$ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**destroy()** [1/2]

```
template<typename _Tp>
template<typename _Up>
static constexpr void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::destroy (
    allocator_type & ,
    _Up * __p) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Up`

## Parameters

$\leftarrow$ _a	An allocator.
$\leftarrow$ _p	Pointer to the object to destroy

Calls `p->_Up()`.

**destroy()** [2/2]

```
static constexpr void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::destroy (
    pmr::polymorphic_allocator< _Tp > & __a,
    _Tp * __p) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Tp`.

## Parameters

$\leftarrow$ _a	An allocator.
$\leftarrow$ _p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

**max\_size()** [1/2]

```
template<typename _Tp>
static constexpr size_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::max_size
(
    const allocator_type & ) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

**Returns**

```
numeric_limits<size_t>::max() / sizeof(value_type)
```

**max\_size()** [2/2]

```
static constexpr size_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::max_size
(
    const pmr::polymorphic_allocator< _Tp > & __a) [inline], [static], [constexpr],
[noexcept]
```

The maximum supported allocation size.

**Parameters**

<code>__a</code>	An allocator.
------------------	---------------

**Returns**

```
__a.max_size() or numeric_limits<size_type>::max()
```

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

**select\_on\_container\_copy\_construction()** [1/2]

```
template<typename _Tp>
static allocator_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::select_on_
container_copy_construction (
    const allocator_type & ) [inline], [static], [noexcept]
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

**select\_on\_container\_copy\_construction()** [2/2]

```
static constexpr pmr::polymorphic_allocator< _Tp > std::allocator_traits< pmr::polymorphic_allocator<
_Tp > >::select_on_container_copy_construction (
    const pmr::polymorphic_allocator< _Tp > & __rhs) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

**Parameters**

<code>__rhs</code>	An allocator.
--------------------	---------------

**Returns**

```
__rhs.select_on_container_copy_construction() or __rhs
```

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

### 5.194.1 Detailed Description

Base class for checking address and label information about allocations. Create a `std::map` between the allocated address (`void*`) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size. The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

### 5.195.1 Detailed Description

A type-safe container of any type.

An `any` object's state is either empty or it stores a contained object of CopyConstructible type.

### 5.195.2 Constructor & Destructor Documentation

#### any() [1/5]

```
std::experimental::fundamentals_v1::any::any () [inline], [noexcept]
```

Default constructor, creates an empty object.

#### any() [2/5]

```
std::experimental::fundamentals_v1::any::any (
    const any & __other) [inline]
```

Copy constructor, copies the state of \_\_other.

#### any() [3/5]

```
std::experimental::fundamentals_v1::any::any (
    any && __other) [inline], [noexcept]
```

Move constructor, transfer the state from \_\_other.

#### Postcondition

\_\_other.empty() (this postcondition is a GNU extension)

#### any() [4/5]

```
template<typename _ValueType, typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if<is_constructible<_Tp, _ValueType && >::value, bool >::type = true>
```

```
std::experimental::fundamentals_v1::any::any (
    _ValueType && __value) [inline]
```

Construct with a copy of \_\_value as the contained object.

#### any() [5/5]

```
template<typename _ValueType, typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if<!is_constructible<_Tp, _ValueType && >::value, bool >::type = false>
```

```
std::experimental::fundamentals_v1::any::any (
    _ValueType && __value) [inline]
```

Construct with a copy of \_\_value as the contained object.

#### ~any()

```
std::experimental::fundamentals_v1::any::~any () [inline]
```

Destructor, calls clear()

### 5.195.3 Member Function Documentation

#### clear()

```
void std::experimental::fundamentals_v1::any::clear () [inline], [noexcept]
```

If not empty, destroy the contained object.

#### empty()

```
bool std::experimental::fundamentals_v1::any::empty () const [inline], [nodiscard], [noexcept]
```

Reports whether there is a contained object or not.

**operator=()** [1/3]

```
template<typename _ValueType>
enable_if_t<!is_same< any, decay_t< _ValueType > >::value, any & > std::experimental::fundamentals_v1::any::operator= (
    _ValueType && __rhs) [inline]
```

Store a copy of `__rhs` as the contained object.

**operator=()** [2/3]

```
any & std::experimental::fundamentals_v1::any::operator= (
    any && __rhs) [inline], [noexcept]
```

Move assignment operator.

**Postcondition**

`__rhs.empty()` (not guaranteed for other implementations)

**operator=()** [3/3]

```
any & std::experimental::fundamentals_v1::any::operator= (
    const any & __rhs) [inline]
```

Copy the state of another object.

**swap()**

```
void std::experimental::fundamentals_v1::any::swap (
    any & __rhs) [inline], [noexcept]
```

Exchange state with another object.

**type()**

```
const type_info & std::experimental::fundamentals_v1::any::type () const [inline], [noexcept]
```

The `typeid` of the contained object, or `typeid(void)` if empty.

**5.196.1 Detailed Description**

`template<typename _Tp, std::size_t _Nm>`

`struct std::array<_Tp, _Nm >`

A standard container for storing a fixed size sequence of elements.

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#).

Sets support random access iterators.

**Template Parameters**

<i>Tp</i>	Type of element. Required to be a complete type.
<i>Nm</i>	Number of elements.

The documentation for this struct was generated from the following file:

- [array](#)

- `void reset (element_type *__p=0) throw ()`

### 5.201.1 Detailed Description

`template<typename _Tp>  
class std::auto_ptr< _Tp >`

A simple smart pointer providing strict ownership semantics.  
The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the CopyConstructible requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the libstdc++ testsuite.  
`_GLIBCXX_RESOLVE_LIB_DEFECTS`

1. `auto_ptr<>` conversion issues These resolutions have all been incorporated.

**Deprecated** Deprecated in C++11, no longer in the standard since C++17. Use `unique_ptr` instead.

### 5.201.2 Member Typedef Documentation

#### `element_type`

`template<typename _Tp>  
typedef _Tp std::auto_ptr< _Tp >::element_type`  
The pointed-to type.

### 5.201.3 Constructor & Destructor Documentation

#### auto\_ptr() [1/4]

```
template<typename _Tp>
std::auto_ptr<_Tp>::auto_ptr (
    element_type * __p = 0) throw ( )    [inline], [explicit]
```

An auto\_ptr is usually constructed from a raw pointer.

##### Parameters

 __p	A pointer (defaults to NULL).
--	-------------------------------

This object now *owns* the object pointed to by \_\_p.  
Referenced by [auto\\_ptr\(\)](#), [auto\\_ptr\(\)](#), [operator=\(\)](#), and [operator=\(\)](#).

#### auto\_ptr() [2/4]

```
template<typename _Tp>
std::auto_ptr<_Tp>::auto_ptr (
    auto_ptr<_Tp> & __a) throw ( )    [inline]
```

An auto\_ptr can be constructed from another auto\_ptr.

##### Parameters

 __a	Another auto_ptr of the same type.
--	------------------------------------

This object now *owns* the object previously owned by \_\_a, which has given up ownership.  
References [auto\\_ptr\(\)](#).

#### auto\_ptr() [3/4]

```
template<typename _Tp>
template<typename _Tp1>
std::auto_ptr<_Tp>::auto_ptr (
    auto_ptr<_Tp1> & __a) throw ( )    [inline]
```

An auto\_ptr can be constructed from another auto\_ptr.

##### Parameters

 __a	Another auto_ptr of a different but related type.
--	---

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.  
This object now *owns* the object previously owned by \_\_a, which has given up ownership.  
References [auto\\_ptr\(\)](#).

#### ~auto\_ptr()

```
template<typename _Tp>
std::auto_ptr<_Tp>::~~auto_ptr ( )    [inline]
```

When the auto\_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get ()` is NULL), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if `_Tp::~~_Tp()` throws, but this is prohibited. [17.4.3.6]/2

**auto\_ptr()** [4/4]

```
template<typename _Tp>
std::auto_ptr< _Tp >::auto_ptr (
    auto_ptr_ref< element_type > __ref) throw ( )    [inline]
```

Automatic conversions.

These operations are supposed to convert an auto\_ptr into and from an auto\_ptr\_ref automatically as needed. This would allow constructs such as

```
auto_ptr<Derived> func_returning_auto_ptr(...);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(...);
```

But it doesn't work, and won't be fixed. For further details see <https://cplusplus.github.io/LWG/lwg-closed.html#463>

**5.201.4 Member Function Documentation****get()**

```
template<typename _Tp>
element_type * std::auto_ptr< _Tp >::get ( ) const throw ( )    [inline]
```

Bypassing the smart pointer.

**Returns**

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

**Note**

This auto\_ptr still owns the memory.

**operator\*()**

```
template<typename _Tp>
element_type & std::auto_ptr< _Tp >::operator* ( ) const throw ( )    [inline]
```

Smart pointer dereferencing.

If this auto\_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

**operator->()**

```
template<typename _Tp>
element_type * std::auto_ptr< _Tp >::operator-> ( ) const throw ( )    [inline]
```

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

**operator=()** [1/2]

```
template<typename _Tp>
auto_ptr & std::auto_ptr< _Tp >::operator= (
    auto_ptr< _Tp > & __a) throw ( )    [inline]
```

auto\_ptr assignment operator.

## Parameters

<code>__a</code>	Another <code>auto_ptr</code> of the same type.
------------------	---

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

References [auto\\_ptr\(\)](#), and [reset\(\)](#).

**operator=()** [2/2]

```
template<typename _Tp>
template<typename _Tp1>
auto_ptr & std::auto_ptr<_Tp>::operator= (
    auto_ptr<_Tp1> & __a) throw ( )    [inline]
auto_ptr assignment operator.
```

## Parameters

<code>__a</code>	Another <code>auto_ptr</code> of a different but related type.
------------------	--

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

References [auto\\_ptr\(\)](#), and [reset\(\)](#).

**release()**

```
template<typename _Tp>
element_type * std::auto_ptr<_Tp>::release ( ) throw ( )    [inline]
Bypassing the smart pointer.
```

## Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

## Note

This `auto_ptr` no longer owns the memory. When this object goes out of scope, nothing will happen.

**reset()**

```
template<typename _Tp>
void std::auto_ptr<_Tp>::reset (
    element_type * __p = 0) throw ( )    [inline]
```

Forcibly deletes the managed object.

## Parameters

<code>__p</code>	A pointer (defaults to NULL).
------------------	-------------------------------

This object now *owns* the object pointed to by `__p`. The previous object has been deleted.  
 Referenced by [operator=\(\)](#), and [operator=\(\)](#).

The documentation for this class was generated from the following files:

- [shared\\_ptr\\_base.h](#)
- [auto\\_ptr.h](#)

## 5.202 `std::auto_ptr_ref<_Tp1>` Struct Template Reference

```
#include <auto_ptr.h>
```

### Public Member Functions

- `auto_ptr_ref(_Tp1 *__p)`

### Public Attributes

- `_Tp1 * _M_ptr`

#### 5.202.1 Detailed Description

```
template<typename _Tp1>
struct std::auto_ptr_ref<_Tp1>
```

A wrapper class to provide `auto_ptr` with reference semantics. For example, an `auto_ptr` can be assigned (or constructed from) the result of a function which returns an `auto_ptr` by value.

All the `auto_ptr_ref` stuff should happen behind the scenes.

The documentation for this struct was generated from the following file:

- [auto\\_ptr.h](#)

## 5.203 `std::back_insert_iterator<_Container>` Class Template Reference

```
#include <stl_iterator.h>
```

Inheritance diagram for `std::back_insert_iterator<_Container>`:

## Public Types

- typedef `_Container` `container_type`
- using `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

## Public Member Functions

- constexpr `back_insert_iterator` (`_Container` &\_\_x)
- constexpr `back_insert_iterator` & `operator*` ()
- constexpr `back_insert_iterator` & `operator++` ()
- constexpr `back_insert_iterator` `operator++` (int)
- constexpr `back_insert_iterator` & `operator=` (const typename `_Container::value_type` &\_\_value)
- constexpr `back_insert_iterator` & `operator=` (typename `_Container::value_type` &&\_\_value)

## Protected Attributes

- `_Container` \* `container`

### 5.203.1 Detailed Description

`template<typename _Container>`  
**class** `std::back_insert_iterator<_Container>`

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using `push_back`.

Tip: Using the `back_inserter` function to create these iterators can save typing.

### 5.203.2 Member Typedef Documentation

#### `container_type`

```
template<typename _Container>
typedef _Container std::back_insert_iterator<_Container>::container_type
```

A nested typedef for the type of whatever container you used.

#### `iterator_category`

```
typedef output_iterator_tag std::iterator< output_iterator_tag, void, void, void, void >::iterator←
_category [inherited]
```

One of the [tag types](#).

#### `pointer`

```
typedef void std::iterator< output_iterator_tag, void, void, void, void >::pointer [inherited]
```

This type represents a pointer-to-value\_type.

#### `reference`

```
typedef void std::iterator< output_iterator_tag, void, void, void, void >::reference [inherited]
```

This type represents a reference-to-value\_type.

**value\_type**

typedef void `std::iterator`< `output_iterator_tag`, void, void, void, void >::value\_type [inherited]  
 The type "pointed to" by the iterator.

**5.203.3 Constructor & Destructor Documentation****back\_insert\_iterator()**

```
template<typename _Container>
std::back_insert_iterator< _Container >::back_insert_iterator (
    _Container & __x) [inline], [explicit], [constexpr]
```

The only way to create this iterator is with a container.

References `std::__addressof()`.

**5.203.4 Member Function Documentation****operator\*()**

```
template<typename _Container>
back_insert_iterator & std::back_insert_iterator< _Container >::operator* () [inline], [nodiscard],
[constexpr]
```

Simply returns `*this`.

**operator++() [1/2]**

```
template<typename _Container>
back_insert_iterator & std::back_insert_iterator< _Container >::operator++ () [inline], [constexpr]
```

Simply returns `*this`. (This iterator does not *move*.)

**operator++() [2/2]**

```
template<typename _Container>
back_insert_iterator std::back_insert_iterator< _Container >::operator++ (
    int ) [inline], [constexpr]
```

Simply returns `*this`. (This iterator does not *move*.)

**operator=()**

```
template<typename _Container>
back_insert_iterator & std::back_insert_iterator< _Container >::operator= (
    const typename _Container::value_type & __value) [inline], [constexpr]
```

**Parameters**

<code>__value</code>	An instance of whatever type <code>container_type::const_reference</code> is; presumably a reference-to-const T for <code>container&lt;T&gt;</code> .
----------------------	---

**Returns**

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

The documentation for this class was generated from the following file:

- [bits/stl\\_iterator.h](#)

## 5.204 std::bad\_alloc Class Reference

```
#include <new>
```

Inheritance diagram for std::bad\_alloc:

### Public Member Functions

- **bad\_alloc** (const [bad\\_alloc](#) &)=default
- **bad\_alloc** & **operator=** (const [bad\\_alloc](#) &)=default
- virtual const char \* **what** () const throw ()

#### 5.204.1 Detailed Description

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

#### 5.204.2 Member Function Documentation

##### **what()**

```
virtual const char * std::bad_alloc::what () const throw ( ) [virtual]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [new](#)

## 5.205 std::experimental::fundamentals\_v1::bad\_any\_cast Class Reference

```
#include <any>
```

Inheritance diagram for `std::experimental::fundamentals_v1::bad_any_cast`:

### Public Member Functions

- virtual const char \* [what](#) () const noexcept

#### 5.205.1 Detailed Description

Exception class thrown by a failed `any_cast`.

#### 5.205.2 Member Function Documentation

##### `what()`

```
virtual const char * std::experimental::fundamentals_v1::bad_any_cast::what () const [inline],  
[virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::bad\\_cast](#).

The documentation for this class was generated from the following file:

- [experimental/any](#)

### 5.206 std::bad\_cast Class Reference

```
#include <typeinfo>
```

Inheritance diagram for `std::bad_cast`:

### Public Member Functions

- virtual const char \* [what](#) () const noexcept

#### 5.206.1 Detailed Description

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

#### 5.206.2 Member Function Documentation

##### `what()`

```
virtual const char * std::bad_cast::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

Reimplemented in [std::experimental::fundamentals\\_v1::bad\\_any\\_cast](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.207 `std::bad_exception` Class Reference

```
#include <exception>
```

Inheritance diagram for `std::bad_exception`:

### Public Member Functions

- virtual const char \* [what](#) () const noexcept

#### 5.207.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

#### 5.207.2 Member Function Documentation

##### `what()`

```
virtual const char * std::bad_exception::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [exception](#)

### 5.208 `std::bad_function_call` Class Reference

```
#include <std_function.h>
```

Inheritance diagram for `std::bad_function_call`:

**Public Member Functions**

- `const char * what () const noexcept`

**5.208.1 Detailed Description**

Exception class thrown when class template function's operator() is called with an empty target.

**5.208.2 Member Function Documentation****what()**

```
const char * std::bad_function_call::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [std\\_function.h](#)

**5.209 std::experimental::fundamentals\_v1::bad\_optional\_access Class Reference**

```
#include <optional>
```

Inheritance diagram for `std::experimental::fundamentals_v1::bad_optional_access`:

**Public Member Functions**

- **bad\_optional\_access** (`const char *__arg`)
- `virtual const char * what () const noexcept`

**5.209.1 Detailed Description**

Exception class thrown when a disengaged optional object is dereferenced.

### 5.209.2 Member Function Documentation

#### what()

```
virtual const char * std::logic_error::what () const [virtual], [noexcept], [inherited]
```

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [experimental/optional](#)

### 5.210 std::bad\_typeid Class Reference

```
#include <typeinfo>
```

Inheritance diagram for std::bad\_typeid:

#### Public Member Functions

- virtual const char \* [what](#) () const noexcept

#### 5.210.1 Detailed Description

Thrown when a NULL pointer in a `typeid` expression is used.

#### 5.210.2 Member Function Documentation

##### what()

```
virtual const char * std::bad_typeid::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

### 5.211 std::bad\_weak\_ptr Class Reference

```
#include <shared_ptr_base.h>
```

Inheritance diagram for `std::bad_weak_ptr`:

### Public Member Functions

- virtual `char const * what () const` `noexcept`

#### 5.211.1 Detailed Description

Exception possibly thrown by `shared_ptr`.

#### 5.211.2 Member Function Documentation

##### `what()`

```
virtual char const * std::bad_weak_ptr::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [shared\\_ptr\\_base.h](#)

### 5.212 `__gnu_parallel::balanced_quicksort_tag` Struct Reference

```
#include <tags.h>
```

Inheritance diagram for `__gnu_parallel::balanced_quicksort_tag`:

### Public Member Functions

- **balanced\_quicksort\_tag** ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) **\_\_get\_num\_threads** ()
- void **set\_num\_threads** ([\\_ThreadIndex](#) \_\_num\_threads)

#### 5.212.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

#### 5.212.2 Member Function Documentation

##### `__get_num_threads()`

[\\_ThreadIndex](#) `__gnu_parallel::parallel_tag::__get_num_threads ()` [inline], [inherited]

Find out desired number of threads.

##### Returns

Desired number of threads.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#).

##### `set_num_threads()`

void `__gnu_parallel::parallel_tag::set_num_threads (`  
     [\\_ThreadIndex](#) \_\_num\_threads) [inline], [inherited]

Set the desired number of threads.

##### Parameters

<code>__num_threads</code>	Desired number of threads.
----------------------------	----------------------------

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.213 `__gnu_parallel::balanced_tag` Struct Reference

```
#include <tags.h>
```

Inheritance diagram for `__gnu_parallel::balanced_tag`:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- void [set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.213.1 Detailed Description

Recommends parallel execution using dynamic load-balancing at compile time.

#### 5.213.2 Member Function Documentation

##### `__get_num_threads()`

```
\_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads() [inline], [inherited]
```

Find out desired number of threads.

##### Returns

Desired number of threads.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#).

##### `set_num_threads()`

```
void __gnu_parallel::parallel_tag::set_num_threads(  
    \_ThreadIndex __num_threads) [inline], [inherited]
```

Set the desired number of threads.

##### Parameters

<code>__num_threads</code>	Desired number of threads.
----------------------------	----------------------------

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.214 `std::tr2::bases<_Tp>` Struct Template Reference

```
#include <type_traits>
```

### Public Types

- typedef `__reflection_typelist<__bases(_Tp)...>` **type**

#### 5.214.1 Detailed Description

```
template<typename _Tp>
struct std::tr2::bases<_Tp>
```

Sequence abstraction metafunctions for manipulating a typelist.

Enumerate all the base classes of a class. Form of a typelist.

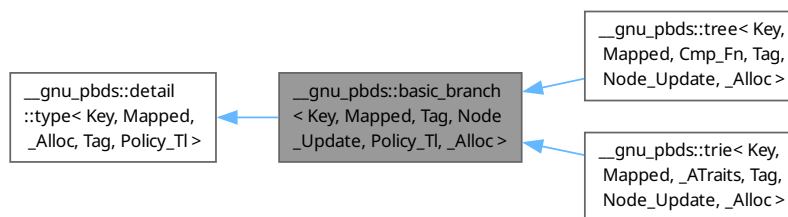

The documentation for this struct was generated from the following file:

- [tr2/type\\_traits](#)

## 5.215 `__gnu_pbds::basic_branch<Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc>` Class Template Reference

```
#include <assoc_container.hpp>
```

Inheritance diagram for `__gnu_pbds::basic_branch<Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc>`:

### Public Types

- typedef `Node_Update` **node\_update**

### Protected Member Functions

- **basic\_branch** (const [basic\\_branch](#) &other)
- template<typename T0>  
**basic\_branch** (T0 t0)
- template<typename T0, typename T1>  
**basic\_branch** (T0 t0, T1 t1)

**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5)
- `template<typename T0, typename T1, typename T2, typename T3, typename T4, typename T5, typename T6>`  
**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)

### 5.215.1 Detailed Description

`template<typename Key, typename Mapped, typename Tag, typename Node_Update, typename Policy_Tl, typename _Alloc>`

**class** `__gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >`

A branched, tree-like (tree, trie) container abstraction.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Tag</i>	Instantiating data structure type, see <code>container_tag</code> .
<i>Node_Update</i>	Updates nodes, restores invariants.
<i>Policy_Tl</i>	Policy typelist.
<i>_Alloc</i>	Allocator type.

Base is dispatched at compile time via `Tag`, from the following choices: `tree_tag`, `trie_tag`, and their descendants.

Base choices are: `detail::ov_tree_map`, `detail::rb_tree_map`, `detail::splay_tree_map`, and `detail::pat_trie_map`.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

## 5.216 `__gnu_pbds::basic_branch_tag` Struct Reference

```
#include <tag_and_trait.hpp>
```

Inheritance diagram for `__gnu_pbds::basic_branch_tag`:

### 5.216.1 Detailed Description

Basic branch structure.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.217 `std::basic_filebuf<_CharT, _Traits>` Class Template Reference

```
#include <fstream>
```

Inheritance diagram for `std::basic_filebuf<_CharT, _Traits>`:

### Public Types

- typedef `codecvt< char_type, char, __state_type > __codecvt_type`

#### Friends

- `class ios_base`

#### 5.217.1 Detailed Description

```
template<typename _CharT, typename _Traits>  
class std::basic_filebuf< _CharT, _Traits >
```

The actual work of input and output (for files).

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Requirements on `traits_type`, specific to this class:

- `traits_type::pos_type` must be `fpos<traits_type::state_type>`
- `traits_type::off_type` must be `streamoff`
- `traits_type::state_type` must be Assignable and DefaultConstructible,
- `traits_type::state_type()` must be the initial state for `codecvt`.

## 5.217.2 Constructor &amp; Destructor Documentation

**basic\_filebuf()**

```
template<typename _CharT, typename _Traits>
std::basic_filebuf< _CharT, _Traits >::basic_filebuf ()
```

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

References `_M_buf`, `std::basic_streambuf< _CharT, _Traits >::_M_buf_locale`, `_M_buf_size`, `_M_ext_buf`, `_M_ext_buf_size`, `_M_ext_next`, `_M_mode`, `_M_pback`, `_M_pback_cur_save`, `_M_pback_end_save`, `_M_pback_init`, and `_M_reading`.

Referenced by `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`, and `close()`.

**~basic\_filebuf()**

```
template<typename _CharT, typename _Traits>
virtual std::basic_filebuf< _CharT, _Traits >::~~basic_filebuf () [inline], [virtual]
```

The destructor closes the file first.

## 5.217.3 Member Function Documentation

**\_M\_create\_pback()**

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_create_pback () [inline], [protected]
```

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Referenced by `pbackfail()`.

**\_M\_destroy\_pback()**

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback () throw () [inline], [protected]
```

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Referenced by `overflow()`, `seekoff()`, `seekpos()`, `underflow()`, and `xsgntrn()`.

**\_M\_set\_buffer()**

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (
    streamsize __off) [inline], [protected]
```

This function sets the pointers of the internal buffer, both get and put areas. Typically:

\_\_off == egptr() - eback() upon underflow/uflow (**read** mode); \_\_off == 0 upon overflow (**write** mode); \_\_off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: epptr() - pbase() == \_M\_buf\_size - 1, since \_M\_buf\_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Referenced by [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >::stdio\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >::stdio\\_filebuf\(\)](#), [close\(\)](#), [imbue\(\)](#), [open\(\)](#), [overflow\(\)](#), [pbackfail\(\)](#), [underflow\(\)](#), [xsgetn\(\)](#), and [xspn\(\)](#).

## close()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::close
()
```

Closes the currently associated file.

### Returns

this on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

References [basic\\_filebuf\(\)](#), [\\_M\\_mode](#), [\\_M\\_pback\\_init](#), [\\_M\\_reading](#), [\\_M\\_set\\_buffer\(\)](#), and [is\\_open\(\)](#).

Referenced by [open\(\)](#).

## eback()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::eback () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::imbue\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::pbackfail\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

## egptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::egptr () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::underflow\(\)](#), [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >::underflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#), and [xsgetn\(\)](#).

**epptr()**

```
template<typename _CharT, typename _Traits>
```

```
char_type * std::basic_streambuf< _CharT, _Traits >::epptr () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekpos\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#), and [xsputn\(\)](#).

**gbump()**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic_streambuf< _CharT, _Traits >::gbump (
    int __n) [inline], [protected], [inherited]
```

Moving the read position.

**Parameters**

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::pbackfail\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsgetn\(\)](#).

**getloc()**

```
template<typename _CharT, typename _Traits>
```

```
locale std::basic_streambuf< _CharT, _Traits >::getloc () const [inline], [inherited]
```

Locale access.

**Returns**

The current locale in effect.

If pubimbue(loc) has been called, then the most recent loc is returned. Otherwise the global locale in effect at the time of construction is returned.

**gptr()**

```
template<typename _CharT, typename _Traits>
```

```
char_type * std::basic_streambuf< _CharT, _Traits >::gptr () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::imbue\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::pbackfail\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::showmanyc\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::underflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::underflow\(\)](#), [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::underflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsgetn\(\)](#), and [xsgetn\(\)](#).

### imbue()

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf<_CharT, _Traits>::imbue (
    const locale & __loc) [protected], [virtual]
```

Changes translations.

#### Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [\\_M\\_ext\\_buf](#), [\\_M\\_ext\\_next](#), [\\_M\\_mode](#), [\\_M\\_reading](#), [\\_M\\_set\\_buffer\(\)](#), [std::ios\\_base::cur](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), [is\\_open\(\)](#), and [seekoff\(\)](#).

### in\_avail()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::in_avail () [inline], [inherited]
```

Looking ahead into the stream.

#### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

### is\_open()

```
template<typename _CharT, typename _Traits>
bool std::basic_filebuf<_CharT, _Traits>::is_open () const throw () [inline], [nodiscard]
```

Returns true if the external file is open.

Referenced by [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>::stdio\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>::stdio\\_filebuf\(\)](#), [close\(\)](#), [imbue\(\)](#), [open\(\)](#), [seekoff\(\)](#), [seekpos\(\)](#), [setbuf\(\)](#), and [showmanyc\(\)](#).

### open() [1/3]

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path<_Path, __filebuf_type * > std::basic_filebuf<_CharT, _Traits>::open (
    const _Path & __s,
    ios_base::openmode __mode) [inline]
```

Opens an external file.

## Parameters

<code>__s</code>	The name of the file, as a <code>filesystem::path</code> .
<code>__mode</code>	The open mode flags.

## Returns

`this` on success, `NULL` on failure

**open()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_filebuf<_CharT, _Traits>::__filebuf_type * std::basic_filebuf<_CharT, _Traits>::open (
    const char * __s,
    ios_base::openmode __mode)
```

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

## Returns

`this` on success, `NULL` on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

ios_base Flag combination					stdio equivalent
binary	in	out	trunc	app	
		+			w
		+		+	a
				+	a
		+	+		w
	+				r
	+	+			r+
	+	+	+		w+
	+	+		+	a+
	+			+	a+
+		+			wb
+		+		+	ab
+				+	ab
+		+	+		wb
+	+				rb
+	+	+			r+b
+	+	+	+		w+b
+	+	+		+	a+b
+	+			+	a+b

References `_M_mode`, `_M_reading`, `_M_set_buffer()`, `std::ios_base::ate`, `close()`, `std::ios_base::end`, `is_open()`, and `seekoff()`.

**open()** [3/3]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode) [inline]
```

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

**Returns**

`this` on success, NULL on failure

**overflow()**

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow (
    int_type __c = _Traits::eof()) [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

**Parameters**

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

**Returns**

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_buf_size`, `_M_destroy_pback()`, `_M_mode`, `_M_reading`, `_M_set_buffer()`, `std::ios_base::app`, `std::ios_base::cur`, `std::ios_base::out`, `std::basic_streambuf< _CharT, _Traits >::pbase()`, `std::basic_streambuf< _CharT, _Traits >::pbackfail()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

Referenced by `pbackfail()`, `sync()`, `underflow()`, and `xsgetn()`.

**pbackfail()**

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (
    int_type __c = _Traits::eof()) [protected], [virtual]
```

Tries to back up the input sequence.

**Parameters**

<code>_↔</code>	The character to be inserted back into the sequence.
<code>_C</code>	

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

References `_M_create_pback()`, `_M_mode`, `_M_pback_init`, `_M_reading`, `_M_set_buffer()`, `std::ios_base::cur`, `std::basic_streambuf<_CharT, _Traits>::eback()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::in`, `overflow()`, `seekoff()`, and `underflow()`.

**pbase()**

```
template<typename _CharT, typename _Traits>
```

```
char_type * std::basic_streambuf<_CharT, _Traits>::pbase () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::sync()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**pbump()**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic_streambuf<_CharT, _Traits>::pbump (
    int __n) [inline], [protected], [inherited]
```

Moving the write position.

**Parameters**

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the write position without returning any data.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`.

**pptr()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pptr () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::xsputn()`, and `xsputn()`.

**pubimbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
    const locale & __loc) [inline], [inherited]
```

Entry point for imbue().

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls the derived `imbue(__loc)`.

**pubseekoff()**

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

**Parameters**

<code>__off</code>	Offset.
<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekoff` function.

**pubseekpos()**

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

## Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

**pubsetbuf()**

```
template<typename _CharT, typename _Traits>
basic_streambuf * std::basic_streambuf<_CharT, _Traits>::pubsetbuf (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

**pubsync()**

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf<_CharT, _Traits>::pubsync () [inline], [inherited]
```

Calls virtual `sync` function.

Referenced by `std::basic_istream<_CharT, _Traits>::sync()`.

**sbumpc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sbumpc () [inline], [inherited]
```

Getting the next character.

## Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `ufLOW()`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`.

**seekoff()**

```
template<typename _CharT, typename _Traits>
basic_filebuf<_CharT, _Traits>::pos_type std::basic_filebuf<_CharT, _Traits>::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

## Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

References `_M_destroy_pback()`, `_M_reading`, `std::ios_base::cur`, `is_open()`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, and `std::basic_streambuf<_CharT, _Traits>::pptr()`.

Referenced by `imbue()`, `open()`, and `pbackfail()`.

**seekpos()**

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_destroy_pback()`, `std::ios_base::beg`, and `is_open()`.

**setbuf()**

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >↵
::setbuf (
    char_type * __s,
    streamsize __n) [protected], [virtual]
```

Manipulates the buffer.

**Parameters**

<code>↵ __s</code>	Pointer to a buffer area.
<code>↵ __n</code>	Size of <code>__s</code> .

**Returns**

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.↵html#io.streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_buf`, `_M_buf_size`, and `is_open()`.

**setg()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
    char_type * __gbeg,
    char_type * __gnext,
    char_type * __gend) [inline], [protected], [inherited]
```

Setting the three read area pointers.

**Parameters**

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

**Postcondition**

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::wbuffer\\_convert\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekpos\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsgetn\(\)](#).

**setp()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf<_CharT, _Traits>::setp (
    char_type * __pbeg,
    char_type * __pend) [inline], [protected], [inherited]
```

Setting the three write area pointers.

**Parameters**

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

**Postcondition**

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::wbuffer\\_convert\(\)](#).

**sgetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sgetc () [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#).

**sgetn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Entry point for `xsgetn`.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

**showmanyc()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc () [protected], [virtual]
```

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_mode`, `std::ios_base::binary`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::ios_base::in`, and `is_open()`.

**snextc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc () [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char_type, traits_type >::ignore()`, `std::basic_istream< char_type, traits_type >::operator>>()`, and `std::basic_istream< char_type, traits_type >::putback()`.

**sputbackc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
    char_type __c) [inline], [inherited]
```

Pushing characters back into the input stream.

**Parameters**

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

**sputc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
    char_type __c) [inline], [inherited]
```

Entry point for all single-character output functions.

**Parameters**

<code>__c</code>	A character to output.
------------------	------------------------

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::overflow()`.

**sputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
    const char_type * __s,
    streamsize __n) [inline], [inherited]
```

Entry point for all single-character output functions.

**Parameters**

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xsgputn(__s,__n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

**sungetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc () [inline], [inherited]
```

Moving backwards in the input stream.

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbckfail()`. The effect is to *unget* the last character *gotten*.

Referenced by `std::basic_istream< char_type, traits_type >::sentry::sentry()`.

**sync()**

```
template<typename _CharT, typename _Traits>
int std::basic_filebuf< _CharT, _Traits >::sync () [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `overflow()`, `std::basic_streambuf< _CharT, _Traits >::pbase()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

**uflow()**

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow () [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Referenced by `xsgetn()`.

**underflow()**

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow ()
[protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_buf_size`, `_M_destroy_pback()`, `_M_mode`, `_M_set_buffer()`, `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, `std::ios_base::in`, and `overflow()`.

Referenced by `pbackfail()`.

**xsggetn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf<_CharT, _Traits>::xsggetn (
    char_type * __s,
    streamsize __n) [protected], [virtual]
```

Multiple character extraction.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

References `_M_buf_size`, `_M_destroy_pback()`, `_M_mode`, `_M_pback_init`, `_M_reading`, `_M_set_buffer()`, `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::in`, `std::ios_base::in`, `overflow()`, `std::basic_streambuf<_CharT, _Traits>::setg()`, and `std::basic_streambuf<char_type, traits_type>::xsggetn()`.

**xsputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf<_CharT, _Traits>::xsputn (
    const char_type * __s,
    streamsize __n) [protected], [virtual]
```

Multiple character insertion.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

References `_M_buf_size`, `_M_mode`, `_M_reading`, `_M_set_buffer()`, `std::ios_base::app`, `std::basic_streambuf<_CharT, _Traits>::eptr()`, `std::ios_base::out`, `std::basic_streambuf<_CharT, _Traits>::pbase()`, `std::basic_streambuf<_CharT, _Traits>::pptr()`, and `std::basic_streambuf<char_type, traits_type>::xsputn()`.

#### 5.217.4 Member Data Documentation

##### **\_M\_buf**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_filebuf< \_CharT, \_Traits >::\_M\_buf [protected]
```

Pointer to the beginning of internal buffer.

Referenced by [basic\\_filebuf\(\)](#), and [setbuf\(\)](#).

##### **\_M\_buf\_locale**

```
template<typename _CharT, typename _Traits>
locale std::basic\_streambuf< \_CharT, \_Traits >::\_M\_buf\_locale [protected], [inherited]
```

Current locale setting.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::basic\\_filebuf\(\)](#).

##### **\_M\_buf\_size**

```
template<typename _CharT, typename _Traits>
size_t std::basic\_filebuf< \_CharT, \_Traits >::\_M\_buf\_size [protected]
```

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Referenced by [basic\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >::stdio\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [setbuf\(\)](#), [underflow\(\)](#), [xsgetn\(\)](#), and [xspn\(\)](#).

##### **\_M\_ext\_buf**

```
template<typename _CharT, typename _Traits>
char* std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_buf [protected]
```

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Referenced by [basic\\_filebuf\(\)](#), and [imbue\(\)](#).

##### **\_M\_ext\_buf\_size**

```
template<typename _CharT, typename _Traits>
streamsize std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_buf\_size [protected]
```

Size of buffer held by `_M_ext_buf`.

Referenced by [basic\\_filebuf\(\)](#).

##### **\_M\_ext\_next**

```
template<typename _CharT, typename _Traits>
const char* std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_next [protected]
```

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Referenced by [basic\\_filebuf\(\)](#), and [imbue\(\)](#).

##### **\_M\_in\_beg**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_streambuf< \_CharT, \_Traits >::\_M\_in\_beg [protected], [inherited]
```

Start of get area.

**`_M_in_cur`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]
Current read area.
```

**`_M_in_end`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]
End of get area.
```

**`_M_mode`**

```
template<typename _CharT, typename _Traits>
ios\_base::openmode std::basic\_filebuf< _CharT, _Traits >::_M_mode [protected]
```

Place to stash in || out || in | out settings for current filebuf.

Referenced by [basic\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>::stdio\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf<\\_CharT, \\_Traits>::close\(\)](#), [imbue\(\)](#), [open\(\)](#), [overflow\(\)](#), [pbackfail\(\)](#), [showmanyc\(\)](#), [underflow\(\)](#), [xsgetn\(\)](#), and [xsputn\(\)](#).

**`_M_out_beg`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]
Start of put area.
```

**`_M_out_cur`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]
Current put area.
```

**`_M_out_end`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]
End of put area.
```

**`_M_pback`**

```
template<typename _CharT, typename _Traits>
char_type std::basic\_filebuf< _CharT, _Traits >::_M_pback [protected]
```

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Referenced by [basic\\_filebuf\(\)](#).

**`_M_pback_cur_save`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_filebuf< _CharT, _Traits >::_M_pback_cur_save [protected]
```

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Referenced by [basic\\_filebuf\(\)](#).

**`_M_pback_end_save`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic\_filebuf< _CharT, _Traits >::_M_pback_end_save [protected]
Necessary bits for putback buffer management.
```

**Note**

pbacks of over one character are not currently supported.

Referenced by [basic\\_filebuf\(\)](#).

**`_M_pback_init`**

```
template<typename _CharT, typename _Traits>
bool std::basic\_filebuf< _CharT, _Traits >::_M_pback_init [protected]
Necessary bits for putback buffer management.
```

**Note**

pbacks of over one character are not currently supported.

Referenced by [basic\\_filebuf\(\)](#), [close\(\)](#), [pbackfail\(\)](#), and [xsgetn\(\)](#).

**`_M_reading`**

```
template<typename _CharT, typename _Traits>
bool std::basic\_filebuf< _CharT, _Traits >::_M_reading [protected]
_M_reading == false && _M_writing == false for uncommitted mode; _M_reading == true for read mode; _M_writing
== true for write mode;
```

NB: `_M_reading == true && _M_writing == true` is unused.

Referenced by [basic\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >::stdio\\_filebuf\(\)](#), [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >::close\(\)](#), [imbue\(\)](#), [open\(\)](#), [overflow\(\)](#), [pbackfail\(\)](#), [seekoff\(\)](#), [xsgetn\(\)](#), and [xsputn\(\)](#).

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- \_\_istream\_type & operator>> (bool &\_\_n)
- \_\_istream\_type & operator>> (short &\_\_n)
- \_\_istream\_type & operator>> (unsigned short &\_\_n)

- `__istream_type & operator>>` (double &\_\_f)
- `__istream_type & operator>>` (long double &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__ostream_type & operator<<` (\_\_ios\_type &(\_\_pf)(\_\_ios\_type &))
- `__ostream_type & operator<<` (ios\_base &(\_\_pf)(ios\_base &))

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (bool \_\_n)

### 5.218.1 Detailed Description

`template<typename _CharT, typename _Traits>`  
**class** `std::basic_fstream`< `_CharT`, `_Traits` >

Controlling input and output for files.

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class supports reading from and writing to named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

### 5.218.2 Member Typedef Documentation

#### event\_callback

`typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`  
 The type of an event callback function.

#### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

#### iosstate

`typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`

- eofbit
- failbit
- goodbit

### openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

### seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

## 5.218.3 Member Enumeration Documentation

### event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

## 5.218.4 Constructor & Destructor Documentation

### basic\_fstream() [1/4]

```
template<typename _CharT, typename _Traits>  
std::basic_fstream< _CharT, _Traits >::basic_fstream () [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

**basic\_fstream()** [2/4]

```
template<typename _CharT, typename _Traits>
std::basic_fstream< _CharT, _Traits >::basic_fstream (
    const char * __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]
```

Create an input/output file stream.

**Parameters**

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

**basic\_fstream()** [3/4]

```
template<typename _CharT, typename _Traits>
std::basic_fstream< _CharT, _Traits >::basic_fstream (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]
```

Create an input/output file stream.

**Parameters**

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

**basic\_fstream()** [4/4]

```
template<typename _CharT, typename _Traits>
template<typename _Path, typename _Require = _If_fs_path<_Path>>
std::basic_fstream< _CharT, _Traits >::basic_fstream (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Create an input/output file stream.

**Parameters**

<code>__s</code>	filesystem::path specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

**~basic\_fstream()**

```
template<typename _CharT, typename _Traits>
std::basic_fstream< _CharT, _Traits >::~~basic_fstream () [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

## 5.218.5 Member Function Documentation

### **`_M_getloc()`**

const [locale](#) & std::ios\_base::\_M\_getloc () const [inline], [inherited]

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_year\(\)](#), [std::num\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), [std::time\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::get\(\)](#), and [std::time\\_put<\\_CharT, \\_Outlter>::put\(\)](#).

### **`bad()`**

template<typename \_CharT, typename \_Traits>

bool [std::basic\\_ios<\\_CharT, \\_Traits>::bad](#) () const [inline], [nodiscard], [inherited]

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#).

### **`clear()`**

template<typename \_CharT, typename \_Traits>

void [std::basic\\_ios<\\_CharT, \\_Traits>::clear](#) (  
    [iostate](#) \_\_state = [goodbit](#)) [inherited]

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios<char\\_type, traits\\_type>::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type>::unget\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

### **`close()`**

template<typename \_CharT, typename \_Traits>

void [std::basic\\_fstream<\\_CharT, \\_Traits>::close](#) () [inline]

Close the file.

Calls [std::basic\\_filebuf::close\(\)](#). If that function fails, [failbit](#) is set in the stream's error state.

**copyfmt()**

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
```

```
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

**fail()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
Fast error checking.
```

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by `std::basic_ios< char_type, traits_type >::operator bool()`, `std::basic_ios< char_type, traits_type >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellg()`, and `std::regex_traits< _Ch_type >::value()`.

**fill()** [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard], [inherited]
Retrieves the empty character.
```

**Returns**

The current fill character.

It defaults to a space (' ') in the current locale.

Referenced by `copyfmt()`.

**fill()** [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator<<\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**flush()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::flush\(\)](#).

**gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream<_CharT, _Traits>::gcount () const [inline], [inherited]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

**get()** [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References `_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**get()** [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb, widen("\n"))`.

**get()** [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References `_M_gcount`, and `std::ios_base::goodbit`.

**get()** [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c) [inherited]
```

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**get()** [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

**Returns**

\*this

Returns `get(__s,__n,widen("\n"))`.

**get()** [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

## Note

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::](#)

**getline()** [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

`*this`

Returns `getline(__s,__n,widen("\n"))`.

**getline()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References [\\_M\\_gcount](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetc\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputc\(\)](#).

**getline()** [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale::global()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_Outiter>::do\\_put\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::do\\_get\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**good()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**ignore()** [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**ignore()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::`

**ignore()** [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim) [inherited]
```

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

`*this`

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References `_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::`

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< char_type, traits_type >::basic_ios()`, and `std::basic_ostream< char_type, traits_type >::basic_ostream()`.

**is\_open()**

```
template<typename _CharT, typename _Traits>
bool std::basic_fstream< _CharT, _Traits >::is_open () [inline], [nodiscard]
```

Wrapper to test for an open file.

**Returns**

`rdbuf() -> is_open()`

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References [iword\(\)](#).

Referenced by [iword\(\)](#).

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios<_CharT, _Traits>::narrow (
    char_type __c,
    char __default) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**open() [1/3]**

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path<_Path, void> std::basic_fstream<_CharT, _Traits>::open (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file, as a <code>filesystem::path</code> .
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

**open() [2/3]**

```
template<typename _CharT, typename _Traits>
void std::basic_fstream<_CharT, _Traits>::open (
```

```
const char * __s,
ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Opens an external file.

#### Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

#### **open()** [3/3]

```
template<typename _CharT, typename _Traits>
void std::basic_fstream< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Opens an external file.

#### Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

#### **operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

#### **operator"!"()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

#### **operator<<()** [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<()** [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ostream_type & (* __pf) (__ostream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**operator<<()** [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

**Parameters**

$\_p$	A variable of pointer type.
-------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [6/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

$\_f$	A variable of builtin floating point type.
-------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [7/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

$\_f$	A variable of builtin floating point type.
-------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftarrow$	A variable of builtin integral type.
$\leftarrow n$	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `io manip` header.

**operator<<()** [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftarrow$	A variable of builtin integral type.
$\leftarrow n$	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

$\leftarrow$	A variable of builtin floating point type.
$\leftarrow$	
$\leftarrow$	
$\leftarrow$	
$\leftarrow f$	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    short __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References `basic_ostream()`, `std::ios_base::badbit`, `std::ostreambuf_iterator<_CharT, _Traits>::failed()`, `std::ios_base::goodbit`, `std::num_put<_CharT, _OutTiter>::put()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::use_facet()`.

**operator<<()** [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator>>()** [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    __ios_type &(* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    __istream_type &(* __pf) (__istream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
    __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**operator>>()** [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    int & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

$\leftrightarrow$	A variable of builtin integral type.
$\_n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator>>()** [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

$\leftrightarrow$	A variable of builtin integral type.
$\_n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

$\leftrightarrow$	A variable of builtin floating point type.
$\_ \leftrightarrow$	
$\_ \leftrightarrow$	
$\_ \leftrightarrow$	
$f$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::ios\\_base::goodbit](#), and [std::use\\_facet\(\)](#).

**operator>>()** [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**peek()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::chrono::operator<<()`.

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**put()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c) [inherited]
```

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits](#)

**putback()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#).

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

$\leftrightarrow$ _ix	Index into the array.
--------------------------	-----------------------

**Returns**

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_fstream< _CharT, _Traits >::rdbuf () const [inline], [nodiscard]
```

Accessing the underlying buffer.

**Returns**

The current basic\_filebuf buffer.

This hides both signatures of std::basic\_ios::rdbuf().

**rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

__sb	The new stream buffer.
------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument rdbuf(), which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

**rdstate()**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<char_type, traits_type>::bad()`, `std::basic_ios<char_type, traits_type>::clear()`, `std::basic_ios<char_type, traits_type>::eof()`, `std::basic_ios<char_type, traits_type>::fail()`, `std::basic_ios<char_type, traits_type>::good()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char_type, traits_type>::seekg()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**read()**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

References `_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**readsome()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream<_CharT, _Traits>::readsome (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**register\_callback()**

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

**seekg() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekg()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos) [inherited]
```

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekp()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekp()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    pos_type __pos) [inherited]
```

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets `failbit`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf() [1/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf() [2/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::ws()`.

**sync()**

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

## Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

## Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellg()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References [std::ios\\_base::badbit](#), [std::ios\\_base::cur](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::in](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#).

**tellp()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp () [inherited]
```

Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

References [std::ios\\_base::cur](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::out](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#).

**tie() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), and [copyfmt\(\)](#).

**tie() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

**unget()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

**Returns**

\*this

If rdbuf() is not null, calls rdbuf()->sungetc(c).

If rdbuf() is null or if sungetc() fails, sets badbit in the error state.

**Note**

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

References [\\_M\\_gcount](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References [fmtflags](#).

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< char_type, traits_type >::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**write()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n) [inherited]
```

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

\*this

Characters are copied from `___s` and inserted into the stream until one of the following happens:

- `___n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( )    [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.218.6 Member Data Documentation****`_M_gcount`**

```
template<typename _CharT, typename _Traits>
```

```
streamsize std::basic_istream<_CharT, _Traits>::_M_gcount    [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `get()`, `get()`, `get()`, `get()`, `getline()`, `ignore()`, `ignore()`, `ignore()`, `putback()`, `read()`, `readsome()`, and `unget()`.

**`adjustfield`**

```
const fmtflags std::ios_base::adjustfield    [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**`app`**

```
const openmode std::ios_base::app    [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**`ate`**

```
const openmode std::ios_base::ate    [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

## badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::ws()`, and `std::ws()`.

## basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

## beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

## binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

## boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

## cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

## dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<char_type, traits_type>::get()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<char_type, traits_type>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char_type, traits_type>::seekg()`, and `std::ws()`.

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char_type, traits_type>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_ostream<_CharT, _Traits>::ignore()`.

`std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::ws()` and `std::ws()`.

## hex

`const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::hex()`.

## in

`const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::xsgetn()` and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

## internal

`const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

## left

`const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

## oct

`const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

## out

`const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

## right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.) Referenced by [std::right\(\)](#).

### scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

### showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

### showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

### showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

### skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

### trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

### unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

### uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

### 5.219.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy,
bool Store_Hash, typename Tag, typename Policy_Tl, typename _Alloc>
class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag,
Policy_Tl, _Alloc >
```

A hashed container abstraction.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor.
<i>Eq_Fn</i>	Equal functor.
<i>Resize_Policy</i>	Resizes hash.
<i>Store_Hash</i>	Indicates whether the hash value will be stored along with each key.
<i>Tag</i>	Instantiating data structure type, see container_tag.
<i>Policy_Tl</i>	Policy typelist.
<i>_Alloc</i>	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: cc\_hash\_tag, gp\_hash\_tag, and descendants of basic\_hash\_tag.

Base choices are: detail::cc\_ht\_map, detail::gp\_ht\_map

  - `__istream_type & operator>> (ios_base &(*__pf)(ios_base &))`

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (bool & __n)`
  - `__istream_type & operator>> (short & __n)`
  - `__istream_type & operator>> (unsigned short & __n)`
  - `__istream_type & operator>> (int & __n)`
  - `__istream_type & operator>> (unsigned int & __n)`
  - `__istream_type & operator>> (long & __n)`
  - `__istream_type & operator>> (unsigned long & __n)`
  - `__istream_type & operator>> (long long & __n)`
  - `__istream_type & operator>> (unsigned long long & __n)`
- 
- `__istream_type & operator>> (float & __f)`
  - `__istream_type & operator>> (double & __f)`
  - `__istream_type & operator>> (long double & __f)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

### 5.221.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ifstream< _CharT, _Traits >
```

Controlling input for files.

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

### 5.221.2 Member Typedef Documentation

#### `__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type [inherited]
```

These are non-standard types.

#### `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

#### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

#### `iostate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`

- eofbit
- failbit
- goodbit

### openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

### seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

## 5.221.3 Member Enumeration Documentation

### event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

## 5.221.4 Constructor & Destructor Documentation

### `basic_ifstream()` [1/4]

```
template<typename _CharT, typename _Traits>
std::basic_ifstream<_CharT, _Traits>::basic_ifstream () [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

**basic\_ifstream()** [2/4]

```
template<typename _CharT, typename _Traits>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
    const char * __s,
    ios_base::openmode __mode = ios_base::in) [inline], [explicit]
```

Create an input file stream.

**Parameters**

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

**basic\_ifstream()** [3/4]

```
template<typename _CharT, typename _Traits>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in) [inline], [explicit]
```

Create an input file stream.

**Parameters**

<code>__s</code>	<code>std::string</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

**basic\_ifstream()** [4/4]

```
template<typename _CharT, typename _Traits>
template<typename _Path, typename _Require = _If_fs_path<_Path>>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in) [inline]
```

Create an input file stream.

**Parameters**

<code>__s</code>	<code>filesystem::path</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

**~basic\_ifstream()**

```
template<typename _CharT, typename _Traits>
std::basic_ifstream< _CharT, _Traits >::~~basic_ifstream () [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

### 5.221.5 Member Function Documentation

#### **\_M\_getloc()**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_year\(\)](#), [std::num\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), [std::time\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), and [std::time\\_put<\\_CharT, \\_Outlter>::put\(\)](#).

#### **bad()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic\_ios<\_CharT, \_Traits>::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

#### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#).

#### **clear()**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic\_ios<\_CharT, \_Traits>::clear (  
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios<char\\_type, traits\\_type>::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type>::unget\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

#### **close()**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic\_ifstream<\_CharT, \_Traits>::close () [inline]
```

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

**copyfmt()**

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::eof() const [inline], [nodiscard], [inherited]
Fast error checking.
```

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::exceptions() const [inline], [nodiscard], [inherited]
Throwing exceptions on errors.
```

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::exceptions (
    iostate __except) [inline], [inherited]
Throwing exceptions on errors.
```

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
```

```
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

### fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
Fast error checking.
```

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::operator bool\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::regex\\_traits< \\_Ch\\_type >::value\(\)](#).

### fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard], [inherited]
Retrieves the empty character.
```

#### Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Referenced by [copyfmt\(\)](#).

### fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

#### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ' ) in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::chrono::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, and `std::operator>>()`.

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_ifstream<_CharT, _Traits>::gcount () const [inline], [inherited]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

**get()** [1/6]

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits>::int_type std::basic_ifstream<_CharT, _Traits>::get (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**get()** [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb,widen("\n"))`.

**get()** [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References `_M_gcount`, and `std::ios_base::goodbit`.

**get()** [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c) [inherited]
```

Simple extraction.

## Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

## Returns

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

## Note

This function is not overloaded on signed char and unsigned char.

References `_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**get()** [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

## Returns

`*this`

Returns `get(__s, __n, widen('\n'))`.

**get()** [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.  
In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>](#):

**getline()** [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

**Returns**

\*this

Returns `getline(__s,__n,widen("\n"))`.

**getline()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References `_M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**getline()** [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale::global C++ locale`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _Outiter >::do_put()`, `std::basic_ios< _CharT, _Traits >::do_get()`, `std::chrono::operator<<()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

**good()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::__detail::operator>>()`.

**ignore()** [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**ignore()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**ignore()** [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim) [inherited]
```

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< char_type, traits_type >::basic_ios()`, and `std::basic_ostream< char_type, traits_type >::basic_ostream()`.

**is\_open()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ifstream< _CharT, _Traits >::is_open () [inline], [nodiscard]
```

Wrapper to test for an open file.

**Returns**

`rdbuf() -> is_open()`

**word()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References `iword()`.

Referenced by `iword()`.

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**open() [1/3]**

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path< _Path, void > std::basic_ifstream< _CharT, _Traits >::open (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in) [inline]
```

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file, as a filesystem::path.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

**open() [2/3]**

```
template<typename _CharT, typename _Traits>
void std::basic_ifstream< _CharT, _Traits >::open (
    const char * __s,
    ios_base::openmode __mode = ios_base::in) [inline]
```

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

**open()** [3/3]

```
template<typename _CharT, typename _Traits>
void std::basic_ifstream<_CharT, _Traits>::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in) [inline]
```

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios<_CharT, _Traits>::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**operator!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**operator>>()** [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> (
    __ios_type &(* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

**operator>>()** [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> (
    __istream_type &(* __pf) (__istream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

**operator>>()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::operator>> (
    __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**operator>>()** [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

$\leftarrow$	A variable of builtin floating point type.
$\_ \leftarrow$	
$\leftarrow$	
$\_ \leftarrow$	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
    int & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_ \leftarrow$	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::use_facet()`.

**operator>>()** [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    ios_base &(* __pf) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>_↔</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

<code>↔</code> <code>_↔</code> <code>↔</code> <code>_↔</code> <code>f</code>	A variable of builtin floating point type.
--	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>_↔</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::use_facet()`.

**operator>>()** [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> (
    unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> (
    unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> (
    unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>_↔</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>_↔</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

<code>_↔</code> <code>_p</code>	A variable of pointer type.
------------------------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**peek()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::chrono::operator<<()`.

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**putback()**

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::putback (
    char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

### Parameters

$\leftrightarrow$ _ix	Index into the array.
--------------------------	-----------------------

### Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

### rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_ifstream< _CharT, _Traits >::rdbuf () const [inline], [nodiscard]
Accessing the underlying buffer.
```

### Returns

The current basic\_filebuf buffer.

This hides both signatures of std::basic\_ios::rdbuf().

### rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

### Parameters

__sb	The new stream buffer.
------	------------------------

### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument rdbuf(), which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

### rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<char_type, traits_type>::bad()`, `clear()`, `std::basic_ios<char_type, traits_type>::eof()`,

`std::basic_ios<char_type, traits_type>::fail()`, `std::basic_ios<char_type, traits_type>::good()`, `std::basic_istream<_CharT, _Traits>::`

`std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char_type, traits_type>::`

and `std::basic_istream<_CharT, _Traits>::unget()`.

**read()**

```
template<typename _CharT, typename _Traits>
```

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

References `_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`,

`std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**readsome()**

```
template<typename _CharT, typename _Traits>
```

```
streamsize std::basic_istream<_CharT, _Traits>::readsome (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**register\_callback()**

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

**seekg() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekg()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::seekg (
    pos_type __pos) [inherited]
```

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf()** [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf()** [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::ws()`.

**sync()**

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellg()**

```
template<typename _CharT, typename _Traits>
basic_ifstream< _CharT, _Traits >::pos_type std::basic_ifstream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

## Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References [std::ios\\_base::badbit](#), [std::ios\\_base::cur](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::in](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

## Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [copyfmt\(\)](#).

**tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

## Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**unget()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [\\_M\\_gcount](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References [fmtflags](#).

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< char_type, traits_type >::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( ) [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.221.6 Member Data Documentation****\_M\_gcount**

```
template<typename _CharT, typename _Traits>
```

```
streamsize std::basic_ifstream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `get()`, `get()`, `get()`, `get()`, `getline()`, `ignore()`, `ignore()`, `ignore()`, `putback()`, `read()`, `readsome()`, and `unset()`.

**adjustfield**

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**app**

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**ate**

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**badbit**

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::clear()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::tellg()`, and `std::ws()`.

**basefield**

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**beg**

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**binary**

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**boolalpha**

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**cur**

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**dec**

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<char_type, traits_type>::get()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<char_type, traits_type>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char_type, traits_type>::seekg()`, and `std::ws()`.

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char_type, traits_type>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), and [std::ws\(\)](#).

**hex**

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::hex\(\)](#).

**in**

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekpos\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::showmanyc\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::underflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::xsgetn\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsgetn\(\)](#).

**internal**

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**left**

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.) Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

### **oct**

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

### **out**

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::seek()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::tellp()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### **right**

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

### **scientific**

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

### **showbase**

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::noshowbase()`, and `std::showbase()`.

### **showpoint**

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

### **showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by `std::noshowpos()`, and `std::showpos()`.

### **skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

**trunc**

const [openmode](#) std::ios\_base::trunc [static], [inherited]  
 Truncate an existing stream when opening. Default for ofstream.

**unitbuf**

const [fmtflags](#) std::ios\_base::unitbuf [static], [inherited]  
 Flushes output after each output operation.  
 Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**uppercase**

const [fmtflags](#) std::ios\_base::uppercase [static], [inherited]  
 Replaces certain lowercase letters with their uppercase equivalents in generated output.  
 Referenced by [std::num\\_put<\\_CharT, \\_Outiter>::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).  
 The documentation for this class was generated from the following file:

**5.222 \_\_gnu\_pbds::basic\_invalidation\_guarantee Struct Reference**

#include <tag\_and\_trait.hpp>

Inheritance diagram for \_\_gnu\_pbds::basic\_invalidation\_guarantee:

**5.222.1 Detailed Description**

Signifies a basic invalidation guarantee that any iterator, pointer, or reference to a container object's mapped value type is valid as long as the container is not modified.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

```
#include <basic_ios.h>
```

Inheritance diagram for `std::basic_ios<_CharT, _Traits>`:

- `_Words _M_word_zero`

### 5.223.1 Detailed Description

`template<typename _CharT, typename _Traits>`

`class std::basic_ios< _CharT, _Traits >`

Template class `basic_ios`, virtual base class for all stream classes.

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar)`;) are consolidated in this class.

### 5.223.2 Member Typedef Documentation

#### **\_\_ctype\_type**

```
template<typename _CharT, typename _Traits>
typedef ctype<_CharT> std::basic\_ios< _CharT, _Traits >::__ctype_type
```

These are non-standard types.

#### **\_\_num\_get\_type**

```
template<typename _CharT, typename _Traits>
typedef num\_get<_CharT, istreambuf\_iterator<_CharT, _Traits> > std::basic\_ios< _CharT, _Traits
>::__num_get_type
```

These are non-standard types.

#### **\_\_num\_put\_type**

```
template<typename _CharT, typename _Traits>
typedef num\_put<_CharT, ostreambuf\_iterator<_CharT, _Traits> > std::basic\_ios< _CharT, _Traits
>::__num_put_type
```

These are non-standard types.

#### **char\_type**

```
template<typename _CharT, typename _Traits>
typedef _CharT std::basic\_ios< _CharT, _Traits >::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

#### **event\_callback**

```
typedef void(* std::ios\_base::event\_callback) (event __e, ios\_base &__b, int __i) [inherited]
```

The type of an event callback function.

#### Parameters

<a href="#">__e</a>	One of the members of the event enum.
<a href="#">__b</a>	Reference to the ios_base object.
<a href="#">__i</a>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios\_base and basic\_ios functions, specifically imbue(), copyfmt(), and ~ios().

#### **int\_type**

```
template<typename _CharT, typename _Traits>
typedef _Traits::int_type std::basic\_ios< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

## iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

## off\_type

```
template<typename _CharT, typename _Traits>
```

```
typedef _Traits::off_type std::basic_ios< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

## openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

## pos\_type

```
template<typename _CharT, typename _Traits>
```

```
typedef _Traits::pos_type std::basic_ios< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

## seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**traits\_type**

```
template<typename _CharT, typename _Traits>
typedef _Traits std::basic_ios< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**5.223.3 Member Enumeration Documentation****event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

erase\_event is used during ~ios() and copyfmt(). imbue\_event is used during imbue(). copyfmt\_event is used during copyfmt().

**5.223.4 Constructor & Destructor Documentation****basic\_ios() [1/2]**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::basic_ios (
    basic_streambuf< _CharT, _Traits > * __sb) [inline], [explicit]
```

Constructor performs initialization.

The parameter is passed by derived streams.

Referenced by [copyfmt\(\)](#).

**~basic\_ios()**

```
template<typename _CharT, typename _Traits>
virtual std::basic_ios< _CharT, _Traits >::~~basic_ios () [inline], [virtual]
```

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by rdbuf().

**basic\_ios() [2/2]**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::basic_ios () [inline], [protected]
```

Empty.

The default constructor does nothing and is not normally accessible to users.

**5.223.5 Member Function Documentation****\_M\_getloc()**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_date\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_weekday\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_year\(\)](#), [std::num\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::get\(\)](#), and [std::time\\_put< \\_CharT, \\_Outlter >::put\(\)](#).

**bad()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [nodiscard]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#).

**clear()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit)
```

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::seekg\(\)](#), and [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#).

**copyfmt()**

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs)
```

Copies fields of `__rhs` into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [nodiscard]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [nodiscard]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `clear()`, and `copyfmt()`.

**exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except) [inline]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

**fail()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard]
```

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by `std::basic_ios< char_type, traits_type >::operator bool()`, `std::basic_ios< char_type, traits_type >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

**fill()** [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard]
Retrieves the empty character.
```

**Returns**

The current fill character.

It defaults to a space (' ') in the current locale.

Referenced by `copyfmt()`.

**fill()** [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline]
Sets a new empty character.
```

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
Access to format flags.
```

**Returns**

The format control flags for both input and output.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::chrono::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, and `std::operator>>()`.

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
Setting new format flags all at once.
```

## Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

## Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::money\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**good()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [nodiscard]
```

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**imbue()**

```
template<typename _CharT, typename _Traits>
```

```
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc)
```

Moves to a new locale.

## Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

## Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::imbue\(\)](#), and [rdbuf\(\)](#).

Referenced by [std::chrono::operator<<\(\)](#).

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb) [protected]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< char_type, traits_type >::basic_ios()`, and `std::basic_ostream< char_type, traits_type >::basic_ostream()`.

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References `iword()`.

Referenced by `iword()`.

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default) const [inline]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [nodiscard]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**operator"!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const [inline],
[nodiscard]
```

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Referenced by [clear\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [imbue\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::ws\(\)](#).

**rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb)
```

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

**rdstate()**

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< char_type, traits_type >::bad()`, `clear()`, `std::basic_ios< char_type, traits_type >::eof()`,

`std::basic_ios< char_type, traits_type >::fail()`, `std::basic_ios< char_type, traits_type >::good()`, `std::basic_istream< _CharT, _Traits >::`

`std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char_type, traits_type >::`

and `std::basic_istream< _CharT, _Traits >::unget()`.

**register\_callback()**

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

**setf() [1/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by `std::__detail::operator>>()`.

**setf() [2/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state) [inline]
```

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), and [std::ws\(\)](#).

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), and [copyfmt\(\)](#).

**tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References [fmtflags](#).

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< char_type, traits_type >::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( ) [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.223.6 Member Data Documentation

**adjustfield**

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**app**

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**ate**

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#).

**badbit**

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::clear\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_ostream< char\\_type, traits\\_type >::operator<<\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::tellg\(\)](#), and [std::ws\(\)](#).

**basefield**

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Referenced by [std::dec\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::hex\(\)](#), and [std::oct\(\)](#).

**beg**

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekpos\(\)](#).

**binary**

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#).

**boolalpha**

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract bool in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), and [std::noboolalpha\(\)](#).

**cur**

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::imbue\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

**dec**

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#).

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_time\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::unget\(\)](#), and [std::ws\(\)](#).

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits >::seekp\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits >::seekp\(\)](#).

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::num\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_year\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#) and [std::ws\(\)](#).

## hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), and [std::hex\(\)](#).

## in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::xsgetn\(\)](#) and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

## internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

## left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), and [std::left\(\)](#).

## oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

## out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::pbackfail\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#) and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::xsgetn\(\)](#).

`std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_stringbuf<_CharT, _Traits, std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

### scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

### showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, `std::noshowbase()`, and `std::showbase()`.

### showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

### showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by `std::noshowpos()`, and `std::showpos()`.

### skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

### trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

### unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`, `std::nounitbuf()`, and `std::unitbuf()`.

### uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

### Extractors

All the *operator>>* functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to false. This has several effects, concluding with the setting of a status flag; see the *sentry* documentation for more.

If the *sentry* status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if *badbit* is set in the exceptions mask.

- [\\_\\_istream\\_type](#) & [operator>>](#) (double &\_\_f)
- [\\_\\_istream\\_type](#) & [operator>>](#) (long double &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to true. This has several effects, concluding with the setting of a status flag; see the *sentry* documentation for more.

If the *sentry* status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by *gcount()*.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if *badbit* is set in the exceptions mask.

- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`

- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

### 5.224.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_istream<_CharT, _Traits >
```

Template class basic\_istream.

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class multiply inherits from the input and output stream classes simply to provide a single interface.

## 5.224.2 Member Typedef Documentation

**event\_callback**

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

## Parameters

<code>↔ _e</code>	One of the members of the event enum.
<code>↔ _b</code>	Reference to the ios_base object.
<code>↔ _i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios\_base and basic\_ios functions, specifically imbue(), copyfmt(), and ~ios().

**iostate**

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

**openmode**

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

**seekdir**

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**5.224.3 Member Enumeration Documentation****event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**5.224.4 Constructor & Destructor Documentation****basic\_iostream()**

```
template<typename _CharT, typename _Traits>  
std::basic_iostream< _CharT, _Traits >::basic_iostream (  
    basic_streambuf< _CharT, _Traits > * __sb) [inline], [explicit]
```

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

**~basic\_iostream()**

```
template<typename _CharT, typename _Traits>  
virtual std::basic_iostream< _CharT, _Traits >::~~basic_iostream () [inline], [virtual]
```

Destructor does nothing.

**5.224.5 Member Function Documentation****\_M\_getloc()**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

**bad()**

```
template<typename _CharT, typename _Traits>  
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**clear()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

References `std::ios_base::badbit`, `exceptions()`, `rdbuf()`, and `rdstate()`.

Referenced by `std::basic_ios< char_type, traits_type >::exceptions()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char_type, traits_type >::seekg()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**copyfmt()**

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References `basic_ios()`, `std::__addressof()`, `exceptions()`, `fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `tie()`, `std::tie()`, and `std::ios_base::width()`.

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

**exceptions()** [1/2]

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [nodiscard], [inherited]
Throwing exceptions on errors.
```

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `clear()`, and `copyfmt()`.

**exceptions()** [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
    iosstate __except) [inline], [inherited]
Throwing exceptions on errors.
```

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

**fail()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
Fast error checking.
```

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Referenced by `std::basic_ios< char_type, traits_type >::operator bool()`, `std::basic_ios< char_type, traits_type >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellg()`, and `std::regex_traits< _Ch_type >::value()`.

**fill()** [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Referenced by [copyfmt\(\)](#).

**fill()** [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator<<\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**flush()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush () [inherited]
Synchronizing the stream buffer.
```

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits`

**gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline], [inherited]
Character counting.
```

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

**get() [1/6]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets `failbit` and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**get() [2/6]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb,widen("\n"))`.

**get()** [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**get()** [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c) [inherited]
```

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**get()** [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

## Returns

`*this`

Returns `get(__s,__n,widen("\n"))`.

**get()** [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, `failbit` is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

## Note

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::](#)

**getline()** [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

<a href="#"></a> <code>__s</code>	A character array in which to store the data.
<a href="#"></a> <code>__n</code>	Maximum number of characters to extract.

**Returns**

`*this`

Returns `getline(__s,__n,widen("\n"))`.

**getline() [2/3]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

**Returns**

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References `_M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sputc()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _Cha`

**getline() [3/3]**

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

**good()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios<_CharT, _Traits>::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**ignore()** [1/3]

```
template<typename _CharT, typename _Traits>
```

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**ignore()** [2/3]

```
template<typename _CharT, typename _Traits>
```

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::`

**ignore()** [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim) [inherited]
```

Discarding characters.

## Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References `_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::`

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

## Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

## Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::init (
    basic_streambuf<_CharT, _Traits> * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios<char_type, traits_type>::basic_ios()`, and `std::basic_ostream<char_type, traits_type>::basic_ostream()`.

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References [iword\(\)](#).

Referenced by [iword\(\)](#).

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional I10n notes are at [https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html↔](https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html)

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator"!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator<<()** [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ios_type &(* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**operator<<()** [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ostream_type &(* __pf) (__ostream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**operator<<()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**operator<<()** [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin floating point type.
$\_ \leftrightarrow$	
$\leftrightarrow$	
$\_ \leftrightarrow$	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<() [8/17]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_ n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<() [9/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

**operator<<() [10/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_ n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

↔	A variable of builtin floating point type.
↔	
↔	
↔	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

↔	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    short __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

↔	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

References [basic\\_ostream\(\)](#), [std::ios\\_base::badbit](#), [std::ostreambuf\\_iterator< \\_CharT, \\_Traits >::failed\(\)](#), [std::ios\\_base::goodbit](#), [std::num\\_put< \\_CharT, \\_Outiter >::put\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator<<()** [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ __n	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ __n	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ __n	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator>>()** [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __ios_type & (* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type & (* __pf) (__istream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or

- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

### operator>>() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

### operator>>() [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (

```

Integer arithmetic extractors.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::ios\\_base::goodbit](#), and [std::use\\_facet\(\)](#).

**operator>>()** [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\leftrightarrow$ __n	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\leftrightarrow$ __n	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\leftrightarrow$ __n	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>() [16/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>() [17/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**peek()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**put()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::put (
    char_type __c) [inherited]
```

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits](#)

**putback()**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::putback (
    char_type __c) [inherited]
```

Unextracting a single character.

## Parameters

<code>_↔</code>	The character to push back into the input stream.
<code>_c</code>	

## Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

## Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

## Parameters

<code>_↔</code>	Index into the array.
<code>_ix</code>	

## Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const [inline],
[nodiscard], [inherited]
```

Accessing the underlying buffer.

## Returns

The current stream buffer.

This does not change the state of the stream.

Referenced by `clear()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `imbue()`, `std::basic_istream< _CharT, _Traits >::operator>>()`,

`std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellp()`, and `std::ws()`.

## **rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (
    basic_streambuf<_CharT, _Traits> * __sb) [inherited]
```

Changing the underlying buffer.

### Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);           // ios == basic_ios<char>
```

References [clear\(\)](#).

## **rdstate()**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<char_type, traits_type>::bad()`, `clear()`, `std::basic_ios<char_type, traits_type>::eof()`, `std::basic_ios<char_type, traits_type>::fail()`, `std::basic_ios<char_type, traits_type>::good()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char_type, traits_type>::unget()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

## **read()**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction without delimiters.

## Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

## Returns

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

## Note

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**readsome()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

## Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

## Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**register\_callback()**

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

**seekg() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::failbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekg() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos) [inherited]
```

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#) and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**seekp()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**seekp()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    pos_type __pos) [inherited]
```

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**setf()** [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf()** [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

## Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), and [std::ws\(\)](#).

**sync()**

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellg()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References [std::ios\\_base::badbit](#), [std::ios\\_base::cur](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::in](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#).

## tellp()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp () [inherited]
```

Getting the current write position.

### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

## tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `copyfmt()`.

## tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

## unget()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

### Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `_M_gcount`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References `fmtflags`.

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< char_type, traits_type >::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of width().

**write()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n) [inherited]
```

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( ) [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.224.6 Member Data Documentation

#### M\_gcount

```
template<typename _CharT, typename _Traits>
```

```
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `get()`, `get()`, `get()`, `get()`, `getline()`, `ignore()`, `ignore()`, `ignore()`, `putback()`, `read()`, `readsome()`, and `unget()`.

#### adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

#### ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

#### badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::clear()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::ws()`, and `std::ws()`.

#### basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

#### beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

## binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↔filestreams.binary>.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::showmanyc\(\)](#).

## boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::noboolalpha\(\)](#).

## cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::imbue\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::seekoff\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#).

## dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

## end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::open\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#).

## eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_time\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::seekg\(\)](#), and [std::ws\(\)](#).

## failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), and [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_weekday\(\)](#).

std::time\_get< \_CharT, \_Inlter >::do\_get\_year(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< char\_type, traits\_type >::get(), std::time\_get< \_CharT, \_Inlter >::get(), std::basic\_istream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< \_CharT, \_Traits >::seekp(), and std::basic\_ostream< \_CharT, \_Traits >::seekp().

### fixed

const `fmtflags` std::ios\_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

### floatfield

const `fmtflags` std::ios\_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

### goodbit

const `iosstate` std::ios\_base::goodbit [static], [inherited]

Indicates all is well.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::num\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_year\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ws\(\)](#), and [std::ws\(\)](#).

### hex

const `fmtflags` std::ios\_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), and [std::hex\(\)](#).

### in

const `openmode` std::ios\_base::in [static], [inherited]

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::xsgetn\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

### internal

const `fmtflags` std::ios\_base::internal [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

### **left**

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::left\(\)](#).

### **oct**

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

### **out**

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::pbackfail\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekp\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#).

### **right**

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

### **scientific**

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

### **showbase**

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

### **showpoint**

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

### **showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**skipws**

const `fmtflags` `std::ios_base::skipws` [static], [inherited]

Skips leading white space before certain input operations.

Referenced by `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

**trunc**

const `openmode` `std::ios_base::trunc` [static], [inherited]

Truncate an existing stream when opening. Default for `ofstream`.

**unitbuf**

const `fmtflags` `std::ios_base::unitbuf` [static], [inherited]

Flushes output after each output operation.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`, `std::nounitbuf()`, and `std::unitbuf()`.

**uppercase**

const `fmtflags` `std::ios_base::uppercase` [static], [inherited]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

- `iosfwd`
- `istream`

**5.225 `std::basic_istream<_CharT, _Traits>` Class Template Reference**

- `__istream_type & operator>> (ios_base &(__pf)(ios_base &))`

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (short &__n)`
- `__istream_type & operator>> (unsigned short &__n)`
- `__istream_type & operator>> (int &__n)`
- `__istream_type & operator>> (unsigned int &__n)`
- `__istream_type & operator>> (long &__n)`
- `__istream_type & operator>> (unsigned long &__n)`
- `__istream_type & operator>> (long long &__n)`
- `__istream_type & operator>> (unsigned long long &__n)`
- `__istream_type & operator>> (float &__f)`
- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

## Friends

- class **sentry**

### 5.225.1 Detailed Description

```
template<typename __CharT, typename __Traits>
class std::basic_istream< __CharT, __Traits >
```

Template class **basic\_istream**.

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.

## 5.225.2 Member Typedef Documentation

`__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

## Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

`iostate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

`openmode`

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

### **seekdir**

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

## **5.225.3 Member Enumeration Documentation**

### **event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

## **5.225.4 Constructor & Destructor Documentation**

### **basic\_istream()**

```
template<typename _CharT, typename _Traits>  
std::basic_istream< _CharT, _Traits >::basic_istream (  
    __streambuf_type * __sb) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

### **~basic\_istream()**

```
template<typename _CharT, typename _Traits>  
virtual std::basic_istream< _CharT, _Traits >::~~basic_istream () [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

## **5.225.5 Member Function Documentation**

### **\_M\_getloc()**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_date\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_weekday\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::do\\_get\\_year\(\)](#), [std::num\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::time\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::time\\_get< \\_CharT, \\_Inlter >::get\(\)](#), and [std::time\\_put< \\_CharT, \\_Outlter >::put\(\)](#).

**bad()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#).

**clear()**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::unget\(\)](#), and [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#).

**copyfmt()**

```
template<typename _CharT, typename _Traits>
```

```
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

**fail()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by [std::basic\\_ios<char\\_type, traits\\_type>::operator bool\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type>::operator!\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#), and [std::regex\\_traits<\\_Ch\\_type>::value\(\)](#).

**fill()** [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::fill () const [inline], [nodiscard], [inherited]
Retrieves the empty character.
```

**Returns**

The current fill character.

It defaults to a space (' ') in the current locale.

Referenced by [copyfmt\(\)](#).

**fill()** [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::fill (
    char_type __ch) [inline], [inherited]
Sets a new empty character.
```

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator<<\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

**get()** [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
    void )
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**get()** [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb) [inline]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb,widen("\n"))`.

**get()** [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim)
```

Extraction into another streambuf.

## Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**get()** [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (
    char_type & __c)
```

Simple extraction.

## Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

## Returns

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

## Note

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**get()** [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n) [inline]
```

Simple multiple-character extraction.

**Parameters**

<a href="#"><code>__s</code></a>	Pointer to an array.
<a href="#"><code>__n</code></a>	Maximum number of characters to store in <code>s</code> .

**Returns**

`*this`

Returns `get(__s,__n,widen("\n"))`.

**get() [6/6]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim)
```

Simple multiple-character extraction.

**Parameters**

<a href="#"><code>__s</code></a>	Pointer to an array.
<a href="#"><code>__n</code></a>	Maximum number of characters to store in <code>__s</code> .
<a href="#"><code>__delim</code></a>	A "stop" character.

**Returns**

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, `failbit` is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::](#)

**getline() [1/3]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n) [inline]
```

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

\*this

Returns `getline(__s,__n,widen("\n"))`.

**getline()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim)
```

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

## Returns

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References `_M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**getline()** [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim)
```

Explicit specialization declarations, defined in `src/istream.cc`.

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

**good()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios<_CharT, _Traits>::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**ignore() [1/3]**

```
template<typename _CharT, typename _Traits>
```

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (  
    void )
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**ignore() [2/3]**

```
template<typename _CharT, typename _Traits>
```

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (  
    streamsize __n)
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::`

**ignore()** [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim)
```

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References `_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::`

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::init (
    basic_streambuf<_CharT, _Traits> * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios<char_type, traits_type>::basic_ios()`, and `std::basic_ostream<char_type, traits_type>::basic_ostream()`.

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

## Parameters

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

## Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References [iword\(\)](#).

Referenced by [iword\(\)](#).

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios<_CharT, _Traits>::narrow (
    char_type __c,
    char __dfault) const [inline], [inherited]
```

Squeezes characters.

## Parameters

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

## Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios<_CharT, _Traits>::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator"!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator>>()** [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __ios_type &(* __pf ) (__ios_type &)) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type &(* __pf ) (__istream_type &)) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb)
```

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_istream< _CharT, _Traits >::rdbuf()`, and `std::basic_istream< _CharT, _Traits >::setstate()`.

**operator>>()** [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>() [5/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    double & __f) [inline]
```

Floating point arithmetic extractors.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>() [6/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    float & __f) [inline]
```

Floating point arithmetic extractors.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>() [7/17]**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
    int & __n)
```

Integer arithmetic extractors.

**Parameters**

$\leftarrow$ _n	A variable of builtin integral type.
--------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::use_facet()`.

**operator>>() [8/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    ios_base &(* __pf ) (ios_base &)) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>() [9/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

$\leftarrow$ _n	A variable of builtin integral type.
--------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>() [10/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long double & __f) [inline]
```

Floating point arithmetic extractors.

**Parameters**

$\leftarrow$ $\leftarrow$ $\leftarrow$ $\leftarrow$ f	A variable of builtin floating point type.
---	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long long & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
    short & __n)
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::use_facet()`.

**operator>>()** [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned int & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long long & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    void *& __p) [inline]
```

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**peek()**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (
    void )
```

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::chrono::operator<<()`.

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**putback()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c)
```

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#).

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const [inline],
[nodiscard], [inherited]
```

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Referenced by [clear\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [imbue\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::ws\(\)](#).

**rddbuf() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rddbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rddbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rddbuf(p);           // ios == basic_ios<char>
```

References [clear\(\)](#).

**rdstate()**

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::bad\(\)](#), [clear\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::eof\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::fail\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::good\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#).

**read()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n)
```

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

References `_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**readsome()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n)
```

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called A here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters

- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::](#) and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

### register\_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

### seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir)
```

Changing the current read position.

#### Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

#### Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::](#) and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

### seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos)
```

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::failbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf()** [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf()** [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::ws()`.

**sync()**

```
template<typename _CharT, typename _Traits>
int std::basic_istream<_CharT, _Traits>::sync (
    void )
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellg()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void )
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**tie() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `copyfmt()`.

**tie() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**unget()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void )
```

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `_M_gcount`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References `fmtflags`.

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios<char_type, traits_type>::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width() [1/2]**

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( ) [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.225.6 Member Data Documentation****`_M_gcount`**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by [get\(\)](#), [get\(\)](#), [get\(\)](#), [get\(\)](#), [getline\(\)](#), [ignore\(\)](#), [ignore\(\)](#), [ignore\(\)](#), [putback\(\)](#), [read\(\)](#), [readsome\(\)](#), and [unget\(\)](#).

**adjustfield**

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::internal\(\)](#), [std::left\(\)](#), and [std::right\(\)](#).

**app**

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#).

**ate**

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**badbit**

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::clear()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::tellg()`, and `std::ws()`.

**basefield**

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**beg**

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**binary**

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**boolalpha**

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**cur**

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**dec**

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#).

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_time\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::unget\(\)](#), and [std::ws\(\)](#).

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type >::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits >::seekp\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits >::seekp\(\)](#).

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::ws()`.

## hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, and `std::hex()`.

## in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

## internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

## left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, and `std::left()`.

## oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

## out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

`std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

### right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

### scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

### showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _Outlttr >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

### showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

### showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by `std::noshowpos()`, and `std::showpos()`.

### skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

### trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

### unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::~~sentry()`, `std::nounitbuf()`, and `std::unitbuf()`.

### uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by `std::num_put< _CharT, _Outlttr >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

### Extractors

All the *operator>>* functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [\\_\\_istream\\_type](#) & **operator>>** (bool &\_\_n)
- [\\_\\_istream\\_type](#) & **operator>>** (short &\_\_n)

- `__istream_type & operator>>` (long long &\_\_n)
- `__istream_type & operator>>` (unsigned long long &\_\_n)

- `__istream_type & operator>>` (float &\_\_f)
- `__istream_type & operator>>` (double &\_\_f)
- `__istream_type & operator>>` (long double &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

### 5.226.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_istream<_CharT, _Traits, _Alloc >
```

Controlling input for std::string.

#### Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits</a> <_CharT>.
<a href="#">_Alloc</a>	Allocator type, defaults to <a href="#">allocator</a> <_CharT>.

This class supports reading from objects of type [std::basic\\_string](#), using the inherited functions from [std::basic\\_istream](#). To control the associated sequence, an instance of [std::basic\\_stringbuf](#) is used, which this page refers to as *sb*.

### 5.226.2 Member Typedef Documentation

#### [\\_\\_num\\_put\\_type](#)

```
template<typename _CharT, typename _Traits>
typedef num\_put<_CharT, ostreambuf\_iterator<_CharT, _Traits> > std::basic\_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

**event\_callback**

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

**Parameters**

<code>_↔ _e</code>	One of the members of the event enum.
<code>_↔ _b</code>	Reference to the <code>ios_base</code> object.
<code>_↔ _i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**iostate**

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**openmode**

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**seekdir**

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

### 5.226.3 Member Enumeration Documentation

#### event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

erase\_event is used during ~ios() and copyfmt(). imbue\_event is used during imbue(). copyfmt\_event is used during copyfmt().

### 5.226.4 Constructor & Destructor Documentation

#### basic\_istream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream<_CharT, _Traits, _Alloc>::basic_istream () [inline]
```

Default constructor starts with an empty string buffer.

Initializes sb using in, and passes &sb to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

#### basic\_istream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream<_CharT, _Traits, _Alloc>::basic_istream (
    ios_base::openmode __mode) [inline], [explicit]
```

Starts with an empty string buffer.

#### Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

ios\_base::in is automatically included in `__mode`.

Initializes sb using `__mode|in`, and passes &sb to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

#### basic\_istream() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream<_CharT, _Traits, _Alloc>::basic_istream (
    const __string_type & __str,
    ios_base::openmode __mode = ios_base::in) [inline], [explicit]
```

Starts with an existing string buffer.

#### Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

ios\_base::in is automatically included in `mode`.

Initializes sb using `str` and `mode|in`, and passes &sb to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

#### ~basic\_istream()

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream<_CharT, _Traits, _Alloc>::~~basic_istream () [inline]
```

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

### 5.226.5 Member Function Documentation

#### **`_M_getloc()`**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::time\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::time\\_put<\\_CharT, \\_OutIter>::put\(\)](#).

#### **`bad()`**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic\_ios<\_CharT, \_Traits>::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

##### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#).

#### **`clear()`**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic\_ios<\_CharT, \_Traits>::clear (  
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

##### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios<char\\_type, traits\\_type>::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type>::unget\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

#### **`copyfmt()`**

```
template<typename _CharT, typename _Traits>
```

```
basic\_ios<\_CharT, \_Traits> & std::basic\_ios<\_CharT, \_Traits>::copyfmt (  
    const basic\_ios<\_CharT, \_Traits> & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

##### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::eof() const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::exceptions() const [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::exceptions (
    iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
```

```
f.setstate (std::ios_base::badbit);

std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}
```

### fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
Fast error checking.
```

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::operator bool\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::regex\\_traits< \\_Ch\\_type >::value\(\)](#).

### fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard], [inherited]
Retrieves the empty character.
```

#### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Referenced by [copyfmt\(\)](#).

### fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

#### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

### flags() [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator<<\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**flags() [2/2]**

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline], [inherited]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

**get() [1/6]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**get() [2/6]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

`*this`

Returns `get(__sb,widen("\n"))`.

**get() [3/6]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**get() [4/6]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c) [inherited]
```

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**get()** [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

**Parameters**

<a href="#"> <code>__s</code></a>	Pointer to an array.
<a href="#"> <code>__n</code></a>	Maximum number of characters to store in <code>s</code> .

**Returns**

`*this`

Returns `get(__s,__n,widen("\n"))`.

**get()** [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::](#)

**getline()** [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

<a href="#"></a> <code>__s</code>	A character array in which to store the data.
<a href="#"></a> <code>__n</code>	Maximum number of characters to extract.

**Returns**

`*this`

Returns `getline(__s,__n,widen("\n"))`.

**getline()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

**Returns**

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case `eofbit` is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case `failbit` is set in the stream error state

If no characters are extracted, `failbit` is set. (An empty line of input should therefore not cause `failbit` to be set.)

In any case, a null character is stored in the next location in the array.

References [\\_M\\_gcount](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetc\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::](#)

**getline()** [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::basic_ios<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

**good()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**ignore()** [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**ignore()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::rdbuf()`.

**ignore()** [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim) [inherited]
```

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::](#)

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::imbue\(\)](#), and [rdbuf\(\)](#).

Referenced by [std::chrono::operator<<\(\)](#).

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::basic\\_ios\(\)](#), and [std::basic\\_ostream< char\\_type, traits\\_type >::basic\\_ostream\(\)](#).

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References [iword\(\)](#).

Referenced by [iword\(\)](#).

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios<_CharT, _Traits>::narrow (
    char_type __c,
    char __default) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios<_CharT, _Traits>::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator"!()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**operator>>() [1/17]**

```
template<typename _CharT, typename _Traits>
```

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __ios_type &(* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

**operator>>() [2/17]**

```
template<typename _CharT, typename _Traits>
```

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type &(* __pf) (__istream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

**operator>>() [3/17]**

```
template<typename _CharT, typename _Traits>
```

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**operator>>() [4/17]**

```
template<typename _CharT, typename _Traits>
```

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

$\_ \leftarrow$	A variable of builtin integral type.
$\_n$	

## Returns

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

$\leftarrow$	A variable of builtin floating point type.
$\_ \leftarrow$	
$\leftarrow$	
$\_ \leftarrow$	
$f$	

## Returns

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

$\leftarrow$	A variable of builtin floating point type.
$\_ \leftarrow$	
$\leftarrow$	
$\_ \leftarrow$	
$f$	

## Returns

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    int & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

$\leftarrow$	A variable of builtin integral type.
$\leftarrow n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator>>()** [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

$\leftarrow$	A variable of builtin integral type.
$\leftarrow n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

$\leftarrow$	A variable of builtin floating point type.
$\leftarrow$	
$\leftarrow$	
$\leftarrow f$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::ios\\_base::goodbit](#), and [std::use\\_facet\(\)](#).

**operator>>()** [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\leftarrow$	A variable of builtin integral type.
$n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\leftarrow$	A variable of builtin integral type.
$n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\leftarrow$	A variable of builtin integral type.
$n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**operator>>()** [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**peek()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::chrono::operator<<()`.

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**putback()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#).

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

**rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type * std::basic_istream< _CharT, _Traits, _Alloc >::rdbuf () const [inline],
[nodiscard]
```

Accessing the underlying buffer.

**Returns**

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

**rdstate()**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< char_type, traits_type >::bad()`, `clear()`, `std::basic_ios< char_type, traits_type >::eof()`, `std::basic_ios< char_type, traits_type >::fail()`, `std::basic_ios< char_type, traits_type >::good()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::unget()`.

**read()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
------------------	--------------------

<code>__n</code>	Maximum number of characters to store.
------------------	--

**Returns**

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**readsome()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream<_CharT, _Traits>::readsome (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the `streambuf`'s buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the `streambuf`.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**register\_callback()**

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

**seekg() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**seekg() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos) [inherited]
```

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

## Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::failbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf()** [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf()** [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

## Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl & mask`. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::ws()`.

**str()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_istreamstream<_CharT, _Traits, _Alloc>::str () const & [inline],
[nodiscard]
```

Copying out the string buffer.

**Returns**

`rdbuf() -> str()`

**str()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_istreamstream<_CharT, _Traits, _Alloc>::str (
    const __string_type & __s) [inline]
```

Setting a new buffer.

**Parameters**

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rdbuf() -> str(s)`.

**sync()**

```
template<typename _CharT, typename _Traits>
int std::basic_istream<_CharT, _Traits>::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellg()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

**Returns**

A file position object.

If fail() is not false, returns pos\_type(-1) to indicate failure. Otherwise returns rdbuf()->pubseekoff(0, cur, in).

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to gcount(). At variance with putback, unget and seekg, eofbit is not cleared first.

References [std::ios\\_base::badbit](#), [std::ios\\_base::cur](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::in](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**tie() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [copyfmt\(\)](#).

**tie() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**ungetc()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ungetc (
    void ) [inherited]
```

Unextracting the previous character.

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `_M_gcount`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References `fmtflags`.

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< char_type, traits_type >::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( ) [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.226.6 Member Data Documentation****\_M\_gcount**

```
template<typename _CharT, typename _Traits>
```

```
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `get()`, `get()`, `get()`, `get()`, `getline()`, `ignore()`, `ignore()`, `ignore()`, `putback()`, `read()`, `readsome()`, and `unset()`.

**adjustfield**

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**app**

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**ate**

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**badbit**

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::clear()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::tellg()`, and `std::ws()`.

**basefield**

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**beg**

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**binary**

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**boolalpha**

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**cur**

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**dec**

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char_type, traits_type >::get()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< char_type, traits_type >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::seekg()`, and `std::ws()`.

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char_type, traits_type >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::seekp()`.

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), and [std::ws\(\)](#).

**hex**

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::hex\(\)](#).

**in**

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekpos\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::showmanyc\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::underflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::xsgetn\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsgetn\(\)](#).

**internal**

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**left**

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.) Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, and `std::left()`.

### **oct**

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

### **out**

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

### **right**

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

### **scientific**

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

### **showbase**

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

### **showpoint**

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

### **showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by `std::noshowpos()`, and `std::showpos()`.

### **skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

**trunc**

const [openmode](#) std::ios\_base::trunc [static], [inherited]  
Truncate an existing stream when opening. Default for ofstream.

**unitbuf**

const [fmtflags](#) std::ios\_base::unitbuf [static], [inherited]  
Flushes output after each output operation.  
Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**uppercase**

const [fmtflags](#) std::ios\_base::uppercase [static], [inherited]  
Replaces certain lowercase letters with their uppercase equivalents in generated output.  
Referenced by [std::num\\_put< \\_CharT, \\_Outiter >::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).  
The documentation for this class was generated from the following files:

  - \_\_ostream\_type & `operator<<` (ios\_base &(\*\_\_pf)(ios\_base &))

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- \_\_ostream\_type & `operator<<` (long \_\_n)
- \_\_ostream\_type & `operator<<` (unsigned long \_\_n)
- \_\_ostream\_type & `operator<<` (bool \_\_n)
- \_\_ostream\_type & `operator<<` (short \_\_n)
- \_\_ostream\_type & `operator<<` (unsigned short \_\_n)

- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`

- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

### 5.227.1 Detailed Description

**template<typename \_CharT, typename \_Traits>**  
**class std::basic\_ofstream<\_CharT, \_Traits>**

Controlling output for files.

#### Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits&lt;_CharT&gt;</a> .

This class supports reading from named files, using the inherited functions from [std::basic\\_ostream](#). To control the associated sequence, an instance of [std::basic\\_filebuf](#) is used, which this page refers to as *sb*.

### 5.227.2 Member Typedef Documentation

#### [\\_\\_num\\_get\\_type](#)

```
template<typename _CharT, typename _Traits>
typedef num\_get<\_CharT, istreambuf\_iterator<\_CharT, \_Traits>> std::basic\_ios<\_CharT, \_Traits>
::__num_get_type [inherited]
```

These are non-standard types.

#### [event\\_callback](#)

```
typedef void(* std::ios\_base::event\_callback) (event __e, ios\_base &__b, int __i) [inherited]
```

The type of an event callback function.

#### Parameters

<a href="#">_e</a>	One of the members of the event enum.
<a href="#">_b</a>	Reference to the <a href="#">ios_base</a> object.
<a href="#">_i</a>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several [ios\\_base](#) and [basic\\_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

#### [iostate](#)

```
typedef \_Ios\_Iostate std::ios\_base::iostate [inherited]
```

This is a bitmask type.

[\\_Ios\\_Iostate](#) is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type [iostate](#) are:

- [badbit](#)

- eofbit
- failbit
- goodbit

### openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

### seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

## 5.227.3 Member Enumeration Documentation

### event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

## 5.227.4 Constructor & Destructor Documentation

### basic\_ofstream() [1/4]

```
template<typename _CharT, typename _Traits>  
std::basic_ofstream< _CharT, _Traits >::basic_ofstream () [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

**basic\_ofstream()** [2/4]

```
template<typename _CharT, typename _Traits>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
    const char * __s,
    ios_base::openmode __mode = ios_base::out) [inline], [explicit]
```

Create an output file stream.

**Parameters**

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

ios\_base::out is automatically included in `__mode`.

**basic\_ofstream()** [3/4]

```
template<typename _CharT, typename _Traits>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::out) [inline], [explicit]
```

Create an output file stream.

**Parameters**

<code>__s</code>	std::string specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

ios\_base::out is automatically included in `__mode`.

**basic\_ofstream()** [4/4]

```
template<typename _CharT, typename _Traits>
template<typename _Path, typename _Require = _If_fs_path<_Path>>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::out) [inline]
```

Create an output file stream.

**Parameters**

<code>__s</code>	filesystem::path specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

ios\_base::out is automatically included in `__mode`.

**~basic\_ofstream()**

```
template<typename _CharT, typename _Traits>
std::basic_ofstream< _CharT, _Traits >::~~basic_ofstream () [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

### 5.227.5 Member Function Documentation

#### **`_M_getloc()`**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get<\\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter >::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter >::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter >::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter >::do\\_get\\_year\(\)](#), [std::num\\_put<\\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter >::get\(\)](#), and [std::time\\_put<\\_CharT, \\_Outlter >::put\(\)](#).

#### **`bad()`**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic\_ios<_CharT, _Traits >::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::sentry\(\)](#).

#### **`clear()`**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic\_ios<_CharT, _Traits >::clear (
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios<char\\_type, traits\\_type >::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type >::unget\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits >::unget\(\)](#).

#### **`close()`**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic\_ofstream<_CharT, _Traits >::close () [inline]
```

Close the file.

Calls [std::basic\\_filebuf::close\(\)](#). If that function fails, [failbit](#) is set in the stream's error state.

**copyfmt()**

```
template<typename _CharT, typename _Traits>
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
    const basic_ios<_CharT, _Traits> & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
```

```
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

**fail()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
Fast error checking.
```

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::operator bool\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::regex\\_traits< \\_Ch\\_type >::value\(\)](#).

**fill()** [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard], [inherited]
Retrieves the empty character.
```

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Referenced by [copyfmt\(\)](#).

**fill()** [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator<<\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**flush()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::flush\(\)](#).

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale::global()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**good()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [nodiscard], [inherited]
Fast error checking.
```

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::__detail::operator>>()`.

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< char_type, traits_type >::basic_ios()`, and `std::basic_ostream< char_type, traits_type >::basic_ostream()`.

**is\_open()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ofstream< _CharT, _Traits >::is_open () [inline], [nodiscard]
```

Wrapper to test for an open file.

**Returns**

`rdbuf() -> is_open()`

**word()**

```
long & std::ios_base::word (  
    int __ix)  [inline], [inherited]
```

Access to integer array.

## Parameters

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

## Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References [iword\(\)](#).

Referenced by [iword\(\)](#).

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default) const [inline], [inherited]
```

Squeezes characters.

## Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

## Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**open()** [1/3]

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path< _Path, void > std::basic_ofstream< _CharT, _Traits >::open (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::out) [inline]
```

Opens an external file.

## Parameters

<code>__s</code>	The name of the file, as a <code>filesystem::path</code> .
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

**open()** [2/3]

```
template<typename _CharT, typename _Traits>
void std::basic_ofstream< _CharT, _Traits >::open (
    const char * __s,
    ios_base::openmode __mode = ios_base::out) [inline]
```

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

**open()** [3/3]

```
template<typename _CharT, typename _Traits>
void std::basic_ofstream< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::out) [inline]
```

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out)`. If that function fails, `failbit` is set in the stream's error state.

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**operator!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**operator<<()** [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ofstream< _CharT, _Traits >::operator<< (
    __ios_type &(* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<()** [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ofstream<_CharT, _Traits>::operator<< (
    __ostream_type & (* __pf) (__ostream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::operator<< (
    __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**operator<<()** [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ofstream<_CharT, _Traits>::operator<< (
    bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ofstream<_CharT, _Traits>::operator<< (
    const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

**Parameters**

<code>_↔</code> <code>_p</code>	A variable of pointer type.
------------------------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [6/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

<code>↔</code> <code>_↔</code> <code>↔</code> <code>_↔</code> <code>f</code>	A variable of builtin floating point type.
--	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [7/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

<code>↔</code> <code>_↔</code> <code>↔</code> <code>_↔</code> <code>f</code>	A variable of builtin floating point type.
--	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [8/17]

```
template<typename _CharT, typename _Traits>
basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::operator<< (
    int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftarrow$	A variable of builtin integral type.
$\leftarrow n$	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `io manip` header.

**operator<<()** [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftarrow$	A variable of builtin integral type.
$\leftarrow n$	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

$\leftarrow$	A variable of builtin floating point type.
$\leftarrow$	
$\leftarrow$	
$\leftarrow$	
$\leftarrow f$	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ofstream<_CharT, _Traits>::operator<< (
    long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [13/17]

```
template<typename _CharT, typename _Traits>
basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::operator<< (
    short __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [basic\\_ofstream\(\)](#), [std::ios\\_base::badbit](#), [std::ostreambuf\\_iterator<\\_CharT, \\_Traits>::failed\(\)](#), [std::ios\\_base::goodbit](#), [std::num\\_put<\\_CharT, \\_OutTiter>::put\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator<<()** [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ofstream<_CharT, _Traits>::operator<< (
    unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**put()**

```
template<typename _CharT, typename _Traits>
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::put (
    char_type __c) [inherited]
```

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits](#)

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pwd` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

**rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_ofstream< _CharT, _Traits >::rdbuf () const [inline], [nodiscard]
```

Accessing the underlying buffer.

**Returns**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

**rdstate()**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< char_type, traits_type >::bad()`, `clear()`, `std::basic_ios< char_type, traits_type >::eof()`,

`std::basic_ios< char_type, traits_type >::fail()`, `std::basic_ios< char_type, traits_type >::good()`, `std::basic_istream< _CharT, _Traits >::`

`std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char_type, traits_type >::`

and `std::basic_istream< _CharT, _Traits >::unget()`.

**register\_callback()**

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

**seekp() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::seekp (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

References `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`,

and `std::basic_ios< _CharT, _Traits >::setstate()`.

**seekp() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::seekp (
    pos_type __pos) [inherited]
```

Changing the current write position.

## Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

## Returns

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets `failbit`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf()** [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf()** [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

## Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by `std::basic_ofstream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ofstream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ofstream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ofstream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ofstream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::ws()`.

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellp()**

```
template<typename _CharT, typename _Traits>
basic_ofstream< _CharT, _Traits >::pos_type std::basic_ofstream< _CharT, _Traits >::tellp () [inherited]
```

Getting the current write position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ofstream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

## Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_ofstream< _CharT, _Traits >::sentry::sentry()`, and `copyfmt()`.

**tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References [fmtflags](#).

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< char_type, traits_type >::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**write()**

```
template<typename _CharT, typename _Traits>
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n) [inherited]
```

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**xalloc()**

`static int std::ios_base::xalloc () throw ( ) [static], [inherited]`  
Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.227.6 Member Data Documentation****adjustfield**

`const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**app**

`const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**ate**

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**badbit**

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::clear()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::ws()`, and `std::ws()`.

**basefield**

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**beg**

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekpos\(\)](#).

**binary**

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↵filestreams.binary>.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#).

**boolalpha**

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract bool in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), and [std::noboolalpha\(\)](#).

**cur**

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::imbue\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

**dec**

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#).

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_date\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_time\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::seekg\(\)](#), and [std::ws\(\)](#).

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#).

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ws\(\)](#), and [std::ws\(\)](#).

**hex**

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::hex\(\)](#).

**in**

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#).

`std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

### internal

const `fmtflags` `std::ios_base::internal` [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

### left

const `fmtflags` `std::ios_base::left` [static], [inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, and `std::left()`.

### oct

const `fmtflags` `std::ios_base::oct` [static], [inherited]

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

### out

const `openmode` `std::ios_base::out` [static], [inherited]

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

### right

const `fmtflags` `std::ios_base::right` [static], [inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

### scientific

const `fmtflags` `std::ios_base::scientific` [static], [inherited]

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

### showbase

const `fmtflags` `std::ios_base::showbase` [static], [inherited]

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

### showpoint

const `fmtflags` `std::ios_base::showpoint` [static], [inherited]

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**trunc**

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

**unitbuf**

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**uppercase**

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type & put (char_type __c)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`
- `operator bool () const`
- `bool operator! () const`

**Friends**

- class `sentry`

**5.228.1 Detailed Description**

```
template<typename _CharT, typename _Traits>
class std::basic_ostream<_CharT, _Traits>
```

Template class `basic_ostream`.

**Template Parameters**

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual output.

**5.228.2 Member Typedef Documentation****`__num_get_type`**

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>
::__num_get_type [inherited]
```

These are non-standard types.

**`event_callback`**

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

**Parameters**

<code>_↔ _e</code>	One of the members of the event enum.
<code>_↔ _b</code>	Reference to the <code>ios_base</code> object.
<code>_↔ _i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**istate**

```
typedef _Ios_Iostate std::ios_base::istate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `istate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**openmode**

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**seekdir**

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

### 5.228.3 Member Enumeration Documentation

#### event

enum `std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

### 5.228.4 Constructor & Destructor Documentation

#### basic\_ostream()

```
template<typename _CharT, typename _Traits>
std::basic_ostream< _CharT, _Traits >::basic_ostream (
    __streambuf_type * __sb) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Referenced by `operator<<()`.

#### ~basic\_ostream()

```
template<typename _CharT, typename _Traits>
virtual std::basic_ostream< _CharT, _Traits >::~~basic_ostream () [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

### 5.228.5 Member Function Documentation

#### \_M\_getloc()

const `locale` & `std::ios_base::_M_getloc () const` [inline], [inherited]

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, and `std::time_put< _CharT, _Outlter >::put()`.

#### bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**clear()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::seekg\(\)](#), and [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#).

**copyfmt()**

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions()** [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::exceptions (
    iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios\_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

**fail()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::fail () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by [std::basic\\_ios<char\\_type, traits\\_type>::operator bool\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type>::operator!\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::tellg\(\)](#), and [std::regex\\_traits<\\_Ch\\_type>::value\(\)](#).

**fill()** [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::fill () const [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space (' ') in the current locale.

Referenced by [copyfmt\(\)](#).

**fill()** [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator<<\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**flush()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush ()
```

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::pubsync()`.

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::chrono::operator<<()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

**good()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< char_type, traits_type >::basic_ios()`, and `std::basic_ostream< char_type, traits_type >::basic_ostream()`.

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References `iword()`.

Referenced by `iword()`.

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __dfault) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**operator bool()**

```
template<typename _CharT, typename _Traits>
```

```
std::basic_ios<_CharT, _Traits>::operator bool () const [inline], [explicit], [nodiscard],  
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator!()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios<_CharT, _Traits>::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator<<() [1/17]**

```
template<typename _CharT, typename _Traits>
```

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (  
__ios_type &(* __pf) (__ios_type &)) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<() [2/17]**

```
template<typename _CharT, typename _Traits>
```

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (  
__ostream_type &(* __pf) (__ostream_type &)) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<() [3/17]**

```
template<typename _CharT, typename _Traits>
```

```
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (  
__streambuf_type * __sb)
```

Extracting from another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted),  
or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

#### **operator<<()** [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    bool __n) [inline]
```

Integer arithmetic inserters.

##### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

##### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

#### **operator<<()** [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    const void * __p) [inline]
```

Pointer arithmetic inserters.

##### Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

##### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

#### **operator<<()** [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f) [inline]
```

Floating point arithmetic inserters.

## Parameters

<code>↔</code>	A variable of builtin floating point type.
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>f</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    float __f) [inline]
```

Floating point arithmetic inserters.

## Parameters

<code>↔</code>	A variable of builtin floating point type.
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>f</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    int __n)
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(* __pf ) (ios_base &)) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<()** [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f) [inline]
```

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n) [inline]
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    short __n)
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [basic\\_ostream\(\)](#), [std::ios\\_base::badbit](#), [std::ostreambuf\\_iterator<\\_CharT, \\_Traits>::failed\(\)](#), [std::ios\\_base::goodbit](#), [std::num\\_put<\\_CharT, \\_Outiter>::put\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator<<()** [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    unsigned int __n) [inline]
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    unsigned long __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

$\_↔$	A variable of builtin integral type.
$\_n$	

**Returns**

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [16/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

$\_↔$	A variable of builtin integral type.
$\_n$	

**Returns**

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [17/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

$\_↔$	A variable of builtin integral type.
$\_n$	

**Returns**

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**precision() [1/2]**

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::chrono::operator<<()`.

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of precision().

**put()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c)
```

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

\*this

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>](#)

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const [inline],
[nodiscard], [inherited]
```

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Referenced by [clear\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [imbue\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::ws\(\)](#).

**rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

**rdstate()**

```
template<typename _CharT, typename _Traits>
ios_state std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<char_type, traits_type>::bad()`, `clear()`, `std::basic_ios<char_type, traits_type>::eof()`,

`std::basic_ios<char_type, traits_type>::fail()`, `std::basic_ios<char_type, traits_type>::good()`, `std::basic_istream<_CharT, _Traits>::`

`std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char_type, traits_type>::`

and `std::basic_istream<_CharT, _Traits>::unget()`.

**register\_callback()**

```
void std::ios_base::register_callback (
    event_callback __fn,
```

```
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

**seekp() [1/2]**

```
template<typename _CharT, typename _Traits>
```

```
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
```

```
    off_type __off,
```

```
    ios_base::seekdir __dir)
```

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`,

and `std::basic_ios<_CharT, _Traits>::setstate()`.

**seekp() [2/2]**

```
template<typename _CharT, typename _Traits>
```

```
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
```

```
    pos_type __pos)
```

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets `failbit`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf() [1/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf() [2/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::ws()`.

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellp()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp ()
```

Getting the current write position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

## Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `copyfmt()`.

**tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References [fmtflags](#).

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< char_type, traits_type >::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**write()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::write (
    const char_type * __s,
    streamsize __n)
```

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**xalloc()**

`static int std::ios_base::xalloc () throw ( ) [static], [inherited]`  
Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.228.6 Member Data Documentation****adjustfield**

`const fmtflags std::ios_base::adjustfield [static], [inherited]`  
A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.  
Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**app**

`const openmode std::ios_base::app [static], [inherited]`  
Seek to end before each write.  
Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**ate**

`const openmode std::ios_base::ate [static], [inherited]`  
Open and seek to end immediately after opening.  
Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**badbit**

`const iostate std::ios_base::badbit [static], [inherited]`  
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).  
Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::clear()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::ws()`, and `std::ws()`.

**basefield**

`const fmtflags std::ios_base::basefield [static], [inherited]`  
A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.  
Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**beg**

const `seekdir` std::ios\_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekpos\(\)](#).

**binary**

const `openmode` std::ios\_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↵filestreams.binary>.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#).

**boolalpha**

const `fmtflags` std::ios\_base::boolalpha [static], [inherited]

Insert/extract bool in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), and [std::noboolalpha\(\)](#).

**cur**

const `seekdir` std::ios\_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::imbue\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

**dec**

const `fmtflags` std::ios\_base::dec [static], [inherited]

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**end**

const `seekdir` std::ios\_base::end [static], [inherited]

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#).

**eofbit**

const `istate` std::ios\_base::eofbit [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_date\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_time\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::seekg\(\)](#), and [std::ws\(\)](#).

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#).

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ws\(\)](#), and [std::ws\(\)](#).

**hex**

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::hex\(\)](#).

**in**

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#).

`std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

### internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

### left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, and `std::left()`.

### oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

### out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`,

`std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`,

`std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekp()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

### scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

### showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::noshowbase()`, and `std::showbase()`.

### showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**trunc**

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

**unitbuf**

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**uppercase**

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (bool \_\_n)

- [\\_\\_ostream\\_type](#) & [operator<<](#) (float \_\_f)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the [sentry documentation](#) for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

### 5.229.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>  
class std::basic_ostringstream< _CharT, _Traits, _Alloc >
```

Controlling output for std::string.

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .

This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

## 5.229.2 Member Typedef Documentation

`__num_get_type`

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_get_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

## Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

`iostate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

`openmode`

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

### seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

## 5.229.3 Member Enumeration Documentation

### event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

## 5.229.4 Constructor & Destructor Documentation

### basic\_ostringstream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
```

```
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream () [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

### basic\_ostringstream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
```

```
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (  
    ios_base::openmode __mode) [inline], [explicit]
```

Starts with an empty string buffer.

#### Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

`ios_base::out` is automatically included in `mode`.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

**basic\_ostringstream()** [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
    const __string_type & __str,
    ios_base::openmode __mode = ios_base::out) [inline], [explicit]
```

Starts with an existing string buffer.

**Parameters**

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes *sb* using *str* and *mode*, and passes *&sb* to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

**~basic\_ostringstream()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::~~basic_ostringstream () [inline]
```

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

**5.229.5 Member Function Documentation****\_M\_getloc()**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_date()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_weekday()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::num_put<_CharT, _Outlter>::do_put()`, `std::time_put<_CharT, _Outlter>::do_put()`, `std::time_get<_CharT, _Inlter>::get()`, and `std::time_put<_CharT, _Outlter>::put()`.

**bad()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other `iostate` flags may also be set.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`.

**clear()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

## Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios<char\\_type, traits\\_type>::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type>::unget\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

**copyfmt()**

```
template<typename _CharT, typename _Traits>
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
    const basic_ios<_CharT, _Traits> & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

## Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

## Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::eof () const [inline], [nodiscard], [inherited]
```

Fast error checking.

## Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

**exceptions()** [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::exceptions () const [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

## Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions()** [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

**fail()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Referenced by `std::basic_ios< char_type, traits_type >::operator bool()`, `std::basic_ios< char_type, traits_type >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellg()`, and `std::regex_traits< _Ch_type >::value()`.

**fill()** [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space (' ') in the current locale.

Referenced by `copyfmt()`.

**fill()** [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

**flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::chrono::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, and `std::operator>>()`.

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References [fmtflags](#).

**flush()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

`*this`

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::flush\(\)](#).

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::basic_ios<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

**good()**

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios<_CharT, _Traits>::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**imbue()**

```
template<typename _CharT, typename _Traits>
```

```
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
```

```
void std::basic_ios<_CharT, _Traits>::init (
    basic_streambuf<_CharT, _Traits> * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios<char_type, traits_type>::basic_ios()`, and `std::basic_ostream<char_type, traits_type>::basic_ostream()`.

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References [iword\(\)](#).

Referenced by [iword\(\)](#).

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios<_CharT, _Traits>::narrow (
    char_type __c,
    char __dfault) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios<_CharT, _Traits>::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator"!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

**operator<<() [1/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(* __pf ) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<() [2/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(* __pf ) (__ostream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<() [3/17]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**operator<<() [4/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

$\_↔$	A variable of builtin integral type.
$\_n$	

## Returns

$\_this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

## Parameters

$\_↔$	A variable of pointer type.
$\_p$	

## Returns

$\_this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

$↔$	A variable of builtin floating point type.
$\_↔$	
$↔$	
$\_↔$	
$f$	

## Returns

$\_this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin floating point type.
$\_ \leftrightarrow$	
$\leftrightarrow$	
$\_ \leftrightarrow$	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [8/17]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_ n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<() [9/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `io manip` header.

**operator<<() [10/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_ n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

↔	A variable of builtin floating point type.
↔	
↔	
↔	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

↔	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    short __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

↔	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

References [basic\\_ostream\(\)](#), [std::ios\\_base::badbit](#), [std::ostreambuf\\_iterator<\\_CharT, \\_Traits>::failed\(\)](#), [std::ios\\_base::goodbit](#), [std::num\\_put<\\_CharT, \\_Outiter>::put\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator<<()** [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
$n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
$n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
$n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::chrono::operator<<()`.

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**put()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (
    char_type __c) [inherited]
```

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

\*this

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits](#)

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekp() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
    pos_type __pos) [inherited]
```

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf() [1/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf() [2/2]**

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::ws()`.

**str() [1/2]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_ostringstream<_CharT, _Traits, _Alloc>::str () const & [inline],
[nodiscard]
```

Copying out the string buffer.

**Returns**

`rdbuf() -> str()`

**str() [2/2]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_ostringstream<_CharT, _Traits, _Alloc>::str (
    const __string_type & __s) [inline]
```

Setting a new buffer.

**Parameters**

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rdbuf() -> str(s)`.

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (  
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tell()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp () [inherited]
```

Getting the current write position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`

**tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

## Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `copyfmt()`.

**tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

## Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

## Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References [fmtflags](#).

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
<code>__C</code>	

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::fill\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), and [std::tr2::operator>>\(\)](#).

**width() [1/2]**

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_put< \\_CharT, \\_Outiter >::do\\_put\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

**width() [2/2]**

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

## Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

## Returns

The previous value of width().

**write()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n) [inherited]
```

Character string insertion.

## Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

## Returns

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

## Note

This function is not overloaded on signed char and unsigned char.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( ) [static], [inherited]
```

Access to unique indices.

## Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.229.6 Member Data Documentation

#### adjustfield

const `fmtflags` `std::ios_base::adjustfield` [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### app

const `openmode` `std::ios_base::app` [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

#### ate

const `openmode` `std::ios_base::ate` [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

#### badbit

const `iostate` `std::ios_base::badbit` [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char_type, traits_type >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< char_type, traits_type >::ws()`, and `std::ws()`.

#### basefield

const `fmtflags` `std::ios_base::basefield` [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

#### beg

const `seekdir` `std::ios_base::beg` [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

#### binary

const `openmode` `std::ios_base::binary` [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**boolalpha**

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract bool in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), and [std::noboolalpha\(\)](#).

**cur**

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::imbue\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

**dec**

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#).

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_date\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_time\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::seekg\(\)](#), and [std::ws\(\)](#).

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_weekday\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< char\\_type, traits\\_type >::get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#).

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), and [std::ws\(\)](#).

**hex**

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::hex\(\)](#).

**in**

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekpos\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::showmanyc\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::underflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::xsgetn\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsgetn\(\)](#).

**internal**

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**left**

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.) Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, and `std::left()`.

### **oct**

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

### **out**

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

### **right**

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

### **scientific**

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

### **showbase**

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

### **showpoint**

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

### **showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by `std::noshowpos()`, and `std::showpos()`.

### **skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

**trunc**

const [openmode](#) std::ios\_base::trunc [static], [inherited]  
 Truncate an existing stream when opening. Default for ofstream.

**unitbuf**

const [fmtflags](#) std::ios\_base::unitbuf [static], [inherited]  
 Flushes output after each output operation.  
 Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**uppercase**

const [fmtflags](#) std::ios\_base::uppercase [static], [inherited]  
 Replaces certain lowercase letters with their uppercase equivalents in generated output.  
 Referenced by [std::num\\_put< \\_CharT, \\_Outiter >::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

### 5.230.1 Detailed Description

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
class std::basic_regex<_Ch_type, _Rx_traits>
```

A regular expression.

Specializations of this class template represent regular expressions constructed from sequences of character type `__Ch_type`. Use the `std::regex` typedef for `std::basic_regex<char>`.

A character sequence passed to the constructor will be parsed according to the chosen grammar, and used to create a state machine representing the regular expression. The `regex` object can then be passed to algorithms such as `std::regex_match` to match sequences of characters.

The `syntax_option_type` flag passed to the constructor selects from one of the supported regular expression grammars. The default is `ECMAScript` and the others are `basic`, `extended`, `awk`, `grep`, and `egrep`, which are variations on POSIX regular expressions.

Since

C++11

## 5.230.2 Constructor & Destructor Documentation

### `basic_regex()` [1/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex () [inline], [noexcept]
```

Constructs a basic regular expression that does not match any character sequence.

### `basic_regex()` [2/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const _Ch_type * __p,
    flag_type __f = ECMAScript) [inline], [explicit]
```

Constructs a basic regular expression from the sequence `[__p, __p + char_traits<_Ch_type>::length(__p))` interpreted according to the flags in `__f`.

#### Parameters

<code>__p</code>	A pointer to the start of a C-style null-terminated string containing a regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

#### Exceptions

<code>regex_error</code>	if <code>__p</code> is not a valid regular expression.
--------------------------	--

### `basic_regex()` [3/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const _Ch_type * __p,
    std::size_t __len,
    flag_type __f = ECMAScript) [inline]
```

Constructs a basic regular expression from the sequence `[p, p + len)` interpreted according to the flags in `f`.

#### Parameters

<code>__p</code>	A pointer to the start of a string containing a regular expression.
<code>__len</code>	The length of the string containing the regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

## Exceptions

<code>regex_error</code>	if <code>__p</code> is not a valid regular expression.
--------------------------	--

**basic\_regex()** [4/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex<_Ch_type, _Rx_traits>::basic_regex (
    const basic_regex<_Ch_type, _Rx_traits> & __rhs) [default]
```

Copy-constructs a basic regular expression.

## Parameters

<code>__rhs</code>	A regex object.
--------------------	-----------------

**basic\_regex()** [5/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex<_Ch_type, _Rx_traits>::basic_regex (
    basic_regex<_Ch_type, _Rx_traits> && __rhs) [default], [noexcept]
```

Move-constructs a basic regular expression.

## Parameters

<code>__rhs</code>	A regex object.
--------------------	-----------------

**basic\_regex()** [6/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits, typename _Ch_alloc>
std::basic_regex<_Ch_type, _Rx_traits>::basic_regex (
    const std::basic_string<_Ch_type, _Ch_traits, _Ch_alloc> & __s,
    flag_type __f = ECMAScript) [inline], [explicit]
```

Constructs a basic regular expression from the string `s` interpreted according to the flags in `f`.

## Parameters

<code>__s</code>	A string containing a regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

## Exceptions

<code>regex_error</code>	if <code>__s</code> is not a valid regular expression.
--------------------------	--

**basic\_regex()** [7/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _FwdIter>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    _FwdIter __first,
    _FwdIter __last,
    flag_type __f = ECMAScript) [inline]
```

Constructs a basic regular expression from the range [first, last) interpreted according to the flags in f.

**Parameters**

<code>__first</code>	The start of a range containing a valid regular expression.
<code>__last</code>	The end of a range containing a valid regular expression.
<code>__f</code>	The format flags of the regular expression.

**Exceptions**

<i>regex_error</i>	if [ <code>__first</code> , <code>__last</code> ) is not a valid regular expression.
--------------------	--

**basic\_regex()** [8/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    initializer_list< _Ch_type > __l,
    flag_type __f = ECMAScript) [inline]
```

Constructs a basic regular expression from an initializer list.

**Parameters**

<code>__l</code>	The initializer list.
<code>__f</code>	The format flags of the regular expression.

**Exceptions**

<i>regex_error</i>	if <code>__l</code> is not a valid regular expression.
--------------------	--

**~basic\_regex()**

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::~~basic_regex () [inline]
```

Destroys a basic regular expression.

## 5.230.3 Member Function Documentation

**assign()** [1/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _InputIterator>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    _InputIterator __first,
    _InputIterator __last,
    flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object.

## Parameters

<code>__first</code>	The start of a range containing a valid regular expression.
<code>__last</code>	The end of a range containing a valid regular expression.
<code>__flags</code>	Syntax option flags.

## Exceptions

<code>regex_error</code>	if <code>p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged.
--------------------------	--

**assign()** [2/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    basic_regex<_Ch_type, _Rx_traits> && __rhs) [inline], [noexcept]
```

Move-assigns one regular expression to another.

## Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

**assign()** [3/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    const _Ch_type * __p,
    flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

## Parameters

<code>__p</code>	A pointer to a C-style null-terminated string containing a regular expression pattern.
<code>__flags</code>	Syntax option flags.

## Exceptions

<i>regex_error</i>	if <code>__p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------	--

**assign()** [4/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::assign (
    const _Ch_type * __p,
    size_t __len,
    flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

## Parameters

<code>__p</code>	A pointer to a C-style string containing a regular expression pattern.
<code>__len</code>	The length of the regular expression pattern string.
<code>__flags</code>	Syntax option flags.

## Exceptions

<i>regex_error</i>	if <code>p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------	--

**assign()** [5/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::assign (
    const basic_regex<_Ch_type, _Rx_traits > & __rhs) [inline], [noexcept]
```

Assigns one regular expression to another.

## Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

Referenced by `std::basic_regex< char >::basic_regex()`, `std::basic_regex< char >::assign()`, `std::basic_regex< char >::operator=()`, `std::basic_regex< char >::operator=()`, and `std::basic_regex< char >::operator=()`.

**assign()** [6/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits, typename _Alloc>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::assign (
    const basic_string<_Ch_type, _Ch_traits, _Alloc > & __s,
    flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

## Parameters

<code>__s</code>	A string containing a regular expression pattern.
<code>__flags</code>	Syntax option flags.

## Exceptions

<code>regex_error</code>	if <code>__s</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------------	--

**assign()** [7/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    initializer_list<_Ch_type> __l,
    flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object.

## Parameters

<code>__l</code>	An initializer list representing a regular expression.
<code>__flags</code>	Syntax option flags.

## Exceptions

<code>regex_error</code>	if <code>__l</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged.
--------------------------	--

**flags()**

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
flag_type std::basic_regex<_Ch_type, _Rx_traits>::flags () const [inline], [noexcept]
```

Gets the flags used to construct the regular expression or in the last call to `assign()`.

**getloc()**

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex<_Ch_type, _Rx_traits>::getloc () const [inline], [noexcept]
```

Gets the locale currently imbued in the regular expression object.

**imbue()**

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex<_Ch_type, _Rx_traits>::imbue (
    locale_type __loc) [inline]
```

Imbues the regular expression object with the given locale.

## Parameters

<code>__loc</code>	A locale.
--------------------	-----------

**mark\_count()**

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
unsigned int std::basic_regex<_Ch_type, _Rx_traits >::mark_count () const [inline], [noexcept]
```

Gets the number of marked subexpressions within the regular expression.

**operator=()** [1/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    basic_regex<_Ch_type, _Rx_traits > && ) [default]
```

Move-assigns one regular expression to another.

**operator=()** [2/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    const _Ch_type * __p) [inline]
```

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

**Parameters**

<code>__p</code>	A pointer to the start of a null-terminated C-style string containing a regular expression.
------------------	---

**operator=()** [3/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    const basic_regex<_Ch_type, _Rx_traits > & ) [default]
```

Assigns one regular expression to another.

**operator=()** [4/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits, typename _Alloc>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    const basic_string<_Ch_type, _Ch_traits, _Alloc > & __s) [inline]
```

Replaces a regular expression with a new one constructed from a string.

**Parameters**

<code>__s</code>	A pointer to a string containing a regular expression.
------------------	--

**operator=()** [5/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    initializer_list<_Ch_type > __l) [inline]
```

Replaces a regular expression with a new one constructed from an initializer list.

## Parameters

<code>↔</code>	The initializer list.
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>/</code>	

## Exceptions

<code>regex_error</code>	if <code>__l</code> is not a valid regular expression.
--------------------------	--

**swap()**

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
void std::basic_regex<_Ch_type, _Rx_traits>::swap (
    basic_regex<_Ch_type, _Rx_traits> & __rhs) [inline], [noexcept]
```

Swaps the contents of two regular expression objects.

## Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

### 5.231.1 Detailed Description

`template<typename _CharT, typename _Traits>`  
`class std::basic_streambuf< _CharT, _Traits >`

The actual work of input and output (interface).

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.

Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:

- The controlled input sequence can be not readable.
- The controlled output sequence can be not writable.
- The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
- The controlled sequences can support operations *directly* to or from associated sequences.
- The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.

2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:
  - the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
  - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
  - the *end pointer*, or first element address beyond the end of the array (called *xend* here).
3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:
  - If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
  - If *xnext* is not a null pointer and *xnext* < *xend* for an output sequence, then a *write position* is available. In this case, *\*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
  - If *xnext* is not a null pointer and *xbeg* < *xnext* for an input sequence, then a *putback position* is available. In this case, *xnext*[-1] shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
  - If *xnext* is not a null pointer and *xnext* < *xend* for an input sequence, then a *read position* is available. In this case, *\*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

### 5.231.2 Member Typedef Documentation

#### `__streambuf_type`

```
template<typename _CharT, typename _Traits>
typedef basic_streambuf<char_type, traits_type> std::basic_streambuf<_CharT, _Traits>::__↵
streambuf_type
```

This is a non-standard type.

#### `char_type`

```
template<typename _CharT, typename _Traits>
typedef _CharT std::basic_streambuf<_CharT, _Traits>::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

#### `int_type`

```
template<typename _CharT, typename _Traits>
typedef traits_type::int_type std::basic_streambuf<_CharT, _Traits>::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

#### `off_type`

```
template<typename _CharT, typename _Traits>
typedef traits_type::off_type std::basic_streambuf<_CharT, _Traits>::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**pos\_type**

```
template<typename _CharT, typename _Traits>
typedef traits_type::pos_type std::basic_streambuf< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**traits\_type**

```
template<typename _CharT, typename _Traits>
typedef _Traits std::basic_streambuf< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**5.231.3 Constructor & Destructor Documentation****~basic\_streambuf()**

```
template<typename _CharT, typename _Traits>
virtual std::basic_streambuf< _CharT, _Traits >::~~basic_streambuf () [inline], [virtual]
```

Destructor deallocates no buffer space.

**basic\_streambuf()**

```
template<typename _CharT, typename _Traits>
std::basic_streambuf< _CharT, _Traits >::basic_streambuf () [inline], [protected]
```

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the `basic_streambuf` class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

**5.231.4 Member Function Documentation****eback()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::eback () const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**egptr()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::egptr () const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::xsgetn()`, and `xsgetn()`.

**epptr()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::epptr () const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::xsputn()`, and `xsputn()`.

**gbump()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::gbump (
    int __n) [inline], [protected]
```

Moving the read position.

**Parameters**

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**getloc()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::getloc () const [inline]
```

Locale access.

**Returns**

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

**gptr()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::gptr () const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::xsgetn()`, and `xsgetn()`.

**imbue()**

```
template<typename _CharT, typename _Traits>
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
    const locale & __loc) [inline], [protected], [virtual]
```

Changes translations.

**Parameters**

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

**Note**

Base class version does nothing.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< wchar_t >`, and `std::basic_filebuf< wchar_t >`.

**in\_avail()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail () [inline]
```

Looking ahead into the stream.

**Returns**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

**overflow()**

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::overflow (
    int_type __c = traits_type::eof()) [inline], [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

**Parameters**

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

**Returns**

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, traits_type>`, `std::basic_filebuf<char_type, traits_type>`, `std::basic_filebuf<wchar_t>`, `std::basic_filebuf<wchar_t, traits_type>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_stringbuf<char_type, traits_type>`, `std::basic_stringbuf<wchar_t>`, `std::basic_stringbuf<wchar_t, traits_type>`, and `std::wbuffer_convert<_Codecvt, _Elem, _Tr>`.

Referenced by `xspn()`.

**pbackfail()**

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::pbackfail (
    int_type __c = traits_type::eof()) [inline], [protected], [virtual]
```

Tries to back up the input sequence.

**Parameters**

<code>__c</code>	The character to be inserted back into the sequence.
------------------	--

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, traits_type>`, `std::basic_filebuf<char_type, traits_type>`, `std::basic_filebuf<wchar_t>`, `std::basic_filebuf<wchar_t, traits_type>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_stringbuf<char_type, traits_type>`, `std::basic_stringbuf<wchar_t>`, `std::basic_stringbuf<wchar_t, traits_type>`, and `std::basic_stringbuf<wchar_t, traits_type>`.

**pbase()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pbase () const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::sync\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsputn\(\)](#).

**pbump()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::pbump (
    int __n) [inline], [protected]
```

Moving the write position.

**Parameters**

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the write position without returning any data.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#).

**pptr()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pptr () const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::sync\(\)](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::xsputn\(\)](#).

**pubimbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
    const locale & __loc) [inline]
```

Entry point for imbue().

## Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

## Returns

The previous locale.

Calls the derived `imbue(__loc)`.

**pubseekoff()**

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Alters the stream position.

## Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekoff` function.

**pubseekpos()**

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Alters the stream position.

## Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

**pubsetbuf()**

```
template<typename _CharT, typename _Traits>
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
    char_type * __s,
    streamsize __n) [inline]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

**pubsync()**

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync () [inline]
```

Calls virtual sync function.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#).

**sbumpc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc () [inline]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#).

**seekoff()**

```
template<typename _CharT, typename _Traits>
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< wchar\\_t >](#), [std::basic\\_filebuf< wchar\\_t >](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_stringbuf< char >](#), [std::basic\\_stringbuf< char >](#), [std::basic\\_stringbuf< wchar\\_t >](#), and [std::basic\\_stringbuf< wchar\\_t >](#).

**seekpos()**

```
template<typename _CharT, typename _Traits>
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< wchar\\_t >](#), [std::basic\\_filebuf< wchar\\_t >](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_stringbuf< char >](#), [std::basic\\_stringbuf< char >](#), [std::basic\\_stringbuf< wchar\\_t >](#), and [std::basic\\_stringbuf< wchar\\_t >](#).

**setbuf()**

```
template<typename _CharT, typename _Traits>
virtual basic_streambuf< char_type, _Traits > * std::basic_streambuf< _CharT, _Traits >::setbuf
(
    char_type * ,
    streamsizet ) [inline], [protected], [virtual]
```

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

**Note**

Base class version does nothing, returns `this`.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, `std::basic_filebuf<char>`, `std::basic_filebuf<char_type, traits_type>`, `std::basic_filebuf<wchar_t>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_stringbuf<char>`, and `std::basic_stringbuf<char>`.

**setg()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
    char_type * __gbeg,
    char_type * __gnext,
    char_type * __gend) [inline], [protected]
```

Setting the three read area pointers.

**Parameters**

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

**Postcondition**

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**setp()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setp (
    char_type * __pbeg,
    char_type * __pend) [inline], [protected]
```

Setting the three write area pointers.

**Parameters**

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

**Postcondition**

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Referenced by `std::wbuffer_convert<_Codecv, _Elem, _Tr>::wbuffer_convert()`.

**sgetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sgetc () [inline]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::ignore()`.

**sgetn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (
    char_type * __s,
    streamsize __n) [inline]
```

Entry point for `xsgetn`.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

**showmanyc()**

```
template<typename _CharT, typename _Traits>
virtual streamsize std::basic_streambuf<_CharT, _Traits>::showmanyc () [inline], [protected], [virtual]
```

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1*

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return eof() but that they will return immediately.*

The standard adds that *the morphemes of showmanyc are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< wchar_t >`, `std::basic_filebuf< wchar_t >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `std::basic_stringbuf< char >`, `std::basic_stringbuf< char_type, traits_type >`, `std::basic_stringbuf< wchar_t >`, and `std::basic_stringbuf< wchar_t >`.

**snextc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc () [inline]
Getting the next character.
```

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char_type, traits_type >::ignore()`, `std::basic_istream< char_type, traits_type >::operator>>()`, and `std::basic_istream< char_type, traits_type >::putback()`.

**sputbackc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
    char_type __c) [inline]
Pushing characters back into the input stream.
```

**Parameters**

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

**sputc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
    char_type __c) [inline]
Entry point for all single-character output functions.
```

**Parameters**

$\leftrightarrow$ __c	A character to output.
--------------------------	------------------------

**Returns**

\_\_c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores \_\_c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↔ __c)`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::overflow()`.

**sputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
    const char_type * __s,
    streamsize __n) [inline]
```

Entry point for all single-character output functions.

**Parameters**

$\leftrightarrow$ __s	A buffer read area.
$\leftrightarrow$ __n	A count.

One of two public output functions.

Returns `xsgputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

**sungetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc () [inline]
```

Moving backwards in the input stream.

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Referenced by `std::basic_istream< char_type, traits_type >::sentry::sentry()`.

**sync()**

```
template<typename _CharT, typename _Traits>
virtual int std::basic_streambuf< _CharT, _Traits >::sync () [inline], [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< wchar\\_t >](#), [std::basic\\_filebuf< wchar\\_t >](#), and [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >](#).

**uflow()**

```
template<typename _CharT, typename _Traits>
```

```
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow () [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#).

Referenced by [xsgetn\(\)](#).

**underflow()**

```
template<typename _CharT, typename _Traits>
```

```
virtual int_type std::basic_streambuf< _CharT, _Traits >::underflow () [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< wchar\\_t >](#), [std::basic\\_filebuf< wchar\\_t >](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_stringbuf< char >](#), [std::basic\\_stringbuf< char >](#), [std::basic\\_stringbuf< wchar\\_t >](#), [std::basic\\_stringbuf< wchar\\_t >](#), and [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >](#).

**xsgetn()**

```
template<typename _CharT, typename _Traits>
```

```
streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (
    char_type * __s,
    streamsize __n) [protected], [virtual]
```

Multiple character extraction.

## Parameters

<a href="#"><code>__s</code></a>	A buffer area.
<a href="#"><code>__n</code></a>	Maximum number of characters to assign.

## Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<\\_CharT, std::char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<char>](#), [std::basic\\_filebuf<char>](#), [std::basic\\_filebuf<char\\_type, traits\\_type>](#), [std::basic\\_filebuf<char\\_type, traits\\_type>](#), and [std::basic\\_filebuf<wchar\\_t>](#).  
References [egptr\(\)](#), [gptr\(\)](#), [std::min\(\)](#), and [uflow\(\)](#).

**xsputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::xsputn (
    const char_type * __s,
    streamsize __n)    [protected], [virtual]
```

Multiple character insertion.

## Parameters

<a href="#"><code>__s</code></a>	A buffer area.
<a href="#"><code>__n</code></a>	Maximum number of characters to write.

## Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<\\_CharT, std::char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<char>](#), [std::basic\\_filebuf<char>](#), [std::basic\\_filebuf<char\\_type, traits\\_type>](#), [std::basic\\_filebuf<char\\_type, traits\\_type>](#), and [std::basic\\_filebuf<wchar\\_t>](#).  
References [epptr\(\)](#), [std::min\(\)](#), [overflow\(\)](#), and [pptr\(\)](#).

**5.231.5 Member Data Documentation****`_M_buf_locale`**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf<_CharT, _Traits>::_M_buf_locale    [protected]
```

Current locale setting.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::basic\\_filebuf\(\)](#).

**`_M_in_beg`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_beg [protected]
```

Start of get area.

**`_M_in_cur`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_cur [protected]
```

Current read area.

**`_M_in_end`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_end [protected]
```

End of get area.

**`_M_out_beg`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_beg [protected]
```

Start of put area.

**`_M_out_cur`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_cur [protected]
```

Current put area.

**`_M_out_end`**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_end [protected]
```

End of put area.

### 5.232.1 Detailed Description

template<typename \_CharT, typename \_Traits = std::char\_traits<\_CharT>, typename \_Allocator = std::allocator<\_CharT>>

class **\_\_gnu\_debug::basic\_string**< \_CharT, \_Traits, \_Allocator >

Class std::basic\_string with safety/checking/debug instrumentation.

## 5.232.2 Member Function Documentation

**`__resize_and_overwrite()`** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string<_CharT, _Traits, _Alloc>::__resize_and_overwrite (
    size_type __n,
    _Operation __op) [constexpr], [inherited]
```

Non-standard version of `resize_and_overwrite` for C++11 and above.

**`__resize_and_overwrite()`** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string<_CharT, _Traits, _Alloc>::__resize_and_overwrite (
    size_type __n,
    _Operation __op) [inherited]
```

Non-standard version of `resize_and_overwrite` for C++11 and above.

**`append()`** [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (
    const _CharT * __s,
    size_type __n) [inline], [constexpr], [inherited]
```

Append a C substring.

## Parameters

<code>__s</code>	The C string to append.
<code>__n</code>	The number of characters to append.

## Returns

Reference to this string.

**`append()`** [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (
    const basic_string<_CharT, _Traits, _Alloc> & __str) [inline], [constexpr], [inherited]
```

Append a string to this string.

## Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

Referenced by `std::basic_string<_CharT>::append()`, `std::basic_string<_CharT>::append()`, `std::basic_string<_CharT>::append()`, `std::basic_string<_CharT>::append()`, `std::__cxx11::collate<_CharT>::do_transform()`, `std::basic_string<_CharT>::operator+=()`, `std::basic_string<_CharT>::operator+=()`, `std::basic_string<_CharT>::operator+=()`, `std::operator>>()`, and `resize()`.

**append()** [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos,
    size_type __n = npos) [inline], [constexpr], [inherited]
```

Append a substring.

**Parameters**

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

**append()** [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::append (
    initializer_list<_CharT> __l) [inline], [constexpr], [inherited]
```

Append an `initializer_list` of characters.

**Parameters**

<code>↵</code>	The <code>initializer_list</code> of characters to append.
<code>↵</code>	
<code>↵</code>	
<code>↵</code>	
<code>/</code>	

**Returns**

Reference to this string.

**append()** [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
    size_type __n,
    _CharT __c) [inline], [constexpr], [inherited]
```

Append multiple characters.

**Parameters**

<code>__n</code>	The number of characters to append.
<code>__c</code>	The character to use.

**Returns**

Reference to this string.

Appends `__n` copies of `__c` to this string.

**assign()** [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [constexpr], [noexcept],
[inherited]
```

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

**assign()** [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const _CharT * __s,
    size_type __n) [inline], [constexpr], [inherited]
```

Set value to a C substring.

**Parameters**

<code>__s</code>	The C string to use.
<code>__n</code>	Number of characters to use.

**Returns**

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

**assign()** [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline], [constexpr], [inherited]
```

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

Referenced by `std::basic_string< _CharT >::assign()`, `std::basic_string< _CharT >::assign()`, `std::basic_string< _CharT >::assign()`, `__gnu_debug::basic_string< char >::compare()`, `std::basic_string< _CharT >::operator=()`, `std::basic_string< _CharT >::operator=()`, `std::basic_string< _CharT >::operator=()`, `std::basic_string< _CharT >::operator=()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >`.

**assign()** [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n = npos) [inline], [constexpr], [inherited]
```

Set value to a substring of a string.

**Parameters**

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

**assign()** [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    size_type __n,
    _CharT __c) [inline], [constexpr], [inherited]
```

Set value to multiple characters.

**Parameters**

<code>__n</code>	Length of the resulting string.
<code>__c</code>	The character to use.

**Returns**

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

**at()** [1/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Allocator >::at (
    size_type __n) [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

**Parameters**

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

**Returns**

Read/write reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <code>n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**at()** [2/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Allocator >::at (
    size_type __n) [inline]
```

Provides access to the data contained in the string.

**Parameters**

$\leftrightarrow$ _n	The index of the character to access.
-------------------------	---------------------------------------

**Returns**

Read/write reference to the character.

**Exceptions**

<i>std::out_of_range</i>	If <i>n</i> is an invalid index.
--------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

**at()** [3/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Allocator >::at (
    size_type __n) const [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

**Parameters**

$\leftrightarrow$ _n	The index of the character to access.
-------------------------	---------------------------------------

**Returns**

Read-only (const) reference to the character.

**Exceptions**

<i>std::out_of_range</i>	If <i>n</i> is an invalid index.
--------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**at()** [4/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Allocator >::at (
    size_type __n) const [inline]
```

Provides access to the data contained in the string.

**Parameters**

$\leftrightarrow$ _n	The index of the character to access.
-------------------------	---------------------------------------

**Returns**

Read-only (const) reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If $n$ is an invalid index.
--------------------------------	-----------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**at()** [5/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string<_CharT, _Traits, _Alloc>::at (
    size_type __n) [inline], [nodiscard], [constexpr], [inherited]
```

Provides access to the data contained in the string.

**Parameters**

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

**Returns**

Read/write reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If $n$ is an invalid index.
--------------------------------	-----------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**at()** [6/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string<_CharT, _Traits, _Alloc>::at (
    size_type __n) const [inline], [nodiscard], [constexpr], [inherited]
```

Provides access to the data contained in the string.

**Parameters**

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

**Returns**

Read-only (const) reference to the character.

## Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

### **back()** [1/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Allocator >::back () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

### **back()** [2/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Allocator >::back () [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write reference to the data at the last element of the string.

### **capacity()**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::capacity () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

### **compare()** [1/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
    const basic_string< _CharT, _Traits, _Allocator > & __str) const [inline], [nodiscard],
[constexpr]
```

Compare to a string.

## Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [2/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string<_CharT, _Traits, _Allocator>::compare (
    size_type __pos,
    size_type __n,
    const basic_string<_CharT, _Traits, _Allocator> & __str) const [inline], [nodiscard],
[constexpr]
```

Compare substring to a string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [3/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string<_CharT, _Traits, _Allocator>::compare (
    size_type __pos,
    size_type __n,
    const basic_string<_CharT, _Traits, _Allocator> & __str) const [inline]
```

Compare substring to a string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [4/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string<_CharT, _Traits, _Allocator>::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) const [inline], [nodiscard], [constexpr]
```

Compare substring to a C string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `pos`. Returns an integer < 0 if the substring is ordered before `__s`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),__s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [5/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string<_CharT, _Traits, _Allocator>::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) const [inline], [nodiscard], [constexpr]
```

Compare substring against a character array.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of s.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

**compare()** [6/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string<_CharT, _Traits, _Allocator>::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) const [inline]
```

Compare substring against a character array.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of s.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

**compare()** [7/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string<_CharT, _Traits, _Allocator>::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string<_CharT, _Traits, _Allocator> & __str,
    size_type __pos2,
    size_type __n2 = npos) const [inline], [nodiscard], [constexpr]
```

Compare substring to a substring.

**Parameters**

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of <code>str</code> .
<code>__n2</code>	Number of characters in substring of <code>str</code> .

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [8/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos2,
    size_type __n2 = npos) const [inline]
```

Compare substring to a substring.

**Parameters**

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [9/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n,
    const basic_string< _CharT, _Traits, _Alloc > & __str) const [inline], [nodiscard],
[constexpr], [inherited]
```

Compare substring to a string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
--------------------	--

## Parameters

<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [10/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) const [inline], [nodiscard], [constexpr], [inherited]
```

Compare substring to a C string.

## Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `pos`. Returns an integer  $< 0$  if the substring is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),__s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [11/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) const [inline], [nodiscard], [constexpr], [inherited]
```

Compare substring against a character array.

## Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.

<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of <code>s</code> .

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer  $< 0$  if this substring is ordered before the string from `__s`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

#### `compare()` [12/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n2 = npos) const [inline], [nodiscard], [constexpr], [inherited]
```

Compare substring to a substring.

#### Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of <code>str</code> .
<code>__n2</code>	Number of characters in substring of <code>str</code> .

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer  $< 0$  if this substring is ordered before the substring of `__str`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

#### `copy()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0) const [constexpr], [inherited]
```

Copy substring into C string.

## Parameters

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

## Returns

Number of characters actually copied

## Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `__s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

**data()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
_CharT * std::basic_string<_CharT, _Traits, _Alloc>::data () [inline], [nodiscard], [constexpr],
[noexcept], [inherited]
```

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

**empty()**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
bool std::basic_string<_CharT, _Traits, _Allocator>::empty () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

**erase()** [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc>::erase (
    __const_iterator __first,
    __const_iterator __last) [inline], [constexpr], [inherited]
```

Remove a range of characters.

## Parameters

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

## Returns

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
    __const_iterator __position) [inline], [constexpr], [inherited]
```

Remove one character.

**Parameters**

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

**Returns**

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >↵
::erase (
    iterator __first,
    iterator __last) [inherited]
```

Remove a range of characters.

**Parameters**

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

**Returns**

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
    iterator __position) [inline], [inherited]
```

Remove one character.

**Parameters**

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

**Returns**

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::erase (
    size_type __pos = 0,
    size_type __n = npos) [inline], [constexpr], [inherited]
```

Remove characters.

**Parameters**

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.
--------------------------------	---

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are `< __n` characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by `std::getline()`, `std::operator>>()`, `std::basic_string<_CharT>::pop_back()`, and `resize()`.

**find()** [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
    _CharT __c,
    size_type __pos = 0) const [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find()** [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
    _CharT __c,
    size_type __pos = 0) const [noexcept]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find() [3/11]**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find() [4/11]**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find (
    const basic_string<_CharT, _Traits, _Allocator> & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find (
    const basic_string<_CharT, _Traits, _Allocator> & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find() [8/11]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
    _CharT __c,
    size_type __pos = 0) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find() [9/11]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::data\(\)](#), [npos](#), and [std::size\(\)](#).

Referenced by [std::basic\\_string< \\_CharT >::find\(\)](#), [std::basic\\_string< \\_CharT >::find\(\)](#), [std::basic\\_string< \\_CharT >::find\(\)](#), and [std::basic\\_string< \\_CharT >::find\\_first\\_of\(\)](#).

**find()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find\_first\_not\_of()** [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_not_of (
    _CharT __c,
    size_type __pos = 0) const [nodiscard], [constexpr], [noexcept]
```

Find position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of() [2/11]**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
    _CharT __c,
    size_type __pos = 0) const [noexcept]
```

Find position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of() [3/11]**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of() [7/11]**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of() [8/11]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
    _CharT __c,
    size_type __pos = 0) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_first\_not\_of()** [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_first\_not\_of()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
--------------------	--

<code>__pos</code>	Index of character to search from (default 0).
--------------------	--

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [std::basic\\_string<\\_CharT>::find\\_first\\_not\\_of\(\)](#), [std::basic\\_string<\\_CharT>::find\\_first\\_not\\_of\(\)](#), and [std::basic\\_string<\\_CharT>::find\\_first\\_not\\_of\(\)](#).

#### **find\_first\_of()** [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_of (
    _CharT __c,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

#### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

#### **find\_first\_of()** [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_of (
    _CharT __c,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character.

#### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

**find\_first\_of()** [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C substring.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find position of a character of C substring.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C string.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string<_CharT, _Traits, _Alloc>::find_first_of (
    _CharT __c,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

**find\_first\_of()** [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic\_string<_CharT, _Traits, _Alloc>::size_type std::basic\_string<_CharT, _Traits, _Alloc>::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character of C substring.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_first\_of()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string<_CharT, _Traits, _Alloc>::find_first_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character of C string.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [std::basic\\_string< \\_CharT >::find\\_first\\_of\(\)](#), and [std::basic\\_string< \\_CharT >::find\\_first\\_of\(\)](#).

**find\_last\_not\_of()** [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
    _CharT __c,
    size_type __pos = npos) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
    _CharT __c,
    size_type __pos = npos) const [noexcept]
```

Find last position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find last position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
    _CharT __c,
    size_type __pos = npos) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_last\_not\_of()** [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_last\_not\_of()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [std::basic\\_string< \\_CharT >::find\\_last\\_not\\_of\(\)](#), [std::basic\\_string< \\_CharT >::find\\_last\\_not\\_of\(\)](#), and [std::basic\\_string< \\_CharT >::find\\_last\\_not\\_of\(\)](#).

**find\_last\_of()** [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of (
    _CharT __c,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

**find\_last\_of()** [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of (
    _CharT __c,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

**find\_last\_of()** [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C substring.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find last position of a character of C substring.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C string.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of (
    const basic_string<_CharT, _Traits, _Allocator> & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of (
    const basic_string<_CharT, _Traits, _Allocator> & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
    _CharT __c,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

**find\_last\_of()** [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character of C substring.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_last\_of()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character of C string.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by `std::basic_string<_CharT>::find_last_of()`, and `std::basic_string<_CharT>::find_last_of()`.

**front()** [1/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string<_CharT, _Traits, _Allocator>::front () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

**front()** [2/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string<_CharT, _Traits, _Allocator>::front () [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read/write reference to the data at the first element of the string.

**get\_allocator()**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
allocator_type std::basic_string<_CharT, _Traits, _Allocator>::get_allocator () const [inline],
[nodiscard], [constexpr], [noexcept]
```

Return copy of allocator used to construct this string.

**insert()** [1/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc>::insert (
    __const_iterator __p,
    _CharT __c) [inline], [constexpr], [inherited]
```

Insert one character.

**Parameters**

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [2/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
    const_iterator __p,
    _InputIterator __beg,
    _InputIterator __end) [inline], [constexpr], [inherited]
```

Insert a range of characters.

**Parameters**

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [3/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
    const_iterator __p,
    initializer_list< _CharT > __l) [inline], [constexpr], [inherited]
```

Insert an `initializer_list` of characters.

## Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__l</code>	The initializer_list of characters to insert.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

**insert()** [4/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc>::insert (
    const_iterator __p,
    size_type __n,
    _CharT __c) [inline], [constexpr], [inherited]
```

Insert multiple characters.

## Parameters

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

## Returns

Iterator referencing the first inserted char.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, and `std::basic_string<_CharT>::insert()`.

**insert()** [5/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    _CharT __c) [inline], [inherited]
```

Insert one character.

**Parameters**

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [6/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
    iterator __p,
    _InputIterator __beg,
    _InputIterator __end) [inline], [inherited]
```

Insert a range of characters.

**Parameters**

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[__beg, __end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [7/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
    iterator __p,
    initializer_list< _CharT > __l) [inline], [inherited]
```

Insert an `initializer_list` of characters.

## Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__l</code>	The initializer_list of characters to insert.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

**insert()** [8/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    size_type __n,
    _CharT __c) [inline], [inherited]
```

Insert multiple characters.

## Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [9/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos,
    const _CharT * __s) [inline], [constexpr], [inherited]
```

Insert a C string.

## Parameters

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.

Inserts the first *n* characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [10/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    const _CharT * __s,
    size_type __n) [inline], [constexpr], [inherited]
```

Insert a C substring.

**Parameters**

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [11/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    size_type __n,
    _CharT __c) [inline], [constexpr], [inherited]
```

Insert multiple characters.

## Parameters

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [12/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos1,
    const basic_string<_CharT, _Traits, _Alloc> & __str) [inline], [constexpr], [inherited]
```

Insert value of a string.

## Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [13/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos1,
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos2,
    size_type __n = npos) [inline], [constexpr], [inherited]
```

Insert a substring.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in <code>str</code> to insert.
<code>__n</code>	Number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> .

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**length()**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::length () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

**max\_size()**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::max_size () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the `size()` of the largest possible string.

**operator+=()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator+= (
    const basic_string<_CharT, _Traits, _Alloc> & __str) [inline], [constexpr], [inherited]
```

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

**operator[]()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic\_string<\_CharT, \_Traits, \_Alloc>::operator\[\] (
    size_type __pos) [inline], [nodiscard], [constexpr], [inherited]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

**operator[]()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic\_string<\_CharT, \_Traits, \_Alloc>::operator\[\] (
    size_type __pos) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Referenced by [std::basic\\_string<\\_CharT>::back\(\)](#), [std::basic\\_string<\\_CharT>::back\(\)](#), [std::basic\\_string<\\_CharT>::back\(\)](#), [std::basic\\_string<\\_CharT>::front\(\)](#), [std::basic\\_string<\\_CharT>::front\(\)](#), and [std::basic\\_string<\\_CharT>::front\(\)](#).

**replace()** [1/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic\_string & std::basic\_string<\_CharT, \_Traits, \_Alloc>::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    const _CharT * __s) [inline], [constexpr], [inherited]
```

Replace range of characters with C string.

**Parameters**

<code><a href="#">↵</a> __i1</code>	Iterator referencing start of range to replace.
<code><a href="#">↵</a> __i2</code>	Iterator referencing end of range to replace.
<code><a href="#">↵</a> __s</code>	C string value to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [2/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    const _CharT * __s,
    size_type __n) [inline], [constexpr], [inherited]
```

Replace range of characters with C substring.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [3/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    const basic_string<_CharT, _Traits, _Alloc > & __str) [inline], [constexpr], [inherited]
```

Replace range of characters with string.

## Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [4/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    size_type __n,
    _CharT __c) [inline], [constexpr], [inherited]
```

Replace range of characters with multiple characters.

## Parameters

<code>↵ __i1</code>	Iterator referencing start of range to replace.
<code>↵ __i2</code>	Iterator referencing end of range to replace.
<code>↵ __n</code>	Number of characters to insert.
<code>↵ __c</code>	Character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [5/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    const_iterator __i1,
    const_iterator __i2,
    _InputIterator __k1,
    _InputIterator __k2) [inline], [constexpr], [inherited]
```

Replace range of characters with range.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [6/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    const_iterator __i1,
    const_iterator __i2,
    initializer_list< _CharT > __l) [inline], [constexpr], [inherited]
```

Replace range of characters with `initializer_list`.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [7/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    _InputIterator __k1,
    _InputIterator __k2) [inline], [inherited]
```

Replace range of characters with range.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [8/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s) [inline], [inherited]
```

Replace range of characters with C string.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [9/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s,
    size_type __n) [inline], [inherited]
```

Replace range of characters with C substring.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [10/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const basic_string<_CharT, _Traits, _Alloc > & __str) [inline], [inherited]
```

Replace range of characters with string.

## Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [11/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    initializer_list<_CharT> __l) [inline], [inherited]
```

Replace range of characters with `initializer_list`.

## Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [12/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
```

```

        iterator __i2,
        size_type __n,
        _CharT __c) [inline], [inherited]

```

Replace range of characters with multiple characters.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__n</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

#### **replace()** [13/17]

```

template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n,
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline], [constexpr], [inherited]

```

Replace characters with value from another string.

#### Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by `std::basic_string<_CharT>::append()`, `std::basic_string<_CharT>::assign()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, and `std::basic_string<_CharT>::replace()`.

### **replace()** [14/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) [inline], [constexpr], [inherited]
```

Replace characters with value of a C string.

#### Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the characters of `__s` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

### **replace()** [15/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::replace
(
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) [inline], [constexpr], [inherited]
```

Replace characters with value of a C substring.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>s</code> to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace() [16/17]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n1,
    size_type __n2,
    _CharT __c) [inline], [constexpr], [inherited]
```

Replace characters with multiple characters.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [17/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos1,
    size_type __n1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n2 = npos) [inline], [constexpr], [inherited]
```

Replace characters with value from another string.

**Parameters**

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of str to use.
<code>__n2</code>	Number of characters from str to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**reserve()** [1/4]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
void std::basic_string< _CharT, _Traits, _Allocator >::reserve () [constexpr]
Equivalent to shrink_to_fit().
```

**reserve()** [2/4]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
void std::basic_string< _CharT, _Traits, _Allocator >::reserve (
    size_type __res_arg) [constexpr]
```

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

**Exceptions**

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

**reserve() [3/4]**

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
void std::basic_string<_CharT, _Traits, _Allocator>::reserve (
    size_type __res_arg)
```

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

**Exceptions**

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

**reserve() [4/4]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::reserve (
    size_type __res_arg) [constexpr], [inherited]
```

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

**Exceptions**

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::tr2::operator>>\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#).

### **resize()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::resize (
    size_type __n) [inline], [constexpr], [inherited]
```

Resizes the string to the specified number of characters.

#### Parameters

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

### **resize()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::resize (
    size_type __n,
    _CharT __c) [constexpr], [inherited]
```

Resizes the string to the specified number of characters.

#### Parameters

<code>__n</code>	Number of characters the string should contain.
<code>__c</code>	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

References [append\(\)](#), [erase\(\)](#), and [size\(\)](#).

Referenced by [std::basic\\_string<\\_CharT>::resize\(\)](#).

### **rfind()** [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind (
    _CharT __c,
    size_type __pos = npos) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

#### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**rfind()** [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator >::rfind (
    _CharT __c,
    size_type __pos = npos) const [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**rfind()** [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator >::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find last position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr]
```

Find last position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::rfind (
    const basic_string<_CharT, _Traits, _Allocator> & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::rfind (
    const basic_string< _CharT, _Traits, _Allocator > & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
```

```
    _CharT __c,
    size_type __pos = npos) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References `npos`, and `std::size()`.

**rfind()** [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::min\(\)](#), [npos](#), and [std::size\(\)](#).

**rfind()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [inherited]
```

Find last position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a string.

**Parameters**

<code>__str</code>	String to locate.
--------------------	-------------------

<code>__pos</code>	Index of character to search back from (default end).
--------------------	---

### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Referenced by [std::basic\\_string<\\_CharT>::find\\_last\\_of\(\)](#), [std::basic\\_string<\\_CharT>::rfind\(\)](#), [std::basic\\_string<\\_CharT>::rfind\(\)](#), [std::basic\\_string<\\_CharT>::rfind\(\)](#), and [std::basic\\_string<\\_CharT>::rfind\(\)](#).

### size()

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string<_CharT, _Traits, _Allocator>::size () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

### substr()

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string std::basic_string<_CharT, _Traits, _Alloc>::substr (
    size_type __pos = 0,
    size_type __n = npos) const [inline], [nodiscard], [constexpr], [inherited]
```

Get a substring.

### Parameters

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

### Returns

The new string.

### Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

### swap()

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::swap (
    basic_string<_CharT, _Traits, _Alloc> & __s) [constexpr], [noexcept], [inherited]
```

Swap contents with another string.

## Parameters

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

References [basic\\_string\(\)](#), and [get\\_allocator\(\)](#).

Referenced by [std::basic\\_string<\\_CharT >::assign\(\)](#), and [std::basic\\_string<\\_CharT >::operator=\(\)](#).

## 5.232.3 Member Data Documentation

## npos

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
const size_type std::basic_string<_CharT, _Traits, _Allocator >::npos [static]
```

Value returned by various member functions when they fail.

The documentation for this class was generated from the following file:

## 5.233.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_string< _CharT, _Traits, _Alloc >
```

Managing sequences of characters and character-like objects.

Since

C++98

## Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#). Of the [optional sequence requirements](#), only `push_back`, `at`, and array access are supported.

Since

C++98

## Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#). Of the [optional sequence requirements](#), only `push_back`, `at`, and array access are supported.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_5\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_5_style.html)

Documentation? What's that? Nathan Myers [ncm@cantrip.org](mailto:ncm@cantrip.org).

A string looks like this:

```

                                     [_Rep]
                                     _M_length
[basic_string<char_type>]           _M_capacity
_M_dataptr                         _M_refcount
_M_p ----->                     unnamed array of char_type
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single `add` instruction: `_Rep::_M_data()`, and `string<_Rep>::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a Copy-On-Write C++ string implementation.

### 5.233.2 Constructor & Destructor Documentation

#### basic\_string() [1/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string () [inline], [constexpr], [noexcept]
```

Default constructor creates an empty string.

Referenced by `std::basic_string< _CharT >::assign()`, `std::basic_string< _CharT >::assign()`, `std::basic_string< _CharT >::substr()`, and `swap()`.

#### basic\_string() [2/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _Alloc & __a) [inline], [explicit], [constexpr], [noexcept]
```

Construct an empty string using allocator *a*.

#### basic\_string() [3/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline], [constexpr]
```

Construct string with copy of value of *\_\_str*.

##### Parameters

<i>__str</i>	Source string.
--------------	----------------

#### basic\_string() [4/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    const _Alloc & __a = _Alloc()) [inline], [constexpr]
```

Construct string as copy of a substring.

##### Parameters

<i>__str</i>	Source string.
<i>__pos</i>	Index of first character to copy from.
<i>__a</i>	Allocator to use.

#### basic\_string() [5/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n) [inline], [constexpr]
```

Construct string as copy of a substring.

## Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.

**basic\_string()** [6/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos,
    size_type __n,
    const _Alloc & __a) [inline], [constexpr]
```

Construct string as copy of a substring.

## Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use.

**basic\_string()** [7/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (
    const _CharT * __s,
    size_type __n,
    const _Alloc & __a = _Alloc()) [inline], [constexpr]
```

Construct string initialized by a character array.

## Parameters

<code>__s</code>	Source character array.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use (default is default allocator).

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

**basic\_string()** [8/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename = _RequireAllocator<_Alloc>>
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (
    const _CharT * __s,
    const _Alloc & __a = _Alloc()) [inline], [constexpr]
```

Construct string as copy of a C string.

## Parameters

<a href="#"></a> <code>_s</code>	Source C string.
<a href="#"></a> <code>_a</code>	Allocator to use (default is default allocator).

**basic\_string()** [9/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename = _RequireAllocator<_Alloc>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    size_type __n,
    _CharT __c,
    const _Alloc & __a = _Alloc()) [inline], [constexpr]
```

Construct string as multiple characters.

## Parameters

<a href="#"></a> <code>_n</code>	Number of characters.
<a href="#"></a> <code>_c</code>	Character to use.
<a href="#"></a> <code>_a</code>	Allocator to use (default is default allocator).

**basic\_string()** [10/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [constexpr], [noexcept]
```

Move construct string.

## Parameters

<code>__str</code>	Source string.
--------------------	----------------

The newly-created string contains the exact contents of `__str`. `__str` is a valid, but unspecified string.

**basic\_string()** [11/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    initializer_list< _CharT > __l,
    const _Alloc & __a = _Alloc()) [inline], [constexpr]
```

Construct string from an initializer list.

## Parameters

<a href="#"></a> <code>_l</code>	std::initializer_list of characters.
--	--------------------------------------

<code>__a</code>	Allocator to use (default is default allocator).
------------------	--

**basic\_string()** [12/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    _InputIterator __beg,
    _InputIterator __end,
    const _Alloc & __a = _Alloc()) [inline], [constexpr]
```

Construct string as copy of a range.

**Parameters**

<code>__beg</code>	Start of range.
<code>__end</code>	End of range.
<code>__a</code>	Allocator to use (default is default allocator).

**~basic\_string()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::~~basic_string () [inline], [constexpr]
```

Destroy the string instance.

**basic\_string()** [13/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string () [inline], [noexcept]
```

Default constructor creates an empty string.

**basic\_string()** [14/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _Alloc & __a) [inline], [explicit]
```

Construct an empty string using allocator *a*.

**basic\_string()** [15/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]
```

Construct string with copy of value of *str*.

**Parameters**

<code>__str</code>	Source string.
--------------------	----------------

**basic\_string()** [16/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    const _Alloc & __a = _Alloc())
```

Construct string as copy of a substring.

**Parameters**

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__a</code>	Allocator to use.

**basic\_string()** [17/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n)
```

Construct string as copy of a substring.

**Parameters**

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.

**basic\_string()** [18/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n,
    const _Alloc & __a)
```

Construct string as copy of a substring.

**Parameters**

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use.

**basic\_string()** [19/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _CharT * __s,
    size_type __n,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string initialized by a character array.

**Parameters**

 <b>__s</b>	Source character array.
 <b>__n</b>	Number of characters to copy.
 <b>__a</b>	Allocator to use (default is default allocator).

NB: \_\_s must have at least \_\_n characters, '\0' has no special meaning.

**basic\_string()** [20/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename = _RequireAllocator<_Alloc>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _CharT * __s,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string as copy of a C string.

**Parameters**

 <b>__s</b>	Source C string.
 <b>__a</b>	Allocator to use (default is default allocator).

**basic\_string()** [21/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    size_type __n,
    _CharT __c,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string as multiple characters.

**Parameters**

 <b>__n</b>	Number of characters.
 <b>__c</b>	Character to use.
 <b>__a</b>	Allocator to use (default is default allocator).

**basic\_string()** [22/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [noexcept]
```

Move construct string.

**Parameters**

<code>__str</code>	Source string.
--------------------	----------------

The newly-created string contains the exact contents of `__str`. `__str` is a valid, but unspecified string.

**basic\_string()** [23/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    initializer_list< _CharT > __l,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string from an initializer list.

**Parameters**

<code>__l</code>	std::initializer_list of characters.
<code>__a</code>	Allocator to use (default is default allocator).

**basic\_string()** [24/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    _InputIterator __beg,
    _InputIterator __end,
    const _Alloc & __a = _Alloc()) [inline]
```

Construct string as copy of a range.

**Parameters**

<code>__beg</code>	Start of range.
<code>__end</code>	End of range.
<code>__a</code>	Allocator to use (default is default allocator).

**~basic\_string()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::~~basic_string () [inline], [noexcept]
```

Destroy the string instance.

### 5.233.3 Member Function Documentation

#### **\_\_resize\_and\_overwrite()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string<_CharT, _Traits, _Alloc>::__resize_and_overwrite (
    size_type __n,
    _Operation __op) [constexpr]
```

Non-standard version of `resize_and_overwrite` for C++11 and above.

#### **\_\_resize\_and\_overwrite()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string<_CharT, _Traits, _Alloc>::__resize_and_overwrite (
    size_type __n,
    _Operation __op)
```

Non-standard version of `resize_and_overwrite` for C++11 and above.

#### **append()** [1/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::append (
    _InputIterator __first,
    _InputIterator __last) [inline], [constexpr]
```

Append a range of characters.

##### Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

##### Returns

Reference to this string.

Appends characters in the range `[__first, __last)` to this string.

#### **append()** [2/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::append (
    _InputIterator __first,
    _InputIterator __last) [inline]
```

Append a range of characters.

##### Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

**Returns**

Reference to this string.

Appends characters in the range [`__first`,`__last`) to this string.

**append()** [3/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const _CharT * __s)    [inline], [constexpr]
```

Append a C string.

**Parameters**

<code>__s</code>	The C string to append.
------------------	-------------------------

**Returns**

Reference to this string.

**append()** [4/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const _CharT * __s)    [inline]
```

Append a C string.

**Parameters**

<code>__s</code>	The C string to append.
------------------	-------------------------

**Returns**

Reference to this string.

**append()** [5/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const _CharT * __s,
    size_type __n)    [inline], [constexpr]
```

Append a C substring.

**Parameters**

<code>__s</code>	The C string to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**append()** [6/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const _CharT * __s,
    size_type __n)
```

Append a C substring.

**Parameters**

<code>__s</code>	The C string to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**append()** [7/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline], [constexpr]
```

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

Referenced by [std::basic\\_string<\\_CharT >::append\(\)](#), [std::basic\\_string<\\_CharT >::append\(\)](#), [std::basic\\_string<\\_CharT >::append\(\)](#), [std::basic\\_string<\\_CharT >::append\(\)](#), [std::\\_\\_cxx11::collate<\\_CharT >::do\\_transform\(\)](#), [std::basic\\_string<\\_CharT >::operator+=\(\(\)\)](#), [std::basic\\_string<\\_CharT >::operator+=\(\(\)\)](#), [std::basic\\_string<\\_CharT >::operator+=\(\(\)\)](#), [std::operator>>\(\)](#), and [resize\(\)](#).

**append()** [8/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const basic_string< _CharT, _Traits, _Alloc > & __str)
```

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

**append()** [9/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n = npos) [inline], [constexpr]
```

Append a substring.

**Parameters**

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

**append()** [10/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n = npos)
```

Append a substring.

**Parameters**

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

**append()** [11/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::append (
    initializer_list<_CharT > __l) [inline], [constexpr]
```

Append an initializer\_list of characters.

**Parameters**

↔	The initializer_list of characters to append.
↔	
↔	
↔	
/	

**Returns**

Reference to this string.

**append()** [12/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::append (
    initializer_list<_CharT > __l) [inline]
```

Append an initializer\_list of characters.

**Parameters**

↔	The initializer_list of characters to append.
↔	
↔	
↔	
/	

**Returns**

Reference to this string.

**append()** [13/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::append (
    size_type __n,
    _CharT __c) [inline], [constexpr]
```

Append multiple characters.

**Parameters**

↔ _n	The number of characters to append.
↔ _c	The character to use.

**Returns**

Reference to this string.

Appends `__n` copies of `__c` to this string.

**append()** [14/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    size_type __n,
    _CharT __c)
```

Append multiple characters.

**Parameters**

<code>__n</code>	The number of characters to append.
<code>__c</code>	The character to use.

**Returns**

Reference to this string.

Appends `__n` copies of `__c` to this string.

**assign()** [1/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    _InputIterator __first,
    _InputIterator __last) [inline], [constexpr]
```

Set value to a range of characters.

**Parameters**

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

**Returns**

Reference to this string.

Sets value of string to characters in the range `[__first,__last)`.

**assign()** [2/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    _InputIterator __first,
    _InputIterator __last) [inline]
```

Set value to a range of characters.

## Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

## Returns

Reference to this string.

Sets value of string to characters in the range [`__first`,`__last`).

**assign()** [3/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign (
    basic_string<_CharT, _Traits, _Alloc> && __str) [inline], [constexpr], [noexcept]
```

Set value to contents of another string.

## Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

## Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

**assign()** [4/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign (
    basic_string<_CharT, _Traits, _Alloc> && __str) [inline], [noexcept]
```

Set value to contents of another string.

## Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

## Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

**assign()** [5/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign (
    const _CharT * __s) [inline], [constexpr]
```

Set value to contents of a C string.

**Parameters**

<a href="#"></a> <a href="#"><u>s</u></a>	The C string to use.
---	----------------------

**Returns**

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

**assign()** [6/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const _CharT * __s) [inline]
```

Set value to contents of a C string.

**Parameters**

<a href="#"></a> <a href="#"><u>s</u></a>	The C string to use.
---	----------------------

**Returns**

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

**assign()** [7/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const _CharT * __s,
    size_type __n) [inline], [constexpr]
```

Set value to a C substring.

**Parameters**

<a href="#"></a> <a href="#"><u>s</u></a>	The C string to use.
<a href="#"></a> <a href="#"><u>n</u></a>	Number of characters to use.

**Returns**

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

**assign()** [8/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::assign (
    const _CharT * __s,
    size_type __n)
```

Set value to a C substring.

**Parameters**

<code>__s</code>	The C string to use.
<code>__n</code>	Number of characters to use.

**Returns**

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

**assign()** [9/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::assign (
    const basic_string<_CharT, _Traits, _Alloc > & __str) [inline], [constexpr]
```

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

Referenced by `std::basic_string<_CharT >::assign()`, `std::basic_string<_CharT >::assign()`, `std::basic_string<_CharT >::assign()`, `__gnu_debug::basic_string<char >::compare()`, `std::basic_string<_CharT >::operator=()`, `std::basic_string<_CharT >::operator=()`, `std::basic_string<_CharT >::operator=()`, `std::basic_string<_CharT >::operator=()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc >`

**assign()** [10/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::assign (
    const basic_string<_CharT, _Traits, _Alloc > & __str)
```

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

**assign()** [11/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n = npos) [inline], [constexpr]
```

Set value to a substring of a string.

**Parameters**

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

**assign()** [12/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n = npos) [inline]
```

Set value to a substring of a string.

**Parameters**

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

**assign()** [13/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::assign (
    initializer_list<_CharT > __l) [inline], [constexpr]
```

Set value to an initializer\_list of characters.

**Parameters**

↔	The initializer_list of characters to assign.
↔	
↔	
↔	
/	

**Returns**

Reference to this string.

**assign()** [14/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::assign (
    initializer_list<_CharT > __l) [inline]
```

Set value to an initializer\_list of characters.

**Parameters**

↔	The initializer_list of characters to assign.
↔	
↔	
↔	
/	

**Returns**

Reference to this string.

**assign()** [15/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::assign (
    size_type __n,
    _CharT __c) [inline], [constexpr]
```

Set value to multiple characters.

**Parameters**

↔ _n	Length of the resulting string.
↔ _c	The character to use.

**Returns**

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

**assign()** [16/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    size_type __n,
    _CharT __c) [inline]
```

Set value to multiple characters.

**Parameters**

<code>__n</code>	Length of the resulting string.
<code>__c</code>	The character to use.

**Returns**

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

**at()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
    size_type __n) [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

**Parameters**

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

**Returns**

Read/write reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <code>n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**at()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
    size_type __n) [inline]
```

Provides access to the data contained in the string.

**Parameters**

<code>_↔</code> <code>_n</code>	The index of the character to access.
------------------------------------	---------------------------------------

**Returns**

Read/write reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

**at()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string<_CharT, _Traits, _Alloc>::at (
    size_type __n) const [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

**Parameters**

<code>_↔</code> <code>_n</code>	The index of the character to access.
------------------------------------	---------------------------------------

**Returns**

Read-only (const) reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**at()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string<_CharT, _Traits, _Alloc>::at (
    size_type __n) const [inline]
```

Provides access to the data contained in the string.

**Parameters**

<code>_↔</code> <code>_n</code>	The index of the character to access.
------------------------------------	---------------------------------------

**Returns**

Read-only (const) reference to the character.

## Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

### **back()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::back () [inline]
```

Returns a read/write reference to the data at the last element of the string.

### **back()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

### **back()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back () const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

### **back()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::back () [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write reference to the data at the last element of the string.

### **begin()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () [inline]
```

Returns a read/write iterator that points to the first character in the string. Unshares the string.

### **begin()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

### **begin()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

**begin()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic\_string<\_CharT, \_Traits, \_Alloc>::begin\(\) [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write iterator that points to the first character in the string.

Referenced by [std::basic\\_string<\\_CharT>::crend\(\)](#), [std::basic\\_string<\\_CharT>::erase\(\)](#), [std::basic\\_string<\\_CharT>::erase\(\)](#), [std::basic\\_string<\\_CharT>::insert\(\)](#), [std::basic\\_string<\\_CharT>::insert\(\)](#), [std::basic\\_string<\\_CharT>::insert\(\)](#), [std::regex\\_match\(\)](#), [std::regex\\_match\(\)](#), [std::regex\\_replace\(\)](#), [std::regex\\_replace\(\)](#), [std::regex\\_search\(\)](#), [std::basic\\_string<\\_CharT>::rend\(\)](#), [std::basic\\_string<\\_CharT>::rend\(\)](#), [std::basic\\_string<\\_CharT>::replace\(\)](#), [std::basic\\_string<\\_CharT>::replace\(\)](#), and [std::basic\\_string<\\_CharT>::replace\(\)](#).

**c\_str()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic\_string<\_CharT, \_Traits, \_Alloc>::c\_str\(\) const [inline], [nodiscard],
[constexpr], [noexcept]
```

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Referenced by [std::\\_\\_cxx11::collate<\\_CharT>::do\\_compare\(\)](#), [std::money\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::\\_\\_cxx11::collate<\\_CharT>::do\\_transform\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), and [std::regex\\_traits<\\_CharT>::transform\\_primary\(\)](#).

**c\_str()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic\_string<\_CharT, \_Traits, \_Alloc>::c\_str\(\) const [inline], [noexcept]
```

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

**capacity()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::capacity\(\) const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

Referenced by [std::basic\\_string<\\_CharT>::assign\(\)](#), [std::basic\\_string<\\_CharT>::push\\_back\(\)](#), [reserve\(\)](#), and [reserve\(\)](#).

**capacity()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::capacity\(\) const [inline], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

**cbegin()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic\_string<\_CharT, \_Traits, \_Alloc>::cbegin\(\) const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

**cbegin()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic\_string< _CharT, _Traits, _Alloc >::cbegin () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

**cend()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic\_string< _CharT, _Traits, _Alloc >::cend () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

**cend()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic\_string< _CharT, _Traits, _Alloc >::cend () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

**clear()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic\_string< _CharT, _Traits, _Alloc >::clear () [inline], [constexpr], [noexcept]
```

Erases the string, making it empty.  
Referenced by [std::\\_\\_cxx11::collate< \\_CharT >::do\\_transform\(\)](#).

**clear()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic\_string< _CharT, _Traits, _Alloc >::clear () [inline], [noexcept]
```

Erases the string, making it empty.

**compare()** [1/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic\_string< _CharT, _Traits, _Alloc >::compare (
    const _CharT * __s) const [inline], [nodiscard], [constexpr], [noexcept]
```

Compare to a C string.

**Parameters**

<a href="#">_↵</a> <a href="#">_s</a>	C string to compare against.
--	------------------------------

**Returns**

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before [\\_\\_s](#), 0 if their values are equivalent, or > 0 if this string is ordered after [\\_\\_s](#). Determines the effective length [rlen](#) of the strings to compare as the smallest of [size\(\)](#) and the length of a string constructed from [\\_\\_s](#). The function then compares the two strings by calling [traits::compare\(data\(\),s,rlen\)](#). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [2/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    const _CharT * __s) const [inline], [noexcept]
```

Compare to a C string.

**Parameters**

<code>__s</code>	C string to compare against.
------------------	------------------------------

**Returns**

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__s`, 0 if their values are equivalent, or > 0 if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [3/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    const basic_string< _CharT, _Traits, _Alloc > & __str) const [inline], [nodiscard],
[constexpr]
```

Compare to a string.

**Parameters**

<code>__str</code>	String to compare against.
--------------------	----------------------------

**Returns**

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [4/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    const basic_string< _CharT, _Traits, _Alloc > & __str) const [inline]
```

Compare to a string.

**Parameters**

<code>__str</code>	String to compare against.
--------------------	----------------------------

**Returns**

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [5/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n,
    const basic_string< _CharT, _Traits, _Alloc > & __str) const [inline], [nodiscard],
[constexpr]
```

Compare substring to a string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [6/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n,
    const basic_string< _CharT, _Traits, _Alloc > & __str) const [inline]
```

Compare substring to a string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [7/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) const [inline], [nodiscard], [constexpr]
```

Compare substring to a C string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `pos`. Returns an integer < 0 if the substring is ordered before `__s`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),__s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [8/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) const [inline]
```

Compare substring to a C string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `pos`. Returns an integer < 0 if the substring is ordered before `__s`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),__s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [9/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) const [inline], [nodiscard], [constexpr]
```

Compare substring against a character array.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of <code>s</code> .

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

**compare()** [10/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) const [inline]
```

Compare substring against a character array.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of <code>s</code> .

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

**compare()** [11/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos2,
    size_type __n2 = npos) const [inline], [nodiscard], [constexpr]
```

Compare substring to a substring.

**Parameters**

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of <code>str</code> .
<code>__n2</code>	Number of characters in substring of <code>str</code> .

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**compare()** [12/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos2,
    size_type __n2 = npos) const [inline]
```

Compare substring to a substring.

**Parameters**

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer  $< 0$  if this substring is ordered before the substring of `__str`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**copy() [1/2]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0) const [constexpr]
```

Copy substring into C string.

**Parameters**

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

**Returns**

Number of characters actually copied

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `__s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

**copy() [2/2]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0) const
```

Copy substring into C string.

## Parameters

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

## Returns

Number of characters actually copied

## Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `__s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

**crbegin()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crbegin () const [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

**crbegin()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crbegin () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

**crend()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crend () const [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

**crend()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crend () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

**data()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic_string<_CharT, _Traits, _Alloc>::data () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Return const pointer to contents.

This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).

Referenced by `std::basic_regex< char >::assign()`, `std::basic_string< _CharT >::compare()`, `std::basic_string< _CharT >::compare()`, `std::basic_string< _CharT >::compare()`, `std::__cxx11::collate< _CharT >::do_compare()`, `std::__cxx11::collate< _CharT >::do_transform()`, `std::basic_string< _CharT >::find()`, `std::basic_string< _CharT >::find_first_not_of()`, `std::basic_string< _CharT >::find_first_of()`, `std::basic_string< _CharT >::find_last_of()`, `std::match_results< _BidirectionalIterator, polymorphic_allocator< sub_match< _BidirectionalIterator > > >::from_bytes()`, `std::operator==()`, `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes()`, and `std::regex_traits< _CharT >::transform()`.

#### **data()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic_string< _CharT, _Traits, _Alloc >::data () const [inline], [noexcept]
```

Return const pointer to contents.

This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).

#### **data()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
_CharT * std::basic_string< _CharT, _Traits, _Alloc >::data () [inline], [nodiscard], [constexpr],
[noexcept]
```

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

#### **data()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
_CharT * std::basic_string< _CharT, _Traits, _Alloc >::data () [inline]
```

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

The standard requires this function to be `noexcept` but for the Copy-On-Write string implementation it can throw. This function allows modifying the string contents directly, which means we must copy-on-write to unshare it, which requires allocating memory.

#### **empty()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
bool std::basic_string< _CharT, _Traits, _Alloc >::empty () const [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

Referenced by `std::basic_string< _CharT >::back()`, `std::basic_string< _CharT >::back()`, `std::basic_string< _CharT >::back()`, `std::basic_string< _CharT >::front()`, `std::basic_string< _CharT >::front()`, `std::basic_string< _CharT >::front()`, `std::tr2::operator>>()`, `std::basic_string< _CharT >::pop_back()`, and `std::basic_string< _CharT >::pop_back()`.

#### **empty()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
bool std::basic_string< _CharT, _Traits, _Alloc >::empty () const [inline], [nodiscard], [noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

**end()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::end () [inline]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

**end()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

**end()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

**end()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::end () [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write iterator that points one past the last character in the string.

Referenced by [std::basic\\_string< \\_CharT >::append\(\)](#), [std::basic\\_string< \\_CharT >::crbegin\(\)](#), [std::basic\\_string< \\_CharT >::erase\(\)](#), [std::basic\\_string< \\_CharT >::erase\(\)](#), [std::basic\\_string< \\_CharT >::insert\(\)](#), [std::basic\\_string< \\_CharT >::insert\(\)](#), [std::basic\\_string< \\_CharT >::insert\(\)](#), [std::basic\\_string< \\_CharT >::rbegin\(\)](#), [std::basic\\_string< \\_CharT >::rbegin\(\)](#), [std::basic\\_string< \\_CharT >::rbegin\(\)](#), [std::regex\\_match\(\)](#), [std::regex\\_match\(\)](#), [std::regex\\_replace\(\)](#), [std::regex\\_replace\(\)](#), [std::regex\\_search\(\)](#), [std::basic\\_string< \\_CharT >::replace\(\)](#), [std::basic\\_string< \\_CharT >::replace\(\)](#), and [std::basic\\_string< \\_CharT >::replace\(\)](#).

**erase()** [1/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
    __const_iterator __first,
    __const_iterator __last) [inline], [constexpr]
```

Remove a range of characters.

**Parameters**

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

**Returns**

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

**erase()** [2/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
    __const_iterator __position) [inline], [constexpr]
```

Remove one character.

## Parameters

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

## Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [3/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc >::iterator std::basic_string<_CharT, _Traits, _Alloc >↵
::erase (
    iterator __first,
    iterator __last)
```

Remove a range of characters.

## Parameters

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

## Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

**erase()** [4/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc >::erase (
    iterator __position) [inline]
```

Remove one character.

## Parameters

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

## Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**erase()** [5/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::erase (
    size_type __pos = 0,
    size_type __n = npos) [inline], [constexpr]
```

Remove characters.

**Parameters**

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.
--------------------------------	---

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are  $< __n$  characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by [std::getline\(\)](#), [std::operator>>\(\)](#), [std::basic\\_string<\\_CharT>::pop\\_back\(\)](#), and [resize\(\)](#).

**erase() [6/6]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::erase (
    size_type __pos = 0,
    size_type __n = npos) [inline]
```

Remove characters.

**Parameters**

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.
--------------------------------	---

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are  $< __n$  characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**find() [1/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    _CharT __c,
    size_type __pos = 0) const [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

## Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find()** [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    _CharT __c,
    size_type __pos = 0) const [noexcept]
```

Find position of a character.

## Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find()** [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find position of a C substring.

## Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::data\(\)](#), [npos](#), and [std::size\(\)](#).

Referenced by [std::basic\\_string<\\_CharT>::find\(\)](#), [std::basic\\_string<\\_CharT>::find\(\)](#), [std::basic\\_string<\\_CharT>::find\(\)](#), and [std::basic\\_string<\\_CharT>::find\\_first\\_of\(\)](#).

**find()** [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**find\_first\_not\_of()** [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
    _CharT __c,
    size_type __pos = 0) const [nodiscard], [constexpr], [noexcept]
```

Find position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_first\_not\_of()** [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
    _CharT __c,
    size_type __pos = 0) const [noexcept]
```

Find position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C substring.

## Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_first\_not\_of()** [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find position of a character not in C substring.

## Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C string.

## Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_not\_of()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [std::basic\\_string<\\_CharT>::find\\_first\\_not\\_of\(\)](#), [std::basic\\_string<\\_CharT>::find\\_first\\_not\\_of\(\)](#), and [std::basic\\_string<\\_CharT>::find\\_first\\_not\\_of\(\)](#).

**find\_first\_not\_of()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (
    _CharT __c,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

**find\_first\_of()** [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (
    _CharT __c,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

**find\_first\_of()** [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C substring.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_first\_of()** [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find position of a character of C substring.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C string.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::find\_first\_of (
    const _CharT * __s,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character of C string.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_first\_of()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::find\_first\_of (
    const basic\_string<\_CharT, \_Traits, \_Alloc> & __str,
    size_type __pos = 0) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [std::basic\\_string<\\_CharT>::find\\_first\\_of\(\)](#), and [std::basic\\_string<\\_CharT>::find\\_first\\_of\(\)](#).

**find\_first\_of()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::find\_first\_of (
    const basic\_string<\_CharT, \_Traits, \_Alloc> & __str,
    size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of() [1/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
    _CharT __c,
    size_type __pos = npos) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_last\_not\_of() [2/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
    _CharT __c,
    size_type __pos = npos) const [noexcept]
```

Find last position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of() [3/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C substring.

## Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_last\_not\_of()** [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find last position of a character not in C substring.

## Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C string.

## Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_not\_of()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [std::basic\\_string<\\_CharT>::find\\_last\\_not\\_of\(\)](#), [std::basic\\_string<\\_CharT>::find\\_last\\_not\\_of\(\)](#), and [std::basic\\_string<\\_CharT>::find\\_last\\_not\\_of\(\)](#).

**find\_last\_not\_of()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
    _CharT __c,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

**find\_last\_of()** [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
    _CharT __c,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

**find\_last\_of()** [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C substring.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**find\_last\_of()** [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find last position of a character of C substring.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C string.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character of C string.

**Parameters**

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**find\_last\_of()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Referenced by [std::basic\\_string<\\_CharT>::find\\_last\\_of\(\)](#), and [std::basic\\_string<\\_CharT>::find\\_last\\_of\(\)](#).

**find\_last\_of()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character of string.

**Parameters**

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**front()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic\_string< _CharT, _Traits, _Alloc >::front () [inline]
```

Returns a read/write reference to the data at the first element of the string.

**front()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic\_string< _CharT, _Traits, _Alloc >::front () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

**front()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic\_string< _CharT, _Traits, _Alloc >::front () const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

**front()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic\_string< _CharT, _Traits, _Alloc >::front () [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write reference to the data at the first element of the string.

**get\_allocator()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
allocator_type std::basic\_string< _CharT, _Traits, _Alloc >::get_allocator () const [inline],
[nodiscard], [constexpr], [noexcept]
```

Return copy of allocator used to construct this string.

Referenced by [std::basic\\_string< \\_CharT >::~basic\\_string\(\)](#), [std::basic\\_string< \\_CharT >::assign\(\)](#), [std::basic\\_string< \\_CharT >::clear\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), [reserve\(\)](#), [reserve\(\)](#), and [swap\(\)](#).

**get\_allocator()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
allocator_type std::basic\_string< _CharT, _Traits, _Alloc >::get_allocator () const [inline],
[noexcept]
```

Return copy of allocator used to construct this string.

**insert()** [1/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic\_string< _CharT, _Traits, _Alloc >::insert (
    __const_iterator __p,
    _CharT __c) [inline], [constexpr]
```

Insert one character.

## Parameters

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

## Returns

Iterator referencing newly inserted char.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [2/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
    const_iterator __p,
    _InputIterator __beg,
    _InputIterator __end) [inline], [constexpr]
```

Insert a range of characters.

## Parameters

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

## Returns

Iterator referencing the first inserted char.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [3/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
    const_iterator __p,
    initializer_list< _CharT > __l) [inline], [constexpr]
```

Insert an initializer\_list of characters.

**Parameters**

<a href="#"></a> <code>__p</code>	Iterator referencing location in string to insert at.
<a href="#"></a> <code>__l</code>	The initializer_list of characters to insert.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

**insert() [4/18]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
    const_iterator __p,
    size_type __n,
    _CharT __c) [inline], [constexpr]
```

Insert multiple characters.

**Parameters**

<a href="#"></a> <code>__p</code>	Const_iterator referencing location in string to insert at.
<a href="#"></a> <code>__n</code>	Number of characters to insert
<a href="#"></a> <code>__c</code>	The character to insert.

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by [std::basic\\_string< \\_CharT >::insert\(\)](#), [std::basic\\_string< \\_CharT >::insert\(\)](#), [std::basic\\_string< \\_CharT >::insert\(\)](#), [std::basic\\_string< \\_CharT >::insert\(\)](#), and [std::basic\\_string< \\_CharT >::insert\(\)](#).

**insert() [5/18]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
    iterator __p,
    _CharT __c) [inline]
```

Insert one character.

## Parameters

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

## Returns

Iterator referencing newly inserted char.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [6/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
void std::basic_string<_CharT, _Traits, _Alloc >::insert (
    iterator __p,
    _InputIterator __beg,
    _InputIterator __end) [inline]
```

Insert a range of characters.

## Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[__beg, __end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [7/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc >::insert (
    iterator __p,
    initializer_list<_CharT > __l) [inline]
```

Insert an `initializer_list` of characters.

**Parameters**

<a href="#"><code>__p</code></a>	Iterator referencing location in string to insert at.
<a href="#"><code>__l</code></a>	The initializer_list of characters to insert.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

**insert() [8/18]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc >::insert (
    iterator __p,
    size_type __n,
    _CharT __c) [inline]
```

Insert multiple characters.

**Parameters**

<a href="#"><code>__p</code></a>	Iterator referencing location in string to insert at.
<a href="#"><code>__n</code></a>	Number of characters to insert
<a href="#"><code>__c</code></a>	The character to insert.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert() [9/18]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    const _CharT * __s) [inline], [constexpr]
```

Insert a C string.

**Parameters**

<a href="#"><code>__pos</code></a>	Position in string to insert at.
<a href="#"><code>__s</code></a>	The C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
<i>std::out_of_range</i>	If <i>pos</i> is beyond the end of this string.

Inserts the first *n* characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [10/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    const _CharT * __s) [inline]
```

Insert a C string.

**Parameters**

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
<i>std::out_of_range</i>	If <i>pos</i> is beyond the end of this string.

Inserts the first *n* characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [11/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    const _CharT * __s,
    size_type __n) [inline], [constexpr]
```

Insert a C substring.

**Parameters**

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [12/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    const _CharT * __s,
    size_type __n)
```

Insert a C substring.

**Parameters**

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [13/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    size_type __n,
    _CharT __c) [inline], [constexpr]
```

Insert multiple characters.

## Parameters

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [14/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos,
    size_type __n,
    _CharT __c) [inline]
```

Insert multiple characters.

## Parameters

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [15/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const basic_string<_CharT, _Traits, _Alloc > & __str) [inline], [constexpr]
```

Insert value of a string.

## Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [16/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos1,
    const basic_string<_CharT, _Traits, _Alloc> & __str) [inline]
```

Insert value of a string.

## Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [17/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos1,
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos2,
    size_type __n = npos) [inline], [constexpr]
```

Insert a substring.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in str to insert.
<code>__n</code>	Number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> .

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**insert()** [18/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n = npos) [inline]
```

Insert a substring.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in str to insert.
<code>__n</code>	Number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> .

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**length()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::length () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Referenced by [std::basic\\_string<\\_CharT>::basic\\_string\(\)](#), [std::basic\\_string<\\_CharT>::basic\\_string\(\)](#), [std::\\_\\_cxx11::collate<\\_CharT>::do\\_transform\(\)](#), [std::regex\\_replace\(\)](#), and [reserve\(\)](#).

**length()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::length () const [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

**max\_size()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::max_size () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the size() of the largest possible string.

Referenced by [std::getline\(\)](#), and [std::operator>>\(\)](#).

**max\_size()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::max_size () const [inline], [noexcept]
```

Returns the size() of the largest possible string.

**operator+=()** [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator+= (
    _CharT __c) [inline], [constexpr]
```

Append a character.

**Parameters**

<a href="#">_C</a>	The character to append.
--------------------	--------------------------

**Returns**

Reference to this string.

**operator+=()** [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator+= (
    _CharT __c) [inline]
```

Append a character.

**Parameters**

<code>_↔</code>	The character to append.
<code>_C</code>	

**Returns**

Reference to this string.

**operator+=() [3/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    const _CharT * __s) [inline], [constexpr]
```

Append a C string.

**Parameters**

<code>_↔</code>	The C string to append.
<code>_S</code>	

**Returns**

Reference to this string.

**operator+=() [4/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    const _CharT * __s) [inline]
```

Append a C string.

**Parameters**

<code>_↔</code>	The C string to append.
<code>_S</code>	

**Returns**

Reference to this string.

**operator+=() [5/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline], [constexpr]
```

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

**operator+=() [6/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]
```

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

**operator+=() [7/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    initializer_list< _CharT > __l) [inline], [constexpr]
```

Append an initializer\_list of characters.

**Parameters**

<code>↩</code>	The initializer_list of characters to be appended.
<code>__↩</code>	
<code>↩</code>	
<code>__↩</code>	
<code>/</code>	

**Returns**

Reference to this string.

**operator+=() [8/8]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    initializer_list< _CharT > __l) [inline]
```

Append an initializer\_list of characters.

**Parameters**

<code>↩</code>	The initializer_list of characters to be appended.
<code>__↩</code>	
<code>↩</code>	
<code>__↩</code>	
<code>/</code>	

**Returns**

Reference to this string.

**operator=()** [1/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    _CharT __c) [inline], [constexpr]
```

Set value to string of length 1.

**Parameters**

<code>__c</code>	Source character.
------------------	-------------------

Assigning to a character makes this string length 1 and `(*this)[0] == c`.

**operator=()** [2/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    _CharT __c) [inline]
```

Set value to string of length 1.

**Parameters**

<code>__c</code>	Source character.
------------------	-------------------

Assigning to a character makes this string length 1 and `(*this)[0] == c`.

**operator=()** [3/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [noexcept]
```

Move assign the value of *str* to this string.

**Parameters**

<code>__str</code>	Source string.
--------------------	----------------

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

**operator=()** [4/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [constexpr], [noexcept]
```

Move assign the value of *str* to this string.

**Parameters**

<code>__str</code>	Source string.
--------------------	----------------

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

**operator=()** [5/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    const _CharT * __s) [inline], [constexpr]
```

Copy contents of *s* into this string.

**Parameters**

<code>__s</code>	Source null-terminated string.
------------------	--------------------------------

**operator=()** [6/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    const _CharT * __s) [inline]
```

Copy contents of *s* into this string.

**Parameters**

<code>__s</code>	Source null-terminated string.
------------------	--------------------------------

**operator=()** [7/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline], [constexpr]
```

Assign the value of *str* to this string.

**Parameters**

<code>__str</code>	Source string.
--------------------	----------------

**operator=()** [8/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]
```

Assign the value of *str* to this string.

**Parameters**

<code>__str</code>	Source string.
--------------------	----------------

**operator=()** [9/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    initializer_list< _CharT > __l) [inline], [constexpr]
```

Set value to string constructed from initializer list.

**Parameters**

↩	std::initializer_list.
↩	
↩	
↩	
↩	

**operator=()** [10/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    initializer_list< _CharT > __l) [inline]
```

Set value to string constructed from initializer list.

**Parameters**

↩	std::initializer_list.
↩	
↩	
↩	
↩	

**operator[]()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
    size_type __pos) [inline], [nodiscard], [constexpr]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

**operator[]()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
    size_type __pos) [inline]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

**operator[]()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
    size_type __pos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Referenced by `std::basic_string< _CharT >::back()`, `std::basic_string< _CharT >::back()`, `std::basic_string< _CharT >::back()`, `std::basic_string< _CharT >::front()`, `std::basic_string< _CharT >::front()`, and `std::basic_string< _CharT >::front()`.

**operator[]()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
    size_type __pos) const [inline], [noexcept]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

**pop\_back()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back () [inline]
```

Remove the last character.

The string must be non-empty.

**pop\_back()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back () [inline], [constexpr], [noexcept]
```

Remove the last character.

The string must be non-empty.

**push\_back()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
    _CharT __c) [inline], [constexpr]
```

Append a single character.

**Parameters**

$\leftrightarrow$	Character to append.
<code>_C</code>	

Referenced by `std::__cxx11::collate< _CharT >::do_transform()`, `std::basic_string< _CharT >::operator+=(())`, `std::tr2::operator>>()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`.

**push\_back()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
    _CharT __c) [inline]
```

Append a single character.

**Parameters**

$\leftrightarrow$	Character to append.
<code>_C</code>	

**rbegin()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin () [inline]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

**rbegin()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin () const [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

**rbegin()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

**rbegin()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin () [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

#### rend() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend () [inline]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

#### rend() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend () const [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

#### rend() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

#### rend() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend () [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

#### replace() [1/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    const _CharT * __s) [inline], [constexpr]
```

Replace range of characters with C string.

#### Parameters

 <i>__i1</i>	Iterator referencing start of range to replace.
 <i>__i2</i>	Iterator referencing end of range to replace.
 <i>__s</i>	C string value to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [2/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    const _CharT * __s,
    size_type __n) [inline], [constexpr]
```

Replace range of characters with C substring.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [3/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    const basic_string< _CharT, _Traits, _Alloc > & __str) [inline], [constexpr]
```

Replace range of characters with string.

## Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [4/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    __const_iterator __i1,
    __const_iterator __i2,
    size_type __n,
    _CharT __c) [inline], [constexpr]
```

Replace range of characters with multiple characters.

## Parameters

<code>↵ __i1</code>	Iterator referencing start of range to replace.
<code>↵ __i2</code>	Iterator referencing end of range to replace.
<code>↵ __n</code>	Number of characters to insert.
<code>↵ __c</code>	Character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [5/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    const_iterator __i1,
    const_iterator __i2,
    _InputIterator __k1,
    _InputIterator __k2) [inline], [constexpr]
```

Replace range of characters with range.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [6/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    const_iterator __i1,
    const_iterator __i2,
    initializer_list< _CharT > __l) [inline], [constexpr]
```

Replace range of characters with `initializer_list`.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [7/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    _InputIterator __k1,
    _InputIterator __k2) [inline]
```

Replace range of characters with range.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

**Returns**

Reference to this string.

**Exceptions**

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [8/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s) [inline]
```

Replace range of characters with C string.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [9/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s,
    size_type __n) [inline]
```

Replace range of characters with C substring.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [10/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const basic_string<_CharT, _Traits, _Alloc > & __str) [inline]
```

Replace range of characters with string.

## Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [11/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    initializer_list<_CharT> __l) [inline]
```

Replace range of characters with `initializer_list`.

## Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [12/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
```

```

        iterator __i2,
        size_type __n,
        _CharT __c) [inline]

```

Replace range of characters with multiple characters.

#### Parameters

<a href="#"><code>__i1</code></a>	Iterator referencing start of range to replace.
<a href="#"><code>__i2</code></a>	Iterator referencing end of range to replace.
<a href="#"><code>__n</code></a>	Number of characters to insert.
<a href="#"><code>__c</code></a>	Character to insert.

#### Returns

Reference to this string.

#### Exceptions

<a href="#"><code>std::length_error</code></a>	If new length exceeds <code>max_size()</code> .
--	---

Removes the characters in the range `[__i1,__i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

#### **replace()** [13/22]

```

template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n,
    const basic_string<_CharT, _Traits, _Alloc > & __str) [inline], [constexpr]

```

Replace characters with value from another string.

#### Parameters

<a href="#"><code>__pos</code></a>	Index of first character to replace.
<a href="#"><code>__n</code></a>	Number of characters to be replaced.
<a href="#"><code>__str</code></a>	String to insert.

#### Returns

Reference to this string.

#### Exceptions

<a href="#"><code>std::out_of_range</code></a>	If <code>pos</code> is beyond the end of this string.
<a href="#"><code>std::length_error</code></a>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by `std::basic_string<_CharT>::append()`, `std::basic_string<_CharT>::assign()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, and `std::basic_string<_CharT>::replace()`.

### replace() [14/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos,
    size_type __n,
    const basic_string<_CharT, _Traits, _Alloc> & __str) [inline]
```

Replace characters with value from another string.

#### Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

### replace() [15/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) [inline], [constexpr]
```

Replace characters with value of a C string.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the characters of `__s` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace() [16/22]**

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s) [inline]
```

Replace characters with value of a C string.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the characters of `__s` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [17/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::replace
(
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2) [inline], [constexpr]
```

Replace characters with value of a C substring.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>s</code> to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [18/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2)
```

Replace characters with value of a C substring.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>s</code> to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [19/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n1,
    size_type __n2,
    _CharT __c) [inline], [constexpr]
```

Replace characters with multiple characters.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [20/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n1,
    size_type __n2,
    _CharT __c) [inline]
```

Replace characters with multiple characters.

**Parameters**

<code>__pos</code>	Index of first character to replace.
--------------------	--------------------------------------

## Parameters

<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [21/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos1,
    size_type __n1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n2 = npos) [inline], [constexpr]
```

Replace characters with value from another string.

## Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of str to use.
<code>__n2</code>	Number of characters from str to use.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**replace()** [22/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos1,
    size_type __n1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n2 = npos) [inline]
```

Replace characters with value from another string.

**Parameters**

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of str to use.
<code>__n2</code>	Number of characters from str to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**reserve()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve () [constexpr]
```

Equivalent to `shrink_to_fit()`.

References `capacity()`, `get_allocator()`, and `length()`.

Referenced by `std::basic_string< _CharT >::push_back()`, and `std::basic_string< _CharT >::shrink_to_fit()`.

**reserve()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve ()
```

Equivalent to `shrink_to_fit()`.

**reserve()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
    size_type __res_arg) [constexpr]
```

Attempt to preallocate enough memory for specified number of characters.

## Parameters

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

## Exceptions

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

References [capacity\(\)](#), [get\\_allocator\(\)](#), and [std::size\(\)](#).

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::tr2::operator>>\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#).

**reserve()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::reserve (
    size_type __res_arg)
```

Attempt to preallocate enough memory for specified number of characters.

## Parameters

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

## Exceptions

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

**resize()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::resize (
    size_type __n) [inline], [constexpr]
```

Resizes the string to the specified number of characters.

## Parameters

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

**resize()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
    size_type __n) [inline]
```

Resizes the string to the specified number of characters.

**Parameters**

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

**resize()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
    size_type __n,
    _CharT __c) [constexpr]
```

Resizes the string to the specified number of characters.

**Parameters**

<code>__n</code>	Number of characters the string should contain.
<code>__c</code>	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

References [append\(\)](#), [erase\(\)](#), and [size\(\)](#).

Referenced by [std::basic\\_string< \\_CharT >::resize\(\)](#).

**resize()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
    size_type __n,
    _CharT __c)
```

Resizes the string to the specified number of characters.

**Parameters**

<code>__n</code>	Number of characters the string should contain.
<code>__c</code>	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

**rfind()** [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
    _CharT __c,
    size_type __pos = npos) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [npos](#), and [std::size\(\)](#).

**rfind()** [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
    _CharT __c,
    size_type __pos = npos) const [noexcept]
```

Find last position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**rfind()** [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [nodiscard], [constexpr], [noexcept]
```

Find last position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
------------------	---------------------

<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::min\(\)](#), [npos](#), and [std::size\(\)](#).

#### **rfind()** [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n) const [noexcept]
```

Find last position of a C substring.

#### Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

#### **rfind()** [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr]
```

Find last position of a C string.

#### Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (
    const _CharT * __s,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**rfind()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = npos) const [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Referenced by [std::basic\\_string<\\_CharT>::find\\_last\\_of\(\)](#), [std::basic\\_string<\\_CharT>::rfind\(\)](#), [std::basic\\_string<\\_CharT>::rfind\(\)](#), [std::basic\\_string<\\_CharT>::rfind\(\)](#), and [std::basic\\_string<\\_CharT>::rfind\(\)](#).

**rfind()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

## shrink\_to\_fit() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic\_string<_CharT, _Traits, _Alloc >::shrink_to_fit () [inline], [constexpr], [noexcept]
A non-binding request to reduce capacity() to size().
```

## shrink\_to\_fit() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc >::shrink_to_fit () [inline], [noexcept]
A non-binding request to reduce capacity() to size().
```

```
size() [1/2]
```

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::size () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Referenced by `std::basic_string<_CharT>::append()`, `std::basic_string<_CharT>::append()`, `std::basic_regex<char>::assign()`, `std::basic_string<_CharT>::assign()`, `std::basic_string<_CharT>::assign()`, `std::basic_string<_CharT>::assign()`, `std::basic_string<_CharT>::assign()`, `std::basic_string<_CharT>::at()`, `std::basic_string<_CharT>::at()`, `std::basic_string<_CharT>::back()`, `std::basic_string<_CharT>::back()`, `std::basic_string<_CharT>::cend()`, `std::basic_string<_CharT>::compare()`, `std::basic_string<_CharT>::compare()`, `std::basic_string<_CharT>::compare()`, `std::basic_string<_CharT>::empty()`, `std::basic_string<_CharT>::end()`, `std::basic_string<_CharT>::end()`, `std::basic_string<_CharT>::end()`, `std::basic_string<_CharT>::find()`, `std::basic_string<_CharT>::find_first_not_of()`, `std::basic_string<_CharT>::find_first_of()`, `__gnu_debug::basic_string<char>::find_last_of()`, `std::basic_string<_CharT>::find_last_of()`, `std::match_results<_BidirectionalIterator>::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::from_bytes()`, `std::basic_string<_CharT>::insert()`, `std::basic_string<_CharT>::length()`, `std::operator+`, `std::operator+`, `std::operator+`, `std::operator+`, `std::operator+`, `std::operator==()`, `std::tr2::operator>>()`, `std::basic_string<_CharT>::operator[]()`, `std::basic_string<_CharT>::operator[]()`, `std::basic_string<_CharT>::pop_back()`, `std::basic_string<_CharT>::pop_back()`, `std::basic_string<_CharT>::push_back()`, `std::basic_string<_CharT>::replace()`, `std::basic_string<_CharT>::replace()`, `resize()`, `std::wstring_convert<_Codecvt, _Elem, _Wide_alloc>::wstring_convert()`, `std::regex_traits<_CharT>::transform()`, and `std::regex_traits<_CharT>::transform_primary()`.

```
size() [2/2]
```

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic\_string< _CharT, _Traits, _Alloc >::size () const [inline], [noexcept]
Returns the number of characters in the string, not including any null-termination.
```

**substr()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr (
    size_type __pos = 0,
    size_type __n = npos) const [inline], [nodiscard], [constexpr]
```

## Parameters

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

## Returns

The new string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

**substr()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string std::basic_string<_CharT, _Traits, _Alloc>::substr (
    size_type __pos = 0,
    size_type __n = npos) const [inline]
```

Get a substring.

## Parameters

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

## Returns

The new string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

**swap()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::swap (
    basic_string<_CharT, _Traits, _Alloc> & __s) [constexpr], [noexcept]
```

Swap contents with another string.

## Parameters

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

References [basic\\_string\(\)](#), and [get\\_allocator\(\)](#).

Referenced by [std::basic\\_string<\\_CharT>::assign\(\)](#), and [std::basic\\_string<\\_CharT>::operator=\(\)](#).

**swap()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::swap (
    basic_string< _CharT, _Traits, _Alloc > & __s) [noexcept]
```

Swap contents with another string.

**Parameters**

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

**5.233.4 Member Data Documentation****npos**

```
template<typename _CharT, typename _Traits, typename _Alloc>
static const size_type std::basic_string< _CharT, _Traits, _Alloc >::npos [static]
```

Value returned by various member functions when they fail.

Referenced by [find\(\)](#), [find\(\)](#), [find\\_first\\_not\\_of\(\)](#), [find\\_first\\_not\\_of\(\)](#), [find\\_first\\_of\(\)](#), [find\\_last\\_not\\_of\(\)](#), [find\\_last\\_not\\_of\(\)](#), [find\\_last\\_of\(\)](#), [rfind\(\)](#), and [rfind\(\)](#).

### 5.237.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringbuf< _CharT, _Traits, _Alloc >
```

The actual work of input and output (for std::string).

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.)

For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

### 5.237.2 Constructor & Destructor Documentation

#### basic\_stringbuf() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf () [inline]
```

Starts with an empty string buffer.

The default constructor initializes the parent class using its own default ctor.

#### basic\_stringbuf() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
    ios_base::openmode __mode) [inline], [explicit]
```

Starts with an empty string buffer.

#### Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

The default constructor initializes the parent class using its own default ctor.

#### basic\_stringbuf() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
    const __string_type & __str,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]
```

Starts with an existing string buffer.

#### Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

### 5.237.3 Member Function Documentation

#### eback()

```
template<typename _CharT, typename _Traits>
```

```
char_type * std::basic\_streambuf< \_CharT, \_Traits >::eback \(\) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::imbue\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::pbackfail\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

#### egptr()

```
template<typename _CharT, typename _Traits>
```

```
char_type * std::basic\_streambuf< \_CharT, \_Traits >::egptr \(\) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::underflow\(\)](#), [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >::underflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#), and [xsgetn\(\)](#).

#### epptr()

```
template<typename _CharT, typename _Traits>
```

```
char_type * std::basic\_streambuf< \_CharT, \_Traits >::epptr \(\) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Referenced by [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsputn\(\)](#), and [xsputn\(\)](#).

**gbump()**

```
template<typename _CharT, typename _Traits>
void std::basic_stringbuf<_CharT, _Traits, _Alloc>::gbump (
    int __n) [inline], [protected], [inherited]
```

Moving the read position.

**Parameters**

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the read position without returning any data.

Referenced by `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**getloc()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf<_CharT, _Traits>::getloc () const [inline], [inherited]
```

Locale access.

**Returns**

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

**gptr()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf<_CharT, _Traits>::gptr () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::xsgetn()`, and `xsgetn()`.

**imbue()**

```
template<typename _CharT, typename _Traits>
virtual void std::basic_streambuf<_CharT, _Traits>::imbue (
    const locale & __loc) [inline], [protected], [virtual], [inherited]
```

Changes translations.

**Parameters**

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

**Note**

Base class version does nothing.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char >`, `std::basic_filebuf< char >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< wchar_t >`, and `std::basic_filebuf< wchar_t >`.

**in\_avail()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail () [inline], [inherited]
Looking ahead into the stream.
```

**Returns**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

**overflow()**

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::overflow (
    int_type __c = traits_type::eof()) [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

**Parameters**

<code>_↵</code>	An additional character to consume.
<code>_c</code>	

**Returns**

`eof()` to indicate failure, something else (usually `_c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `_c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_mode`, `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::epptr()`, `std::basic_streambuf< _CharT, _Traits >::in`, `std::max()`, `std::min()`, `std::ios_base::out`, `std::basic_streambuf< _CharT, _Traits >::pbase()`, `std::basic_streambuf< _CharT, _Traits >::pbump()`, `std::basic_streambuf< _CharT, _Traits >::pptr()`, `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`, and `std::basic_streambuf< _CharT, _Traits >::setg()`.

**pbackfail()**

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::pbackfail (
    int_type __c = traits_type::eof()) [protected], [virtual]
```

Tries to back up the input sequence.

**Parameters**

<code>_↵</code>	The character to be inserted back into the sequence.
<code>_c</code>	

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_mode`, `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::gbump()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::ios_base::out`.

**pbase()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pbase () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::sync()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**pbump()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::pbump (
    int __n) [inline], [protected], [inherited]
```

Moving the write position.

**Parameters**

<code>_↵</code>	The delta by which to move.
<code>_n</code>	

This just advances the write position without returning any data.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`.

**pptr()**

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pptr () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsputn\(\)](#), and [xsputn\(\)](#).

**pubimbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
    const locale & __loc) [inline], [inherited]
```

Entry point for imbue().

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls the derived imbue(\_\_loc).

**pubseekoff()**

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

**Parameters**

<code>__off</code>	Offset.
<code>__way</code>	Value for ios_base::seekdir.
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekoff function.

**pubseekpos()**

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

**Parameters**

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

**pubsetbuf()**

```
template<typename _CharT, typename _Traits>
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

**pubsync()**

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync () [inline], [inherited]
```

Calls virtual `sync` function.

Referenced by `std::basic_istream< _CharT, _Traits >::sync()`.

**sbumpc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc () [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`.

**seekoff()**

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_mode`, `std::ios_base::cur`, `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::e`, `std::ios_base::end`, `std::basic_streambuf< _CharT, _Traits >::eptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, `std::ios_base::in`, `std::ios_base::out`, `std::basic_streambuf< _CharT, _Traits >::pbase()`, `std::basic_streambuf< _CharT, _Traits >::pptr()`, and `std::basic_streambuf< _CharT, _Traits >::setg()`.

**seekpos()**

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

References [\\_M\\_mode](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::eback\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::egptr\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::epptr\(\)](#), [std::ios\\_base::in](#), [std::ios\\_base::out](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pbase\(\)](#) and [std::basic\\_streambuf< \\_CharT, \\_Traits >::setg\(\)](#).

**setbuf()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
virtual __streambuf_type * std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf (
    char_type * __s,
    streamsize __n) [inline], [protected], [virtual]
```

Manipulates the buffer.

**Parameters**

<a href="#">_↵ _s</a>	Pointer to a buffer area.
<a href="#">_↵ _n</a>	Size of <a href="#">__s</a> .

**Returns**

`this`

If no buffer has already been created, and both `__s` and `__n` are non-zero, then `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.↵buffering> for more.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

**setg()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
    char_type * __gbeg,
    char_type * __gnext,
    char_type * __gend) [inline], [protected], [inherited]
```

Setting the three read area pointers.

**Parameters**

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.

<code>__gend</code>	A pointer.
---------------------	------------

**Postcondition**

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::wbuffer\\_convert\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekpos\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsgetn\(\)](#).

**setp()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf<_CharT, _Traits>::setp (
    char_type * __pbeg,
    char_type * __pend) [inline], [protected], [inherited]
```

Setting the three write area pointers.

**Parameters**

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

**Postcondition**

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::wbuffer\\_convert\(\)](#).

**sgetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sgetc () [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#).

**sgetn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Entry point for `xsgetn`.

## Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

**showmanyc()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc () [inline], [protected], [virtual]
```

Investigating the data available.

## Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

## Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

**snextc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc () [inline], [inherited]
```

Getting the next character.

## Returns

The next character, or `eof`.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char_type, traits_type >::ignore()`, `std::basic_istream< char_type, traits_type >::operator>>()`, and `std::basic_istream< char_type, traits_type >::putback()`.

**sputbackc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
    char_type __c) [inline], [inherited]
```

Pushing characters back into the input stream.

**Parameters**

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**sputc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sputc (
    char_type __c) [inline], [inherited]
```

Entry point for all single-character output functions.

**Parameters**

<code>__c</code>	A character to output.
------------------	------------------------

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::overflow()`.

**sputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sputn (
    const char_type * __s,
    streamsize __n) [inline], [inherited]
```

Entry point for all single-character output functions.

**Parameters**

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

**str()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str () const & [inline], [nodiscard]
Copying out the string buffer.
```

**Returns**

A copy of one of the underlying sequences.

If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1

**str()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str (
    const __string_type & __s) [inline]
Setting a new buffer.
```

**Parameters**

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Deallocates any previous stored sequence, then copies *s* to use as a new one.

**sungetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc () [inline], [inherited]
Moving backwards in the input stream.
```

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Referenced by `std::basic_istream< char_type, traits_type >::sentry::sentry()`.

**sync()**

```
template<typename _CharT, typename _Traits>
virtual int std::basic_streambuf< _CharT, _Traits >::sync () [inline], [protected], [virtual],
[inherited]
Synchronizes the buffer arrays with the controlled sequences.
```

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_filebuf< wchar_t >`, `std::basic_filebuf< wchar_t >`, and `std::wbuffer_convert< _Codecvt, _Elem, _Tr >`.

**uflow()**

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow () [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Referenced by `xsgetn()`.

**underflow()**

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::underflow () [protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `_M_mode`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::ios_base::in`.

**xsgetn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (
    char_type * __s,
    streamsize __n) [protected], [virtual], [inherited]
```

Multiple character extraction.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), and [std::basic\\_filebuf< wchar\\_t >](#).  
References [egptr\(\)](#), [gptra\(\)](#), [std::min\(\)](#), and [uflow\(\)](#).

**xspn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::xspn (
    const char_type * __s,
    streamsize __n)    [protected], [virtual], [inherited]
```

Multiple character insertion.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), and [std::basic\\_filebuf< wchar\\_t >](#).  
References [eptra\(\)](#), [std::min\(\)](#), [overflow\(\)](#), and [pptra\(\)](#).

**5.237.4 Member Data Documentation****\_M\_buf\_locale**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale    [protected], [inherited]

## Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (long double &__f)`

## Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

#### 5.238.1 Detailed Description

template<typename \_CharT, typename \_Traits, typename \_Alloc>  
class std::basic\_stringstream<\_CharT, \_Traits, \_Alloc>

Controlling input and output for std::string.

Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits</a> <_CharT>.
<a href="#">_Alloc</a>	Allocator type, defaults to <a href="#">allocator</a> <_CharT>.

This class supports reading from and writing to objects of type [std::basic\\_string](#), using the inherited functions from [std::basic\\_istream](#). To control the associated sequence, an instance of [std::basic\\_stringbuf](#) is used, which this page refers to as *sb*.

#### 5.238.2 Member Typedef Documentation

##### event\_callback

typedef void(\* [std::ios\\_base::event\\_callback](#)) ([event](#) \_\_e, [ios\\_base](#) &\_\_b, int \_\_i) [inherited]

The type of an event callback function.

**Parameters**

<code>_↔ _e</code>	One of the members of the event enum.
<code>_↔ _b</code>	Reference to the <code>ios_base</code> object.
<code>_↔ _i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**istate**

```
typedef _Ios_Iostate std::ios_base::istate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `istate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**openmode**

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**seekdir**

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

### 5.238.3 Member Enumeration Documentation

#### event

enum `std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

### 5.238.4 Constructor & Destructor Documentation

#### basic\_stringstream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream () [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using the mode `in|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer. That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

#### basic\_stringstream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream (
    ios_base::openmode __m) [inline], [explicit]
```

Starts with an empty string buffer.

#### Parameters

<code>__m</code>	Whether the buffer can read, or write, or both.
------------------	---

Initializes `sb` using the mode from `__m`, and passes `&sb` to the base class initializer. Does not allocate any buffer. That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

#### basic\_stringstream() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream (
    const __string_type & __str,
    ios_base::openmode __m = ios_base::out | ios_base::in) [inline], [explicit]
```

Starts with an existing string buffer.

#### Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__m</code>	Whether the buffer can read, or write, or both.

Initializes `sb` using `__str` and `__m`, and passes `&sb` to the base class initializer. That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

#### ~basic\_stringstream()

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream<_CharT, _Traits, _Alloc>::~~basic_stringstream () [inline]
```

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

### 5.238.5 Member Function Documentation

#### **`_M_getloc()`**

```
const locale & std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::time\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::time\\_put<\\_CharT, \\_OutIter>::put\(\)](#).

#### **`bad()`**

```
template<typename _CharT, typename _Traits>  
bool std::basic\_ios<\_CharT, \_Traits>::bad () const [inline], [nodiscard], [inherited]
```

Fast error checking.

##### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#).

#### **`clear()`**

```
template<typename _CharT, typename _Traits>  
void std::basic\_ios<\_CharT, \_Traits>::clear (  
    iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

##### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

References [std::ios\\_base::badbit](#), [exceptions\(\)](#), [rdbuf\(\)](#), and [rdstate\(\)](#).

Referenced by [std::basic\\_ios<char\\_type, traits\\_type>::exceptions\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<char\\_type, traits\\_type>::unget\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

#### **`copyfmt()`**

```
template<typename _CharT, typename _Traits>  
basic\_ios<\_CharT, \_Traits> & std::basic\_ios<\_CharT, \_Traits>::copyfmt (  
    const basic\_ios<\_CharT, \_Traits> & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

##### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [basic\\_ios\(\)](#), [std::\\_\\_addressof\(\)](#), [exceptions\(\)](#), [fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::eof() const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

**exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::exceptions() const [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [clear\(\)](#), and [copyfmt\(\)](#).

**exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::exceptions (
    iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
```

```
f.setstate (std::ios_base::badbit);

std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}
```

### fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [nodiscard], [inherited]
Fast error checking.
```

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Referenced by [std::basic\\_ios< char\\_type, traits\\_type >::operator bool\(\)](#), [std::basic\\_ios< char\\_type, traits\\_type >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::regex\\_traits< \\_Ch\\_type >::value\(\)](#).

### fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [nodiscard], [inherited]
Retrieves the empty character.
```

#### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Referenced by [copyfmt\(\)](#).

### fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

#### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

### flags() [1/2]

```
fmtflags std::ios_base::flags () const [inline], [nodiscard], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::chrono::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, and `std::operator>>()`.

**flags()** [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

References `fmtflags`.

**flush()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

`*this`

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream<_CharT, _Traits>::gcount () const [inline], [inherited]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

**get()** [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**get()** [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb,widen("\n"))`.

**get()** [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**get()** [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c) [inherited]
```

Simple extraction.

## Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

## Returns

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

## Note

This function is not overloaded on signed char and unsigned char.

References `_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**get()** [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

## Returns

`*this`

Returns `get(__s, __n, widen('\n'))`.

**get()** [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>](#):

**getline()** [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

**Returns**

\*this

Returns `getline(__s,__n,widen("\n"))`.

**getline()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References `_M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**getline()** [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**getloc()**

```
locale std::ios_base::getloc () const [inline], [nodiscard], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale::global C++ locale`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::basic_ios<_CharT, _Traits>::do_get()`, `std::chrono::operator<<()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

**good()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::good () const [inline], [nodiscard], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**ignore()** [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    void ) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**ignore()** [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**ignore()** [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n,
    int_type __delim) [inherited]
```

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [\\_M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**imbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::getloc()`, `std::ios_base::imbue()`, and `rdbuf()`.

Referenced by `std::chrono::operator<<()`.

**init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::init (
    basic_streambuf<_CharT, _Traits> * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios<char_type, traits_type>::basic_ios()`, and `std::basic_ostream<char_type, traits_type>::basic_ostream()`.

**iword()**

```
long & std::ios_base::iword (
    int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

References `iword()`.

Referenced by `iword()`.

**narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios<_CharT, _Traits>::narrow (
    char_type __C,
    char __dfault) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator"!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

**operator<<() [1/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(* __pf )(__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<() [2/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(* __pf )(__ostream_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<() [3/17]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**operator<<()** [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

## Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

↔	A variable of builtin floating point type.
↔	
↔	
↔	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<() [7/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

↔	A variable of builtin floating point type.
↔	
↔	
↔	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<() [8/17]**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

↔	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**operator<<()** [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**operator<<()** [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    short __n) [inherited]
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [basic\\_ostream\(\)](#), [std::ios\\_base::badbit](#), [std::ostreambuf\\_iterator<\\_CharT, \\_Traits>::failed\(\)](#), [std::ios\\_base::goodbit](#), [std::num\\_put<\\_CharT, \\_Outiter>::put\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator<<()** [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator<<()** [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**operator>>()** [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __ios_type &(* __pf) (__ios_type &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type & (* __pf ) ( __istream_type & ) ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**operator>>()** [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

<code>↔</code>	A variable of builtin floating point type.
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>f</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

<code>↔</code>	A variable of builtin floating point type.
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>f</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
    int & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::use\\_facet\(\)](#).

**operator>>()** [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    ios_base &(* __pf ) (ios_base &)) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**operator>>()** [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::ios\\_base::goodbit](#), and [std::use\\_facet\(\)](#).

**operator>>()** [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>()** [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_ \leftarrow$ $\_n$	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>() [15/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_ \leftarrow$ $\_n$	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>() [16/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

$\_ \leftarrow$ $\_n$	A variable of builtin integral type.
--------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**operator>>() [17/17]**

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of pointer type.
<code>_p</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**peek()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

## Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

**precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [nodiscard], [inherited]
```

Flags access.

## Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::chrono::operator<<()`.

**precision()** [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec) [inline], [inherited]
```

Changing flags.

## Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

## Returns

The previous value of `precision()`.

**put()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c) [inherited]
```

Simple insertion.

**Parameters**

<div><div><div><div><div><div><span><b>_</b></span></div></div></div><div><div><div><span><b>↔</b></span></div></div><div><div><span><b>_c</b></span></div></div></div></div></div></div>	The character to insert.
---	--------------------------

**Returns**

\*this

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits](#)

**putback()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

<div><div><div><div><div><div><span><b>_</b></span></div></div></div><div><div><div><span><b>↔</b></span></div></div><div><div><span><b>_c</b></span></div></div></div></div></div></div>	The character to push back into the input stream.
---	---

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#).

**pword()**

```
void *& std::ios_base::pword (
    int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

<div><div><div><div><div><div><span><b>_</b></span></div></div></div><div><div><div><span><b>↔</b></span></div></div><div><div><span><b>_ix</b></span></div></div></div></div></div></div>	Index into the array.
--	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pwd` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

References [clear\(\)](#).

**rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type * std::basic_stringstream< _CharT, _Traits, _Alloc >::rdbuf () const [inline],
[nodiscard]
```

Accessing the underlying buffer.

**Returns**

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

**rdstate()**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< char_type, traits_type >::bad()`, `clear()`, `std::basic_ios< char_type, traits_type >::eof()`,

`std::basic_ios< char_type, traits_type >::fail()`, `std::basic_ios< char_type, traits_type >::good()`, `std::basic_istream< _CharT, _Traits >::`

`std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char_type, traits_type >::`

and `std::basic_istream< _CharT, _Traits >::unset()`.

**read()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**readsome()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called A here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters

- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::](#) and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

### `register_callback()`

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

References [fmtflags](#).

### `seekg()` [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

#### Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

#### Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::](#) and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

### `seekg()` [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos) [inherited]
```

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekp() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**seekp() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
    pos_type __pos) [inherited]
```

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**setf()** [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

References [fmtflags](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**setf()** [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

References [fmtflags](#).

**setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), and [std::ws\(\)](#).

**str()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_stringstream< _CharT, _Traits, _Alloc >::str () const & [inline], [nodiscard]
Copying out the string buffer.
```

**Returns**

`rdbuf ()->str ()`

**str()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (
    const __string_type & __s) [inline]
Setting a new buffer.
```

**Parameters**

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rdbuf ()->str (s)`.

**sync()**

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
Synchronizing the stream buffer.
```

**Returns**

0 on success, -1 on failure

If `rdbuf ()` is a null pointer, returns -1.

Otherwise, calls `rdbuf ()->pubsync ()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount ()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
Interaction with the standard C I/O objects.
```

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**tellg()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**tellp()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp () [inherited]
```

Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**tie() [1/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `copyfmt()`.

**tie() [2/2]**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**ungetc()**

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ungetc (
    void ) [inherited]
```

Unextracting the previous character.

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `_M_gcount`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**unsetf()**

```
void std::ios_base::unsetf (
    fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

References `fmtflags`.

**widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios<char_type, traits_type>::fill()`, `std::getline()`, `std::getline()`, and `std::tr2::operator>>()`.

**width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

**width()** [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**write()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::write (
    const char_type * __s,
    streamsize __n) [inherited]
```

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

\*this

Characters are copied from `___s` and inserted into the stream until one of the following happens:

- `___n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**xalloc()**

```
static int std::ios_base::xalloc () throw ( ) [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.238.6 Member Data Documentation****M\_gcount**

```
template<typename _CharT, typename _Traits>
```

```
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by [get\(\)](#), [get\(\)](#), [get\(\)](#), [get\(\)](#), [getline\(\)](#), [ignore\(\)](#), [ignore\(\)](#), [ignore\(\)](#), [putback\(\)](#), [read\(\)](#), [readsome\(\)](#), and [unget\(\)](#).

**adjustfield**

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Referenced by [std::num\\_put< \\_CharT, \\_Outiter >::do\\_put\(\)](#), [std::internal\(\)](#), [std::left\(\)](#), and [std::right\(\)](#).

**app**

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsputn\(\)](#).

**ate**

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#).

**badbit**

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::tellg\(\)](#), and [std::ws\(\)](#).

**basefield**

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Referenced by [std::dec\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::hex\(\)](#), and [std::oct\(\)](#).

**beg**

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::seekpos\(\)](#).

**binary**

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::showmanyc\(\)](#).

**boolalpha**

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::noboolalpha\(\)](#).

**cur**

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::imbue\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::pbackfail\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::seekoff\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits>::seekoff\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#).

**dec**

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::open\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#).

**eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_time\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::seekg\(\)](#), and [std::ws\(\)](#).

**failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char\\_type, traits\\_type>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#).

**fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**floatfield**

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**goodbit**

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#).

`std::basic_ostream< char_type, traits_type >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char_type, traits_type >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::ws()` and `std::ws()`.

## hex

const `fmtflags` `std::ios_base::hex` [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::hex()`.

## in

const `openmode` `std::ios_base::in` [static], [inherited]

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::xsgetn()` and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

## internal

const `fmtflags` `std::ios_base::internal` [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

## left

const `fmtflags` `std::ios_base::left` [static], [inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

## oct

const `fmtflags` `std::ios_base::oct` [static], [inherited]

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

## out

const `openmode` `std::ios_base::out` [static], [inherited]

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

## right

const `fmtflags` `std::ios_base::right` [static], [inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.) Referenced by [std::right\(\)](#).

### scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

### showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

### showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

### showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

### skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

### trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

### unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

### uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

#### 5.239.1 Detailed Description

A Bernoulli random number distribution.

Generates a sequence of true and false values with likelihood  $p$  that true will come up and  $(1 - p)$  that false will appear.

Since

C++11

#### 5.239.2 Member Typedef Documentation

##### result\_type

```
typedef bool std::bernoulli_distribution::result_type
```

The type of the range of the distribution.

### 5.239.3 Constructor & Destructor Documentation

#### **bernoulli\_distribution()** [1/2]

```
std::bernoulli_distribution::bernoulli_distribution () [inline]
```

Constructs a Bernoulli distribution with likelihood 0.5.

References [bernoulli\\_distribution\(\)](#).

Referenced by [bernoulli\\_distribution\(\)](#), and [operator==](#).

#### **bernoulli\_distribution()** [2/2]

```
std::bernoulli_distribution::bernoulli_distribution (
    double __p) [inline], [explicit]
```

Constructs a Bernoulli distribution with likelihood p.

#### Parameters

<a href="#"><math>\leftrightarrow</math></a>	[IN] The likelihood of a true result being returned. Must be in the interval [0, 1].
<a href="#">_p</a>	

### 5.239.4 Member Function Documentation

#### **max()**

```
result_type std::bernoulli_distribution::max () const [inline]
```

Returns the least upper bound value of the distribution.

References [std::numeric\\_limits<\\_Tp>::max\(\)](#).

#### **min()**

```
result_type std::bernoulli_distribution::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

References [std::numeric\\_limits<\\_Tp>::min\(\)](#).

#### **operator()()**

```
template<typename _UniformRandomNumberGenerator>
result_type std::bernoulli_distribution::operator() (
    _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

References [operator\(\)\(\)](#).

Referenced by [operator\(\)\(\)](#).

#### **p()**

```
double std::bernoulli_distribution::p () const [inline]
```

Returns the p parameter of the distribution.

#### **param()** [1/2]

```
param_type std::bernoulli_distribution::param () const [inline]
```

Returns the parameter set of the distribution.

Referenced by [std::operator>>\(\)](#).

**param()** [2/2]

```
void std::bernoulli_distribution::param (
    const param\_type & __param) [inline]
```

Sets the parameter set of the distribution.

**Parameters**

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

**reset()**

```
void std::bernoulli_distribution::reset () [inline]
```

Resets the distribution state.

Does nothing for a Bernoulli distribution.

**5.239.5 Friends And Related Symbol Documentation****operator==**

```
bool operator== (
    const bernoulli\_distribution & __d1,
    const bernoulli\_distribution & __d2) [friend]
```

Return true if two Bernoulli distributions have the same parameters.

References [bernoulli\\_distribution\(\)](#).

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

**5.240 `std::bidirectional_iterator_tag` Struct Reference**

```
#include <stl_iterator_base_types.h>
```

Inheritance diagram for `std::bidirectional_iterator_tag`:

#### 5.240.1 Detailed Description

Bidirectional iterators support a superset of forward iterator operations.  
The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

### 5.242.1 Detailed Description

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >
```

Const node iterator.

### 5.242.2 Member Typedef Documentation

#### [const\\_reference](#)

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::const_reference
Iterator's __const reference type.
```

### difference\_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial\_iterator\_difference\_type \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type
Difference type.
```

### iterator\_category

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial\_iterator\_tag \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_↵
Iterator, Iterator, _Alloc >::iterator_category
Category.
```

### metadata\_const\_reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef rebind\_traits<_Alloc,metadata\_type>::const_reference \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference
Const metadata reference type.
```

### metadata\_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Node::metadata_type \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_↵
Iterator, Iterator, _Alloc >::metadata_type
Metadata type.
```

### reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Const_Iterator \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_Iterator,
Iterator, _Alloc >::reference
Iterator's reference type.
```

### value\_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Const_Iterator \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_Iterator,
Iterator, _Alloc >::value_type
Iterator's value type.
```

## 5.242.3 Member Function Documentation

### get\_l\_child()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bin\_search\_tree\_const\_node\_it\_< Node, Const_Iterator, Iterator, _Alloc > \_\_gnu\_pbds::detail::bin\_search\_tree\_con
Node, Const_Iterator, Iterator, _Alloc >::get_l_child () const [inline]
Returns the \_\_const node iterator associated with the left node.
```

### get\_metadata()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
metadata\_const\_reference \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_Iterator,
Iterator, _Alloc >::get_metadata () const [inline]
```

Metadata access.

### `get_r_child()`

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::get_r_child () const [inline]
Returns the __const node iterator associated with the right node.
```

### `operator!=(())`

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator!= (
    const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
    other) const [inline]
Compares (negatively) to a different iterator object.
```

### `operator*()`

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator,
_Alloc >::operator* () const [inline]
Access.
```

### `operator==(())`

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator== (
    const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
    other) const [inline]
Compares to a different iterator object.
```

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

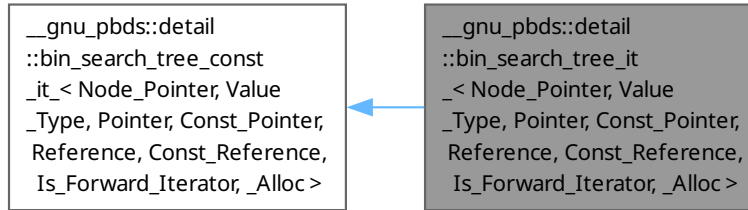

## 5.243 `__gnu_pbds::detail::bin_search_tree_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc > Class Template Reference`

```

### 5.244.1 Detailed Description

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >
```

Node iterator.

### 5.244.2 Member Typedef Documentation

#### **const\_reference**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _↵
_Alloc >::const_reference
Iterator's __const reference type.
```

#### **difference\_type**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial\_iterator\_difference\_type __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type [inherited]
Difference type.
```

#### **iterator\_category**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial\_iterator\_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↵
Iterator, Iterator, _Alloc >::iterator_category [inherited]
Category.
```

**metadata\_const\_reference**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef rebind\_traits<_Alloc, metadata\_type>::const_reference \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference [inherited]
Const metadata reference type.
```

**metadata\_type**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Node::metadata_type \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_Iterator, Iterator, Iterator, _Alloc >::metadata_type [inherited]
Metadata type.
```

**reference**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Iterator \_\_gnu\_pbds::detail::bin\_search\_tree\_node\_it\_< Node, Const_Iterator, Iterator, _Alloc >::reference
Iterator's reference type.
```

**value\_type**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Iterator \_\_gnu\_pbds::detail::bin\_search\_tree\_node\_it\_< Node, Const_Iterator, Iterator, _Alloc >::value_type
Iterator's value type.
```

**5.244.3 Member Function Documentation****get\_l\_child()**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bin\_search\_tree\_node\_it\_< Node, Const_Iterator, Iterator, _Alloc > \_\_gnu\_pbds::detail::bin\_search\_tree\_node\_it\_<
Node, Const_Iterator, Iterator, _Alloc >::get_l_child () const [inline]
Returns the node iterator associated with the left node.
```

**get\_metadata()**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
metadata\_const\_reference \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_Iterator,
Iterator, _Alloc >::get_metadata () const [inline], [inherited]
Metadata access.
```

**get\_r\_child()**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bin\_search\_tree\_node\_it\_< Node, Const_Iterator, Iterator, _Alloc > \_\_gnu\_pbds::detail::bin\_search\_tree\_node\_it\_<
Node, Const_Iterator, Iterator, _Alloc >::get_r_child () const [inline]
Returns the node iterator associated with the right node.
```

**operator!=(())**

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const_Iterator, Iterator, _Alloc
>::operator!=(
```

```
const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
other) const [inline], [inherited]
```

Compares (negatively) to a different iterator object.

#### operator\*()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >↵
::operator* () const [inline]
```

Access.

#### operator==( )

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator==(
```

```
const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
other) const [inline], [inherited]
```

Compares to a different iterator object.

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

## 5.245 \_\_gnu\_pbds::detail::bin\_search\_tree\_traits< Key, Mapped, Cmp\_Fn, Node\_Update, Node, \_Alloc > Struct Template Reference

```
#include <traits.hpp>
```

### Public Types

- typedef [bin\\_search\\_tree\\_const\\_it\\_< typename node\\_alloc\\_traits::pointer, typename \[type\\\_traits::value\\\_type\]\(#\), typename \[type\\\_traits::pointer\]\(#\), typename \[type\\\_traits::const\\\_pointer\]\(#\), typename \[type\\\_traits::reference\]\(#\), typename \[type\\\_traits::const\\\_reference\]\(#\), false, \\_Alloc >](#) **const\_reverse\_iterator**

### 5.245.1 Detailed Description

```
template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr,
class Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >
```

Binary search tree traits, primary template.

## 5.245.2 Member Typedef Documentation

`node_const_iterator`

```
template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_CItr, class Node_↵
Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
typedef bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::k
Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

The documentation for this struct was generated from the following file:

- [bin\\_search\\_tree\\_/traits.hpp](#)

5.246 `__gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >` Struct Template Reference

```
#include <traits.hpp>
```

## Public Types

- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc >` **const\_reverse\_iterator**
- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc >` **const\_reverse\_iterator**
- typedef `Node` **node**
- typedef `Node` **node**
- typedef `bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc >` **node\_const\_iterator**

type_traits::const_reference, false, _Alloc >` **reverse\_iterator**
- typedef `const_reverse_iterator` **reverse\_iterator**

### 5.246.1 Detailed Description

```
template<typename Key, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr, class _Cmp_Fn, type-
name _Alloc > class Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >
```

Specialization.

### 5.246.2 Member Typedef Documentation

#### node\_const\_iterator [1/2]

```
typedef bin_search_tree_const_node_it< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::K
Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

#### node\_const\_iterator [2/2]

```
template<typename Key, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr, class _Cmp_Fn,
typename _Alloc > class Node_Update, class Node, typename _Alloc>
typedef bin_search_tree_const_node_it< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::K
Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

The documentation for this struct was generated from the following file:

- [bin\\_search\\_tree\\_/traits.hpp](#)

## 5.247 \_\_gnu\_cxx::binary\_compose< \_Operation1, \_Operation2, \_Operation3 > Class Template Reference

```
#include <functional>
```

Inheritance diagram for \_\_gnu\_cxx::binary\_compose< \_Operation1, \_Operation2, \_Operation3 >:

### Public Types

- `_Operation3` **`_M_fn3`**

#### 5.247.1 Detailed Description

```
template<class _Operation1, class _Operation2, class _Operation3>
class __gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >
```

An [SGI extension](#) .

#### 5.247.2 Member Typedef Documentation

##### `argument_type`

```
typedef _Operation2::argument_type std::unary\_function< _Operation2::argument_type, _Operation1↵
::result_type >::argument_type [inherited]
argument_type is the type of the argument
```

##### `result_type`

```
typedef _Operation1::result_type std::unary\_function< _Operation2::argument_type, _Operation1↵
::result_type >::result_type [inherited]
result_type is the return type
```

The documentation for this class was generated from the following file:

- [ext/functional](#)

## 5.248 `std::binary_function< _Arg1, _Arg2, _Result >` Struct Template Reference

```
#include <stl_function.h>
```

Inheritance diagram for `std::binary_function<_Arg1, _Arg2, _Result>`:

### Public Types

- typedef `_Arg1` [first\\_argument\\_type](#)
- typedef `_Result` [result\\_type](#)
- typedef `_Arg2` [second\\_argument\\_type](#)

### 5.248.1 Detailed Description

```
template<typename _Arg1, typename _Arg2, typename _Result>
struct std::binary_function< _Arg1, _Arg2, _Result >
```

Helper for defining adaptable binary function objects.

**Deprecated** Deprecated in C++11, no longer in the standard since C++17.

### 5.248.2 Member Typedef Documentation

#### `first_argument_type`

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg1 std::binary_function< _Arg1, _Arg2, _Result >::first_argument_type
first_argument_type is the type of the first argument
```

#### `result_type`

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Result std::binary_function< _Arg1, _Arg2, _Result >::result_type
result_type is the return type
```

#### `second_argument_type`

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result >::second_argument_type
second_argument_type is the type of the second argument
```

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.249 `__gnu_pbds::detail::binary_heap< Value_Type, Cmp_Fn, _Alloc >` Class Template Reference

#### 5.250.1 Detailed Description

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
class __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >
```

Const point-type iterator.

#### 5.250.2 Member Typedef Documentation

##### **const\_pointer**

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base\_type::const\_pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::const_pointer
Iterator's const pointer type.
```

##### **const\_reference**

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base\_type::const\_reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::const_reference
Iterator's const reference type.
```

##### **difference\_type**

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef _Alloc::difference_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::difference_type
Difference type.
```

### iterator\_category

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef std::forward_iterator_tag __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,  
Entry, Simple, _Alloc >::iterator_category  
Category.
```

### pointer

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,  
Simple, _Alloc >::pointer  
Iterator's pointer type.
```

### reference

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,  
Simple, _Alloc >::reference  
Iterator's reference type.
```

### value\_type

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::value_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,  
Simple, _Alloc >::value_type  
Iterator's value type.
```

## 5.250.3 Constructor & Destructor Documentation

### `binary_heap_const_iterator_()` [1/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_↵  
heap_const_iterator_ () [inline]  
Default constructor.
```

### `binary_heap_const_iterator_()` [2/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_↵  
heap_const_iterator_ (  
    const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)  
[inline]  
Copy constructor.
```

## 5.250.4 Member Function Documentation

### `operator"!="()` [1/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
bool __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator!=  
(  
    const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)  
const [inline]  
Compares content (negatively) to a different iterator object.
```

**operator!=()** [2/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator!= (
    const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
```

const [inline], [inherited]

Compares content (negatively) to a different iterator object.

**operator\*()**

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple,
_Alloc >::operator* () const [inline], [inherited]
```

Access.

**operator->()**

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, ↵
_Alloc >::operator-> () const [inline], [inherited]
```

Access.

**operator==(** [1/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
bool __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator==
(
    const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
const [inline]
```

Compares content to a different iterator object.

**operator==(** [2/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator== (
    const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
const [inline], [inherited]
```

Compares content to a different iterator object.

### 5.251.1 Detailed Description

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
class __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >
```

Const point-type iterator.

### 5.251.2 Member Typedef Documentation

#### const\_pointer

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef rebind\_traits<_Alloc,value_type>::const_pointer \_\_gnu\_pbds::detail::binary\_heap\_point\_const\_iterator\_<
Value_Type, Entry, Simple, _Alloc >::const_pointer
Iterator's const pointer type.
```

#### const\_reference

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef rebind\_traits<_Alloc,value_type>::const_reference \_\_gnu\_pbds::detail::binary\_heap\_point\_const\_iterator\_<
Value_Type, Entry, Simple, _Alloc >::const_reference
Iterator's const reference type.
```

#### difference\_type

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef trivial\_iterator\_difference\_type \_\_gnu\_pbds::detail::binary\_heap\_point\_const\_iterator\_<
Value_Type, Entry, Simple, _Alloc >::difference_type
Difference type.
```

#### iterator\_category

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef trivial\_iterator\_tag \_\_gnu\_pbds::detail::binary\_heap\_point\_const\_iterator\_< Value_Type,
Entry, Simple, _Alloc >::iterator_category
Category.
```

#### pointer

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef rebind\_traits<_Alloc,value_type>::pointer \_\_gnu\_pbds::detail::binary\_heap\_point\_const\_iterator\_<
Value_Type, Entry, Simple, _Alloc >::pointer
Iterator's pointer type.
```

#### reference

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef rebind\_traits<_Alloc,value_type>::reference \_\_gnu\_pbds::detail::binary\_heap\_point\_const\_iterator\_<
Value_Type, Entry, Simple, _Alloc >::reference
Iterator's reference type.
```

#### value\_type

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef Value_Type \_\_gnu\_pbds::detail::binary\_heap\_point\_const\_iterator\_< Value_Type, Entry,
Simple, _Alloc >::value_type
Iterator's value type.
```

### 5.251.3 Constructor & Destructor Documentation

#### `binary_heap_point_const_iterator_()` [1/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::binary_heap_point_const_iterator_ () [inline]
```

Default constructor.

#### `binary_heap_point_const_iterator_()` [2/2]

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::binary_heap_point_const_iterator_ (
    const __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
[inline]
```

Copy constructor.

### 5.251.4 Member Function Documentation

#### `operator"!="()`

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator!= (
    const __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
const [inline]
```

Compares content (negatively) to a different iterator object.

#### `operator*()`

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple,
_Alloc >::operator* () const [inline]
```

Access.

#### `operator->()`

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, ↵
_Alloc >::operator-> () const [inline]
```

Access.

#### `operator==()`

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator== (
    const __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
const [inline]
```

Compares content to a different iterator object.

The documentation for this class was generated from the following file:

std::basic\_istream< \_CharT, \_Traits > & operator>> (std::basic\_istream< \_CharT, \_Traits > &\_\_is, std::binomial\_distribution< \_IntType1 > &\_\_x)

### 5.256.1 Detailed Description

template<typename \_IntType = int>  
class std::binomial\_distribution< \_IntType >

A discrete binomial random number distribution.

The formula for the binomial probability density function is  $p(i|t, p) = \binom{t}{i} p^i (1-p)^{t-i}$  where  $t$  and  $p$  are the parameters of the distribution.

Since

C++11

### 5.256.2 Member Typedef Documentation

#### result\_type

```
template<typename _IntType = int>
typedef _IntType std::binomial_distribution< _IntType >::result_type
```

The type of the range of the distribution.

### 5.256.3 Member Function Documentation

#### max()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::max () const [inline]
```

Returns the least upper bound value of the distribution.

#### min()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

#### operator>() [1/2]

```
template<typename _IntType = int>
template<typename _UniformRandomNumberGenerator>
result_type std::binomial_distribution< _IntType >::operator() (
    _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Referenced by operator()().

#### operator>() [2/2]

```
template<typename _IntType>
template<typename _UniformRandomNumberGenerator>
```

```

binomial_distribution< _IntType >::result_type std::binomial_distribution< _IntType >::operator()
(
    _UniformRandomNumberGenerator & __urng,
    const param_type & __param)

```

A rejection algorithm when  $t * p \geq 8$  and a simple waiting time method - the second in the referenced book - otherwise. NB: The former is available only if `_GLIBCXX_USE_C99_MATH_FUNCS` is defined.

Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).

References `std::abs()`, `std::numeric_limits< _Tp >::epsilon()`, `std::log()`, and `std::numeric_limits< _Tp >::max()`.

## p()

```

template<typename _IntType = int>
double std::binomial_distribution< _IntType >::p () const [inline]

```

Returns the distribution p parameter.

## param() [1/2]

```

template<typename _IntType = int>
param_type std::binomial_distribution< _IntType >::param () const [inline]

```

Returns the parameter set of the distribution.

## param() [2/2]

```

template<typename _IntType = int>
void std::binomial_distribution< _IntType >::param (
    const param_type & __param) [inline]

```

Sets the parameter set of the distribution.

## Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

## reset()

```

template<typename _IntType = int>
void std::binomial_distribution< _IntType >::reset () [inline]

```

Resets the distribution state.

## t()

```

template<typename _IntType = int>
_IntType std::binomial_distribution< _IntType >::t () const [inline]

```

Returns the distribution t parameter.

## 5.256.4 Friends And Related Symbol Documentation

### operator<<

```

template<typename _IntType = int>
template<typename _IntType1, typename _CharT, typename _Traits>
std::basic_ostream< _CharT, _Traits > & operator<< (
    std::basic_ostream< _CharT, _Traits > & __os,
    const std::binomial_distribution< _IntType1 > & __x) [friend]

```

Inserts a `binomial_distribution` random number distribution `__x` into the output stream `__os`.

## Parameters

<code>__os</code>	An output stream.
<code>__x</code>	A <code>binomial_distribution</code> random number distribution.

## Returns

The output stream with the state of `__x` inserted or in an error state.

**operator==**

```
template<typename _IntType = int>
bool operator== (
    const binomial\_distribution< _IntType > & __d1,
    const binomial\_distribution< _IntType > & __d2) [friend]
```

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

**operator>>**

```
template<typename _IntType = int>
template<typename _IntType1, typename _CharT, typename _Traits>
std::basic\_istream< _CharT, _Traits > & operator>> (
    std::basic\_istream< _CharT, _Traits > & __is,
    std::binomial\_distribution< _IntType1 > & __x) [friend]
```

Extracts a `binomial_distribution` random number distribution `__x` from the input stream `__is`.

## Parameters

<code>__is</code>	An input stream.
<code>__x</code>	A <code>binomial_distribution</code> random number generator engine.

## Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

### 5.260.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::bitmap_allocator< _Tp >
```

Bitmap Allocator, primary template.

### 5.260.2 Member Function Documentation

#### **\_M\_allocate\_single\_object()**

```
template<typename _Tp>
pointer __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object () [inline]
Allocates memory for a single object of size sizeof(_Tp).
```

#### Exceptions

<i>std::bad_alloc.</i>	If memory cannot be allocated.
------------------------	--------------------------------

Complexity: Worst case complexity is  $O(N)$ , but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of  $O(1)$ ! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

**\_M\_deallocate\_single\_object()**

```
template<typename _Tp>
void __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object (
    pointer __p) throw ( ) [inline]
```

Deallocates memory that belongs to a single object of size sizeof(\_Tp).

Complexity: O(lg(N)), but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in O(1) time by the deallocate function.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 5.262.1 Detailed Description

**template<size\_t \_Nb>**  
**class std::bitset<\_Nb>**

The `bitset` class represents a *fixed-size* sequence of bits.

(Note that `bitset` does *not* meet the formal requirements of a [container](#). Mainly, it lacks iterators.)

The template argument, `Nb`, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024\*1024").

In the general unoptimized case, storage is allocated in word-sized blocks. Let `B` be the number of bits in a word, then  $(Nb+(B-1))/B$  words will be used for storage. `B - Nb` bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.

If you think of `bitset` as a *simple array of bits*, be aware that your mental picture is reversed: a `bitset` behaves the same way as bits in integers do, with the bit at index 0 in the *least significant / right-hand* position, and the bit at index `Nb-1` in the *most significant / left-hand* position. Thus, unlike other containers, a `bitset`'s index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a') is 0001100001* on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>

using namespace std;

int main()
{
    long    a = 'a';
    bitset<10> b(a);

    cout << "b('a') is " << b << endl;

    ostringstream s;
    s << b;
    string str = s.str();
    cout << "index 3 in the string is " << str[3] << " but\n"
         << "index 3 in the bitset is " << b[3] << endl;
}
```

Also see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext\\_containers.html](https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_containers.html) for a description of extensions.

Most of the actual code isn't contained in `bitset<>` itself, but in the base class `_Base_bitset`. The base class works with whole words, not with individual bits. This allows us to specialize `_Base_bitset` for the important special case where the bitset is only a single word.

Extra confusion can result due to the fact that the storage for `_Base_bitset` is a regular array, and is indexed as such. This is carefully encapsulated.

### 5.262.2 Constructor & Destructor Documentation

#### bitset() [1/5]

```
template<size_t _Nb>
std::bitset<_Nb>::bitset () [inline], [constexpr], [noexcept]
All bits set to zero.
```

#### bitset() [2/5]

```
template<size_t _Nb>
std::bitset<_Nb>::bitset (
    unsigned long long __val) [inline], [constexpr], [noexcept]
Initial bits bitwise-copied from a single word (others set to zero).
```

#### bitset() [3/5]

```
template<size_t _Nb>
template<class _CharT, class _Traits, class _Alloc>
std::bitset<_Nb>::bitset (
    const std::basic_string<_CharT, _Traits, _Alloc> & __s,
    size_t __position = 0) [inline], [explicit], [constexpr]
Use a subset of a string.
```

#### Parameters

<code>__s</code>	A string of 0 and 1 characters.
<code>__position</code>	Index of the first character in <code>__s</code> to use; defaults to zero.

## Exceptions

<i>std::out_of_range</i>	If <code>__position &gt; __s.size()</code> .
<i>std::invalid_argument</i>	If a character appears in the string which is neither 0 nor 1.

**bitset()** [4/5]

```
template<size_t _Nb>
template<class _CharT, class _Traits, class _Alloc>
std::bitset<_Nb>::bitset (
    const std::basic_string<_CharT, _Traits, _Alloc> & __s,
    size_t __position,
    size_t __n) [inline], [constexpr]
```

Use a subset of a string.

## Parameters

<code>__s</code>	A string of 0 and 1 characters.
<code>__position</code>	Index of the first character in <code>__s</code> to use.
<code>__n</code>	The number of characters to copy.

## Exceptions

<i>std::out_of_range</i>	If <code>__position &gt; __s.size()</code> .
<i>std::invalid_argument</i>	If a character appears in the string which is neither 0 nor 1.

**bitset()** [5/5]

```
template<size_t _Nb>
template<typename _CharT, typename = _Require<is_trivially_copyable<_CharT>, is_standard_↵
layout<_CharT>, is_trivially_default_constructible<_CharT>, __not<is_array<_CharT>>>>
std::bitset<_Nb>::bitset (
    const _CharT * __str,
    typename __bitset<_Nb>::__string<_CharT>::size_type __n = __bitset<_Nb>::__↵
string<_CharT>::npos,
    _CharT __zero = _CharT('0'),
    _CharT __one = _CharT('1')) [inline], [explicit], [constexpr]
```

Construct from a character array.

## Parameters

<code>__str</code>	An array of characters <code>__zero</code> and <code>__one</code> .
<code>__n</code>	The number of characters to use.
<code>__zero</code>	The character corresponding to the value 0.
<code>__one</code>	The character corresponding to the value 1.

**Exceptions**

<code>std::invalid_argument</code>	If a character appears in the string which is neither <code>__zero</code> nor <code>__one</code> .
------------------------------------	--

**5.262.3 Member Function Documentation****all()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::all () const [inline], [constexpr], [noexcept]
```

Tests whether all the bits are on.

**Returns**

True if all the bits are set.

**any()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::any () const [inline], [constexpr], [noexcept]
```

Tests whether any of the bits are on.

**Returns**

True if at least one bit is set.

**count()**

```
template<size_t _Nb>
size_t std::bitset<_Nb>::count () const [inline], [constexpr], [noexcept]
```

Returns the number of bits which are set.

**flip() [1/2]**

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::flip () [inline], [constexpr], [noexcept]
```

Toggles every bit to its opposite value.

**flip() [2/2]**

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::flip (
    size_t __position) [inline], [constexpr]
```

Toggles a given bit to its opposite value.

**Parameters**

<code>__position</code>	The index of the bit.
-------------------------	-----------------------

**Exceptions**

<code>std::out_of_range</code>	If <code>pos</code> is bigger the size of the set.
--------------------------------	--

**none()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::none () const [inline], [constexpr], [noexcept]
```

Tests whether any of the bits are on.

**Returns**

True if none of the bits are set.

**operator&=()**

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::operator&= (
    const bitset<_Nb> & __rhs) [inline], [constexpr], [noexcept]
```

Operations on bitsets.

**Parameters**

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

**operator<<()**

```
template<size_t _Nb>
bitset<_Nb> > std::bitset<_Nb>::operator<< (
    size_t __position) const [inline], [constexpr], [noexcept]
```

Self-explanatory.

**operator<<=()**

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::operator<<= (
    size_t __position) [inline], [constexpr], [noexcept]
```

Operations on bitsets.

**Parameters**

<code>__position</code>	The number of places to shift.
-------------------------	--------------------------------

These should be self-explanatory.

**operator==()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::operator== (
    const bitset<_Nb> & __rhs) const [inline], [constexpr], [noexcept]
```

These comparisons for equality/inequality are, well, *bitwise*.

**operator>>()**

```
template<size_t _Nb>
bitset<_Nb> > std::bitset<_Nb>::operator>> (
    size_t __position) const [inline], [constexpr], [noexcept]
```

Self-explanatory.

**operator>>=()**

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::operator>>= (
    size_t __position) [inline], [constexpr], [noexcept]
```

Operations on bitsets.

**Parameters**

<code>__position</code>	The number of places to shift.
-------------------------	--------------------------------

These should be self-explanatory.

**operator[]() [1/2]**

```
template<size_t _Nb>
reference std::bitset<_Nb>::operator[] (
    size_t __position) [inline], [constexpr]
```

Array-indexing support.

**Parameters**

<code>__position</code>	Index into the bitset.
-------------------------	------------------------

**Returns**

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

**Note**

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

**operator[]() [2/2]**

```
template<size_t _Nb>
bool std::bitset<_Nb>::operator[] (
    size_t __position) const [inline], [constexpr]
```

Array-indexing support.

**Parameters**

<code>__position</code>	Index into the bitset.
-------------------------	------------------------

**Returns**

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

**Note**

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

**operator^=()**

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::operator^= (
    const bitset< _Nb > & __rhs) [inline], [constexpr], [noexcept]
```

Operations on bitsets.

**Parameters**

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

**operator" |=()**

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::operator|= (
    const bitset< _Nb > & __rhs) [inline], [constexpr], [noexcept]
```

Operations on bitsets.

**Parameters**

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

**operator~()**

```
template<size_t _Nb>
bitset< _Nb > std::bitset< _Nb >::operator~ () const [inline], [constexpr], [noexcept]
```

See the no-argument flip().

**reset() [1/2]**

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::reset () [inline], [constexpr], [noexcept]
```

Sets every bit to false.

**reset() [2/2]**

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::reset (
    size_t __position) [inline], [constexpr]
```

Sets a given bit to false.

**Parameters**

<code>__position</code>	The index of the bit.
-------------------------	-----------------------

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

Same as writing `set (pos, false)`.

**set()** [1/2]

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::set () [inline], [constexpr], [noexcept]
```

Sets every bit to true.

**set()** [2/2]

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::set (
    size_t __position,
    bool __val = true) [inline], [constexpr]
```

Sets a given bit to a particular value.

**Parameters**

<code>__position</code>	The index of the bit.
<code>__val</code>	Either true or false, defaults to true.

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

**size()**

```
template<size_t _Nb>
size_t std::bitset<_Nb>::size () const [inline], [constexpr], [noexcept]
```

Returns the total number of bits.

**test()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::test (
    size_t __position) const [inline], [constexpr]
```

Tests the value of a bit.

**Parameters**

<code>__position</code>	The index of a bit.
-------------------------	---------------------

**Returns**

The value at *pos*.

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

### to\_string()

```
template<size_t _Nb>
template<class _CharT, class _Traits, class _Alloc>
std::basic_string< _CharT, _Traits, _Alloc > std::bitset< _Nb >::to_string () const [inline],
[constexpr]
```

Returns a character interpretation of the bitset.

#### Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

### to\_ulong()

```
template<size_t _Nb>
unsigned long std::bitset< _Nb >::to_ulong () const [inline], [constexpr]
```

Returns a numerical interpretation of the bitset.

#### Returns

The integral equivalent of the bits.

#### Exceptions

<code>std::overflow_error</code>	If there are too many bits to be represented in an unsigned long.
----------------------------------	---

### 5.263.1 Detailed Description

[bool\\_set](#)

See N2136, [Bool\\_set](#): multi-valued logic by Hervé Brönnimann, Guillaume Melquiond, Sylvain Pion.

The implicit conversion to bool is slippery! I may use the new explicit conversion. This has been specialized in the language so that in contexts requiring a bool the conversion happens implicitly. Thus most objections should be eliminated.

### 5.263.2 Constructor & Destructor Documentation

#### [bool\\_set\(\)](#) [1/2]

```
std::tr2::bool_set::bool_set () [inline], [constexpr]
```

Default constructor.

#### [bool\\_set\(\)](#) [2/2]

```
std::tr2::bool_set::bool_set (
    bool __t) [inline], [constexpr]
```

Constructor from bool.

### 5.263.3 Member Function Documentation

#### [equals\(\)](#)

```
bool std::tr2::bool_set::equals (
    bool_set __b) const [inline]
```

Return true if states are equal.

#### [is\\_emptyset\(\)](#)

```
bool std::tr2::bool_set::is_emptyset () const [inline]
```

Return true if this is empty.

#### [is\\_indeterminate\(\)](#)

```
bool std::tr2::bool_set::is_indeterminate () const [inline]
```

Return true if this is indeterminate.

#### [is\\_singleton\(\)](#)

```
bool std::tr2::bool_set::is_singleton () const [inline]
```

Return true if this is false or true (normal boolean).

## operator bool()

```
std::tr2::bool_set::operator bool () const [inline]
```

Conversion to bool.

The documentation for this class was generated from the following files:

- [bool\\_set](#)
- [bool\\_set.tcc](#)

### 5.266.1 Detailed Description

```
template<typename _RealType = double>
class std::cauchy_distribution< _RealType >
```

A cauchy\_distribution random number distribution.

The formula for the normal probability mass function is  $p(x|a,b) = (\pi b(1 + (\frac{x-a}{b})^2))^{-1}$

Since

C++11

### 5.266.2 Member Typedef Documentation

#### result\_type

```
template<typename _RealType = double>
typedef _RealType std::cauchy_distribution< _RealType >::result_type
```

The type of the range of the distribution.

### 5.266.3 Member Function Documentation

#### max()

```
template<typename _RealType = double>
result_type std::cauchy_distribution< _RealType >::max () const [inline]
```

Returns the least upper bound value of the distribution.

#### min()

```
template<typename _RealType = double>
result_type std::cauchy_distribution< _RealType >::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

#### operator>()()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator>
result_type std::cauchy_distribution< _RealType >::operator() (
    _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Referenced by [operator\(\)\(\)](#).

#### param() [1/2]

```
template<typename _RealType = double>
param_type std::cauchy_distribution< _RealType >::param () const [inline]
```

Returns the parameter set of the distribution.

Referenced by [std::operator>>\(\)](#).

#### param() [2/2]

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::param (
    const param_type & __param) [inline]
```

Sets the parameter set of the distribution.

#### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

#### reset()

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::reset () [inline]
Resets the distribution state.
```

### 5.266.4 Friends And Related Symbol Documentation

#### operator==

```
template<typename _RealType = double>
bool operator== (
    const cauchy_distribution< _RealType > & __d1,
    const cauchy_distribution< _RealType > & __d2) [friend]
```

Return true if two Cauchy distributions have the same parameters.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

### 5.267 `__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >` Class Template Reference

- void `notify_resized` (size\_type new\_size)

### 5.267.1 Detailed Description

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
```

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.

### 5.267.2 Member Enumeration Documentation

#### anonymous enum

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
anonymous enum
```

#### Enumerator

<code>external_load_access</code>	Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.
-----------------------------------	---

### 5.267.3 Constructor & Destructor Documentation

#### `cc_hash_max_collision_check_resize_trigger()`

```
template<bool External_Load_Access, typename Size_Type>
__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::cc_↵
hash_max_collision_check_resize_trigger (
    float load = 0.5)
```

Default constructor, or constructor taking load, a `__load` factor which it will attempt to maintain.

### 5.267.4 Member Function Documentation

#### `get_load()`

```
template<bool External_Load_Access, typename Size_Type>
float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::get_load () const [inline]
```

Returns the current load.

#### `is_grow_needed()`

```
template<bool External_Load_Access, typename Size_Type>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::is_grow_needed (
    size_type size,
    size_type num_entries) const [inline], [protected]
```

Queries whether a grow is needed. This method is called only if this object indicated is needed.

**is\_resize\_needed()**

```
template<bool External_Load_Access, typename Size_Type>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::is_resize_needed () const [inline], [protected]
```

Queries whether a resize is needed.

**notify\_cleared()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_cleared () [protected]
```

Notifies the table was cleared.

References [notify\\_resized\(\)](#).

**notify\_erase\_search\_collision()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erase_search_collision () [inline], [protected]
```

Notifies a search encountered a collision.

**notify\_erase\_search\_end()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erase_search_end () [inline], [protected]
```

Notifies a search ended.

**notify\_erase\_search\_start()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erase_search_start () [inline], [protected]
```

Notifies an erase search started.

**notify\_erased()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erased (
    size_type num_entries) [inline], [protected]
```

Notifies an element was erased.

**notify\_externally\_resized()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_externally_resized (
    size_type new_size) [protected]
```

Notifies the table was resized externally.

### **notify\_find\_search\_collision()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_collision () [inline], [protected]
```

Notifies a search encountered a collision.

### **notify\_find\_search\_end()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_end () [inline], [protected]
```

Notifies a search ended.

### **notify\_find\_search\_start()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_start () [inline], [protected]
```

Notifies a find search started.

### **notify\_insert\_search\_collision()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_collision () [inline], [protected]
```

Notifies a search encountered a collision.

### **notify\_insert\_search\_end()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_end () [inline], [protected]
```

Notifies a search ended.

### **notify\_insert\_search\_start()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_start () [inline], [protected]
```

Notifies an insert search started.

### **notify\_inserted()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_inserted (
    size_type num_entries) [inline], [protected]
```

Notifies an element was inserted.

### **notify\_resized()**

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_resized (
    size_type new_size) [protected]
```

Notifies the table was resized as a result of this object's signifying that a resize is needed.  
Referenced by [notify\\_cleared\(\)](#).

### set\_load()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::set_load (
    float load)
```

Sets the load; does not resize the container.

The documentation for this class was generated from the following file:

- [hash\\_policy.hpp](#)

## 5.268 \_\_gnu\_pbds::cc\_hash\_table< Key, Mapped, Hash\_Fn, Eq\_Fn, Comb\_Hash\_Fn, Resize\_Policy, Store\_Hash, \_Alloc > Class Template Reference

### 5.268.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type,
typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>>
class __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >
```

A collision-chaining hash-based associative container.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor.
<i>Eq_Fn</i>	Equal functor.
<i>Comb_Hash_Fn</i>	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.)
<i>Resize_Policy</i>	Resizes hash.
<i>Store_Hash</i>	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
<i>_Alloc</i>	Allocator type.

Base tag choices are: `cc_hash_tag`.

Base is `basic_hash_table`.

### 5.268.2 Constructor & Destructor Documentation

#### `cc_hash_table()` [1/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type,
typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>>
```

```
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table () [inline]
```

Default constructor.

**cc\_hash\_table()** [2/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `Hash_Fn` object of the container object.

**cc\_hash\_table()** [3/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h,
    const eq_fn & e) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, and `r_eq_fn` will be copied by the `eq_fn` object of the container object.

**cc\_hash\_table()** [4/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, and `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object.

**cc\_hash\_table()** [5/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch,
    const resize_policy & rp) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object, and `r_resize_policy` will be copied by the `resize_policy` object of the container object.

#### `cc_hash_table()` [6/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type,
bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
template<typename It>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last) [inline]
```

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

#### `cc_hash_table()` [7/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type,
bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
template<typename It>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h) [inline]
```

Constructor taking `__iterators` to a range of `value_types` and some policy objects. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

#### `cc_hash_table()` [8/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type,
bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
template<typename It>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e) [inline]
```

Constructor taking `__iterators` to a range of `value_types` and some policy objects. The `value_types` between `first_it` and `last_it` will be inserted into the container object. `r_hash_fn` will be copied by the `hash_fn` object of the container object, and `r_eq_fn` will be copied by the `eq_fn` object of the container object.

**cc\_hash\_table()** [9/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>>
template<typename It>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch) [inline]
```

Constructor taking \_\_iterators to a range of value\_types and some policy objects The value\_types between first\_↵ it and last\_it will be inserted into the container object. r\_hash\_fn will be copied by the hash\_fn object of the container object, r\_eq\_fn will be copied by the eq\_fn object of the container object, and r\_comb\_hash\_fn will be copied by the comb\_hash\_fn object of the container object.

**cc\_hash\_table()** [10/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>>
template<typename It>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch,
    const resize_policy & rp) [inline]
```

Constructor taking \_\_iterators to a range of value\_types and some policy objects The value\_types between first\_it and last\_it will be inserted into the container object. r\_hash\_fn will be copied by the hash\_fn object of the container object, r\_eq\_fn will be copied by the eq\_fn object of the container object, r\_comb\_hash\_fn will be copied by the comb\_hash\_fn object of the container object, and r\_resize\_policy will be copied by the resize\_policy object of the container object.

### 5.270.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn,
Resize_Policy >
```

A collision-chaining hash-based container.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor. Default is <code>__gnu_cxx::hash</code> .
<i>Eq_Fn</i>	Equal functor. Default <code>std::equal_to&lt;Key&gt;</code>
<i>_Alloc</i>	Allocator type.
<i>Store_Hash</i>	If key type stores extra metadata. Defaults to false.
<i>Comb_Hash_Fn</i>	Combining hash functor. If <i>Hash_Fn</i> is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) Default <code>direct_mask_range_hashing</code> .
<i>Resize_Policy</i>	Resizes hash. Defaults to <code>hash_standard_resize_policy</code> , using <code>hash_exponential_size_policy</code> and <code>hash_load_check_resize_trigger</code> .

Bases are: `detail::hash_eq_fn`, `Resize_Policy`, `detail::ranged_hash_fn`, `detail::types_traits`. (Optional: `detail::debug_map_base`.)

### 5.270.2 Member Enumeration Documentation

#### anonymous enum

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
```

anonymous enum

Value stores hash, true or false.

### 5.270.3 Member Function Documentation

#### empty()

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_
Fn, Resize_Policy >::empty () const [inline], [nodiscard]
True if size() == 0.
```

#### get\_comb\_hash\_fn() [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ()
Return current comb_hash_fn.
```

### `get_comb_hash_fn()` [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_↵
Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn () const
Return current const comb_hash_fn.
```

### `get_eq_fn()` [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_↵
Hash_Fn, Resize_Policy >::get_eq_fn ()
Return current eq_fn.
```

### `get_eq_fn()` [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_eq_fn () const
Return current const eq_fn.
```

### `get_hash_fn()` [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_↵
Hash_Fn, Resize_Policy >::get_hash_fn ()
Return current hash_fn.
```

### `get_hash_fn()` [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_hash_fn () const
Return current const hash_fn.
```

### `get_resize_policy()` [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_resize_policy ()
Return current resize_policy.
```

### `get_resize_policy()` [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_↵
Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy () const
Return current const resize_policy.
```

The documentation for this class was generated from the following file:

- [cc\\_ht\\_map.hpp](#)

## 5.271 `__gnu_cxx::char_traits<_CharT>` Struct Template Reference

```
#include <char_traits.h>
```

Inheritance diagram for `__gnu_cxx::char_traits<_CharT>`:

### Public Types

- typedef `_CharT` **char\_type**
- using **comparison\_category**
- typedef `_Char_types<_CharT>::int_type` **int\_type**
- typedef `_Char_types<_CharT>::off_type` **off\_type**
- typedef `_Char_types<_CharT>::pos_type` **pos\_type**
- typedef `_Char_types<_CharT>::state_type` **state\_type**

### Static Public Member Functions

- static constexpr bool **eq\_int\_type** (const int\_type &\_\_c1, const int\_type &\_\_c2)
- static constexpr const char\_type \* **find** (const char\_type \*\_\_s, std::size\_t \_\_n, const char\_type &\_\_a)
- static constexpr std::size\_t **length** (const char\_type \*\_\_s)
- static constexpr bool **lt** (const char\_type &\_\_c1, const char\_type &\_\_c2)
- static constexpr char\_type \* **move** (char\_type \*\_\_s1, const char\_type \*\_\_s2, std::size\_t \_\_n)
- static constexpr int\_type **not\_eof** (const int\_type &\_\_c)
- static constexpr char\_type **to\_char\_type** (const int\_type &\_\_c)
- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

### 5.271.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::char_traits<_CharT>
```

Base class used to implement std::char\_traits.

#### Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the `int_type` and `state_type` typedefs, and the `eof()` member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace `std` may not be specialized for fundamental types, but classes in namespace `__gnu_cxx` may be.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character\\_types](https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types) for advice on how to make use of this class for *unusual* character types. Also, check out `include/ext/pod_char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 5.272 std::char\_traits<\_CharT> Struct Template Reference

```
#include <char_traits.h>
```

Inheritance diagram for std::char\_traits<\_CharT>:

### Public Types

- typedef `_CharT` **char\_type**
- using **comparison\_category**
- typedef `_Char_types<_CharT>::int_type` **int\_type**
- typedef `_Char_types<_CharT>::off_type` **off\_type**
- typedef `_Char_types<_CharT>::pos_type` **pos\_type**
- typedef `_Char_types<_CharT>::state_type` **state\_type**

## Static Public Member Functions

- static constexpr void **assign** (char\_type &\_\_c1, const char\_type &\_\_c2)
- static constexpr char\_type \* **assign** (char\_type \* \_\_s, std::size\_t \_\_n, char\_type \_\_a)
- static constexpr int **compare** (const char\_type \* \_\_s1, const char\_type \* \_\_s2, std::size\_t \_\_n)
- static constexpr char\_type \* **copy** (char\_type \* \_\_s1, const char\_type \* \_\_s2, std::size\_t \_\_n)
- static constexpr int\_type **eof** ()
- static constexpr bool **eq** (const char\_type &\_\_c1, const char\_type &\_\_c2)
- static constexpr bool **eq\_int\_type** (const int\_type &\_\_c1, const int\_type &\_\_c2)
- static constexpr const char\_type \* **find** (const char\_type \* \_\_s, std::size\_t \_\_n, const char\_type &\_\_a)
- static constexpr std::size\_t **length** (const char\_type \* \_\_s)
- static constexpr bool **lt** (const char\_type &\_\_c1, const char\_type &\_\_c2)
- static constexpr char\_type \* **move** (char\_type \* \_\_s1, const char\_type \* \_\_s2, std::size\_t \_\_n)
- static constexpr int\_type **not\_eof** (const int\_type &\_\_c)
- static constexpr char\_type **to\_char\_type** (const int\_type &\_\_c)
- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

### 5.272.1 Detailed Description

```
template<typename _CharT>
struct std::char_traits< _CharT >
```

Basis for explicit traits specializations.

#### Note

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around `__gnu_cxx::char_traits`, it is possible to achieve a more appropriate definition by specializing `__gnu_cxx::char_traits`.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character\\_types](https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types) for advice on how to make use of this class for *unusual* character types. Also, check out `include/ext/pod_char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

### 5.276.1 Detailed Description

```
template<typename _RealType = double>
class std::chi_squared_distribution< _RealType >
```

A `chi_squared_distribution` random number distribution.

The formula for the normal probability mass function is  $p(x|n) = \frac{x^{(n/2)-1}e^{-x/2}}{\Gamma(n/2)2^{n/2}}$

Since

C++11

### 5.276.2 Member Typedef Documentation

#### result\_type

```
template<typename _RealType = double>
typedef _RealType std::chi_squared_distribution< _RealType >::result_type
```

The type of the range of the distribution.

### 5.276.3 Member Function Documentation

#### max()

```
template<typename _RealType = double>
result_type std::chi_squared_distribution< _RealType >::max () const [inline]
```

Returns the least upper bound value of the distribution.

#### min()

```
template<typename _RealType = double>
result_type std::chi_squared_distribution< _RealType >::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

#### operator>()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator>
result_type std::chi_squared_distribution< _RealType >::operator() (
    _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

#### param() [1/2]

```
template<typename _RealType = double>
param_type std::chi_squared_distribution< _RealType >::param () const [inline]
```

Returns the parameter set of the distribution.

#### param() [2/2]

```
template<typename _RealType = double>
void std::chi_squared_distribution< _RealType >::param (
    const param_type & __param) [inline]
```

Sets the parameter set of the distribution.

#### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

**reset()**

```
template<typename _RealType = double>
void std::chi_squared_distribution<_RealType>::reset () [inline]
Resets the distribution state.
```

**5.276.4 Friends And Related Symbol Documentation****operator<<**

```
template<typename _RealType = double>
template<typename _RealType1, typename _CharT, typename _Traits>
std::basic_ostream<_CharT, _Traits> & operator<< (
    std::basic_ostream<_CharT, _Traits> & __os,
    const std::chi_squared_distribution<_RealType1> & __x) [friend]
Inserts a chi_squared_distribution random number distribution __x into the output stream __os.
```

**Parameters**

<code>__os</code>	An output stream.
<code>__x</code>	A <code>chi_squared_distribution</code> random number distribution.

**Returns**

The output stream with the state of `__x` inserted or in an error state.

**operator==**

```
template<typename _RealType = double>
bool operator== (
    const chi_squared_distribution<_RealType> & __d1,
    const chi_squared_distribution<_RealType> & __d2) [friend]
```

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

**operator>>**

```
template<typename _RealType = double>
template<typename _RealType1, typename _CharT, typename _Traits>
std::basic_istream<_CharT, _Traits> & operator>> (
    std::basic_istream<_CharT, _Traits> & __is,
    std::chi_squared_distribution<_RealType1> & __x) [friend]
Extracts a chi_squared_distribution random number distribution __x from the input stream __is.
```

**Parameters**

<code>__is</code>	An input stream.
<code>__x</code>	A <code>chi_squared_distribution</code> random number generator engine.

**Returns**

The input stream with `__x` extracted or in an error state.

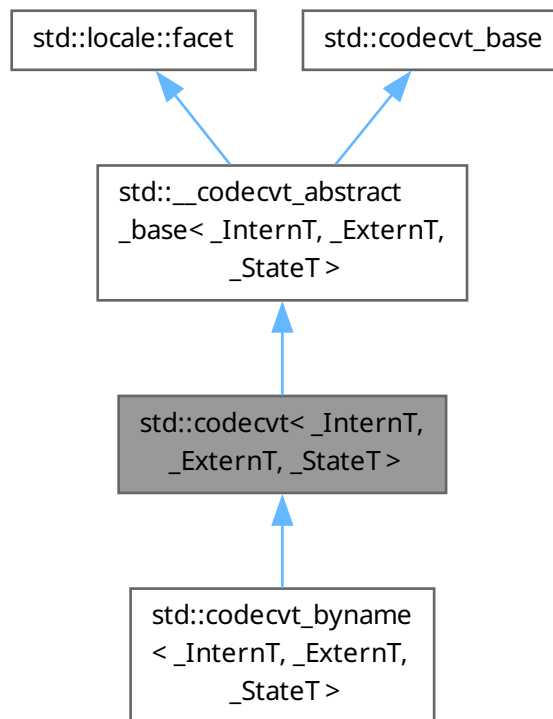

The documentation for this class was generated from the following files:

#### 5.277.1 Detailed Description

```
template<typename _InternT, typename _ExternT, typename _StateT>
class std::codecvt<_InternT, _ExternT, _StateT >
```

Primary class template codecvt.

NB: Generic, mostly useless implementation.

#### 5.277.2 Member Function Documentation

##### do\_always\_noconv()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual bool std::codecvt<\_InternT, \_ExternT, \_StateT >::do\_always\_noconv () const throw ( )
[protected], [virtual]
Implements std::\_\_codecvt\_abstract\_base<\_InternT, \_ExternT, \_StateT >.
```

**do\_encoding()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual int std::codecvt< \_InternT, \_ExternT, \_StateT >::do\_encoding () const throw ( )    [protected],
[virtual]
Implements std::\_\_codecvt\_abstract\_base< \_InternT, \_ExternT, \_StateT >.
```

**do\_in()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt< \_InternT, \_ExternT, \_StateT >::do\_in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next) const [protected], [virtual]
Implements std::\_\_codecvt\_abstract\_base< \_InternT, \_ExternT, \_StateT >.
```

**do\_length()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual int std::codecvt< \_InternT, \_ExternT, \_StateT >::do\_length (
    state_type & ,
    const extern_type * __from,
    const extern_type * __end,
    size_t __max) const [protected], [virtual]
Implements std::\_\_codecvt\_abstract\_base< \_InternT, \_ExternT, \_StateT >.
```

**do\_max\_length()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual int std::codecvt< \_InternT, \_ExternT, \_StateT >::do\_max\_length () const throw ( )    [protected],
[virtual]
Implements std::\_\_codecvt\_abstract\_base< \_InternT, \_ExternT, \_StateT >.
```

**do\_out()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt< \_InternT, \_ExternT, \_StateT >::do\_out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

**See also**

[do\\_out](#) for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, \\_StateT >](#).

**do\_unshift()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt<_InternT, _ExternT, _StateT >::do_unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, \\_StateT >](#).

**in()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters**

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

**Returns**

`codecvt_base::result`.

**out()**

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::out (
    state_type & __state,
```

```

const intern_type * __from,
const intern_type * __from_end,
const intern_type *& __from_next,
extern_type * __to,
extern_type * __to_end,
extern_type *& __to_next) const [inline], [inherited]

```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

References [do\\_out\(\)](#).

#### unshift()

```

template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [inline], [inherited]

```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

## Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

## Returns

`codecvt_base::result`.

#### 5.278.1 Detailed Description

template<typename \_InternT, typename \_ExternT>  
class std::codecvt<\_InternT, \_ExternT, encoding\_state >

codecvt<InternT, \_ExternT, encoding\_state> specialization.

#### 5.278.2 Member Function Documentation

##### do\_always\_noconv() [1/2]

```
virtual bool std::codecvt<_InternT, _ExternT, encoding_state >::do_always_noconv () const throw  
( ) [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

##### do\_always\_noconv() [2/2]

```
template<typename _InternT, typename _ExternT>  
bool std::codecvt<_InternT, _ExternT, encoding_state >::do_always_noconv () const throw ( )  
[protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

##### do\_encoding() [1/2]

```
virtual int std::codecvt<_InternT, _ExternT, encoding_state >::do_encoding () const throw ( )  
[protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

##### do\_encoding() [2/2]

```
template<typename _InternT, typename _ExternT>  
int std::codecvt<_InternT, _ExternT, encoding_state >::do_encoding () const throw ( ) [protected],  
[virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_in()** [1/2]

```
virtual result std::codecvt< _InternT, _ExternT, encoding_state >::do_in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type * __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type * __to_next) const [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_in()** [2/2]

```
template<typename _InternT, typename _ExternT>
codecvt_base::result std::codecvt< _InternT, _ExternT, encoding_state >::do_in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type * __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type * __to_next) const [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_length()** [1/2]

```
virtual int std::codecvt< _InternT, _ExternT, encoding_state >::do_length (
    state_type & ,
    const extern_type * __from,
    const extern_type * __end,
    size_t __max) const [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_length()** [2/2]

```
template<typename _InternT, typename _ExternT>
int std::codecvt< _InternT, _ExternT, encoding_state >::do_length (
    state_type & ,
    const extern_type * __from,
    const extern_type * __end,
    size_t __max) const [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_max\_length()** [1/2]

```
virtual int std::codecvt< _InternT, _ExternT, encoding_state >::do_max_length () const throw ( )
[protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_max\_length()** [2/2]

```
template<typename _InternT, typename _ExternT>
int std::codecvt< _InternT, _ExternT, encoding_state >::do_max_length () const throw ( ) [protected],
[virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_out()** [1/2]

```
virtual result std::codecvt<_InternT, _ExternT, encoding_state >::do_out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_out()** [2/2]

```
template<typename _InternT, typename _ExternT>
codecvt_base::result std::codecvt<_InternT, _ExternT, encoding_state >::do_out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_unshift()** [1/2]

```
virtual result std::codecvt<_InternT, _ExternT, encoding_state >::do_unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

**do\_unshift()** [2/2]

```
template<typename _InternT, typename _ExternT>
codecvt_base::result std::codecvt<_InternT, _ExternT, encoding_state >::do_unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]
```

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state >](#).

**in()** [1/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters**

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

**Returns**

`codecvt_base::result`.

**in()** [2/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next) const [inline]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

#### `out()` [1/2]

```
result std::__codecvt_abstract_base<_InternT, _ExternT, encoding_state >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

**Returns**

codecvt\_base::result.

**out() [2/2]**

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [inline]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This is analogous to wcsrtombs. It does this by calling codecvt::do\_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

**Parameters**

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

**Returns**

codecvt\_base::result.

**unshift() [1/2]**

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

#### unshift() [2/2]

```
result std::__codecvt_abstract_base<_InternT, _ExternT, encoding_state >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [inline]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

### 5.279.1 Detailed Description

class `codecvt<char, char, mbstate_t>` specialization.

### 5.279.2 Member Function Documentation

#### `do_always_noconv()` [1/2]

virtual bool `std::codecvt< char, char, mbstate_t >::do_always_noconv () const throw ( )` [protected], [virtual]

Implements `std::__codecvt_abstract_base< char, char, mbstate_t >`.

#### `do_always_noconv()` [2/2]

virtual bool `std::codecvt< char, char, mbstate_t >::do_always_noconv () const throw ( )` [protected], [virtual]

Implements `std::__codecvt_abstract_base< char, char, mbstate_t >`.

#### `do_encoding()` [1/2]

virtual int `std::codecvt< char, char, mbstate_t >::do_encoding () const throw ( )` [protected], [virtual]

Implements `std::__codecvt_abstract_base< char, char, mbstate_t >`.

#### `do_encoding()` [2/2]

virtual int `std::codecvt< char, char, mbstate_t >::do_encoding () const throw ( )` [protected], [virtual]

Implements `std::__codecvt_abstract_base< char, char, mbstate_t >`.

#### `do_in()` [1/2]

virtual result `std::codecvt< char, char, mbstate_t >::do_in (`  
    `state_type & __state,`  
    `const extern_type * __from,`  
    `const extern_type * __from_end,`  
    `const extern_type *& __from_next,`  
    `intern_type * __to,`  
    `intern_type * __to_end,`  
    `intern_type *& __to_next) const` [protected], [virtual]

Implements `std::__codecvt_abstract_base< char, char, mbstate_t >`.

#### `do_in()` [2/2]

virtual result `std::codecvt< char, char, mbstate_t >::do_in (`  
    `state_type & __state,`  
    `const extern_type * __from,`

```

    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next) const [protected], [virtual]

```

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

#### **do\_length()** [1/2]

```

virtual int std::codecvt< char, char, mbstate\_t >::do\_length (
    state_type & ,
    const extern_type * __from,
    const extern_type * __end,
    size_t __max) const [protected], [virtual]

```

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

#### **do\_length()** [2/2]

```

virtual int std::codecvt< char, char, mbstate\_t >::do\_length (
    state_type & ,
    const extern_type * __from,
    const extern_type * __end,
    size_t __max) const [protected], [virtual]

```

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

#### **do\_max\_length()** [1/2]

```

virtual int std::codecvt< char, char, mbstate\_t >::do\_max\_length () const throw () [protected],
[virtual]

```

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

#### **do\_max\_length()** [2/2]

```

virtual int std::codecvt< char, char, mbstate\_t >::do\_max\_length () const throw () [protected],
[virtual]

```

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

#### **do\_out()** [1/2]

```

virtual result std::codecvt< char, char, mbstate\_t >::do\_out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]

```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

See also

`out` for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

**do\_out()** [2/2]

```
virtual result std::codecvt< char, char, mbstate_t >::do_out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

**See also**

[do\\_out\(\)](#) out for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base< char, char, mbstate\\_t >](#).

**do\_unshift()** [1/2]

```
virtual result std::codecvt< char, char, mbstate_t >::do_unshift (
    state_type & __state,
