1.7 Developer Options

This section describes command-line options that are primarily of interest to developers or language tooling.

-fdump-d-original

Output the internal front-end AST after the **semantic3** stage. This option is only useful for debugging the GNU D compiler itself.

-v

Dump information about the compiler language processing stages as the source program is being compiled. This includes listing all modules that are processed through the **parse**, **semantic**, **semantic2**, and **semantic3** stages; all **import** modules and their file paths; and all **function** bodies that are being compiled.
