Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.
Referenced by __gnu_cxx::operator+(), __gnu_cxx::operator+(), __gnu_cxx::operator+(), and __gnu_cxx::__versa_string< char >::shrink

resize() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (
            size_type __n)  [inline]
```

Resizes the string to the specified number of characters.

Parameters

_↩ _*n*	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

resize() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (
            size_type __n,
            _CharT __c)
```

Resizes the string to the specified number of characters.

Parameters

_↩ _*n*	Number of characters the string should contain.
_↩ _*c*	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to __*c*.
References append(), and size().
Referenced by __gnu_cxx::__versa_string< char >::resize().

rfind() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↩
_Traits, _Alloc, _Base >::rfind (
            _CharT __c,
            size_type __pos = npos) const  [noexcept]
```

Find last position of a character.

Parameters

__*c*	Character to locate.
__*pos*	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and size().

rfind() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Referenced by __gnu_cxx::__versa_string< char >::find_last_of(), __gnu_cxx::__versa_string< char >::rfind(), and __gnu_cxx::__versa_string< char >::rfind().

rfind() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↩
_Traits, _Alloc, _Base >::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from __pos, searches backward for the first __n characters in __s within this string. If found, returns the index where it begins. If not found, returns npos.
References std::min(), npos, and size().

rfind() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
            const _CharT * __s,
            size_type __pos = npos) const  [inline]
```

Find last position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from __pos, searches backward for the value of __s within this string. If found, returns the index where it begins. If not found, returns npos.

shrink_to_fit()

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::shrink_to_fit ()  [inline],
[noexcept]
```

A non-binding request to reduce capacity() to size().

size()

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size () const  [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Referenced by __gnu_cxx::__versa_string< char >::append(), __gnu_cxx::__versa_string< char >::append(), __gnu_cxx::__versa_string< char >::assign(), __gnu_cxx::__versa_string< char >::assign(), __gnu_cxx::__versa_string< char >::assig __gnu_cxx::__versa_string< char >::assign(), __gnu_cxx::__versa_string< char >::at(), __gnu_cxx::__versa_string< char >::at(), __gnu_cxx::__versa_string< char >::back(), __gnu_cxx::__versa_string< char >::back(), __gnu_cxx::__versa_string< char >::cend(), compare(), compare(), __gnu_cxx::__versa_string< char >::compare(), __gnu_cxx::__versa_string< char >::empty(), __gnu_cxx::__versa_string< char >::end(), __gnu_cxx::__versa_string< char >::end(), find(), find(), __gnu_cxx::__versa_string< char > find_first_not_of(), find_first_not_of(), __gnu_cxx::__versa_string< char >::find_first_not_of(), find_first_of(), __gnu_cxx::__versa_string< find_last_not_of(), find_last_not_of(), find_last_of(), __gnu_cxx::__versa_string< char >::find_last_of(), __gnu_cxx::__versa_string< cha __gnu_cxx::operator+(), __gnu_cxx::operator+(), __gnu_cxx::operator+(), __gnu_cxx::operator+(), __gnu_cxx::operator+(), __gnu_cxx::operator==(), __gnu_cxx::operator==(), __gnu_cxx::__versa_string< char >::operator[](), __gnu_cxx::__versa_string< char

__gnu_cxx::__versa_string< char >::pop_back(), __gnu_cxx::__versa_string< char >::push_back(), __gnu_cxx::__versa_string< char >
__gnu_cxx::__versa_string< char >::replace(), resize(), rfind(), rfind(), and __gnu_cxx::__versa_string< char >::shrink_to_fit().

substr()

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr (
            size_type __pos = 0,
            size_type __n = npos) const  [inline]
```

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If pos > size().

Construct and return a new string using the *__n* characters starting at *__pos*. If the string is too short, use the remainder of the characters. If *__pos* is beyond the end of the string, out_of_range is thrown.

swap()

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap (
            __versa_string< _CharT, _Traits, _Alloc, _Base > & __s)  [inline], [noexcept]
```

Swap contents with another string.

Parameters

__s	String to swap with.

Exchanges the contents of this string with that of *__s* in constant time.
Referenced by __gnu_cxx::__versa_string< char >::assign(), __gnu_cxx::__versa_string< char >::operator=(), and __gnu_cxx::swap().

6.58.4 Member Data Documentation

npos

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::npos  [static]
```

Value returned by various member functions when they fail.
Referenced by find(), find(), find_first_not_of(), find_first_not_of(), find_first_of(), find_last_not_of(), find_last_not_of(), find_last_of(), rfind(), and rfind().

  static bool **_S_Is** (const _Safe_iterator< _Iterator, _Sequence, _Category > &)
- template<typename _Iterator, typename _Category>
  static bool **_S_Is_Beginnest** (const _Safe_iterator< _Iterator, _Sequence, _Category > &__it)

6.63.1 Detailed Description

template<typename _Sequence>
struct __gnu_debug::_BeforeBeginHelper< _Sequence >

Helper struct to deal with sequence offering a before_begin iterator.
The documentation for this struct was generated from the following file:

- safe_iterator.h

6.64 std::_Bind< _Signature > Class Template Reference

6.64.1 Detailed Description

template<typename _Signature>
class std::_Bind< _Signature >

Type of the function object returned from bind().
The documentation for this class was generated from the following file:

- functional

6.65 std::_Bind_result< _Result, _Signature > Class Template Reference

6.65.1 Detailed Description

template<typename _Result, typename _Signature>
class std::_Bind_result< _Result, _Signature >

Type of the function object returned from bind<R>().
The documentation for this class was generated from the following file:

- functional

6.66 __gnu_cxx::__detail::_Bitmap_counter< _Tp > Class Template Reference

`#include <bitmap_allocator.h>`

Public Member Functions

- **_Bitmap_counter** (_BPVector &Rvbp, long __index=-1)
- pointer **_M_base** () const throw ()
- bool **_M_finished** () const throw ()

- void **_M_make_range** (_CharT __l, _CharT __r)
- void **_M_ready** ()
- bool **operator()** (_CharT __ch) const

6.67.1 Detailed Description

template<typename _TraitsT, bool __icase, bool __collate>
struct std::__detail::_BracketMatcher< _TraitsT, __icase, __collate >

Matches a character range (bracket expression).
The documentation for this struct was generated from the following files:

- regex_compiler.h
- regex_compiler.tcc

6.68 __gnu_cxx::_Caster< _ToType > Struct Template Reference

`#include <cast.h>`

Public Types

- typedef _ToType::element_type * **type**

6.68.1 Detailed Description

template<typename _ToType>
struct __gnu_cxx::_Caster< _ToType >

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a typedef element_type which names tehe type it points to. 2) has a get() const method which returns element_type*. 3) has a constructor which can take one element_type* argument. This type supports the semantics of the pointer cast operators (below.)
The documentation for this struct was generated from the following file:

- cast.h

6.69 __gnu_cxx::_Char_types< _CharT > Struct Template Reference

`#include <char_traits.h>`

Public Types

- typedef unsigned long **int_type**
- typedef std::streamoff **off_type**
- typedef std::streampos **pos_type**
- typedef std::mbstate_t **state_type**

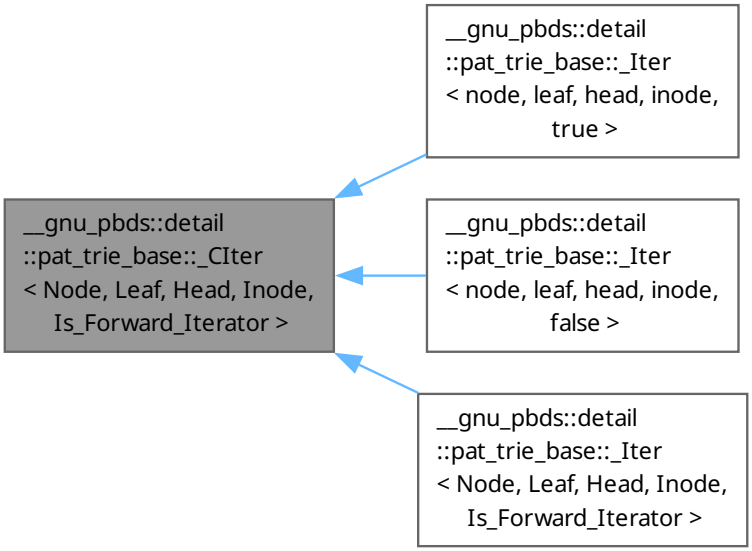
6.69.1 Detailed Description

template<typename _CharT>
struct __gnu_cxx::_Char_types< _CharT >

Mapping from character type to associated types.

Note

This is an implementation class for the generic version of char_traits. It defines int_type, off_type, pos_type, and state_type. By default these are unsigned long, streamoff, streampos, and mbstate_t. Users who need a different set of types, but who don't need to change the definitions of any function defined in char_traits, can specialize __gnu_cxx::_Char_types while leaving __gnu_cxx::char_traits alone.



The documentation for this struct was generated from the following file:

- char_traits.h

6.70 __gnu_pbds::detail::pat_trie_base::_CIter< Node, Leaf, Head, Inode, Is_Forward_Iterator > Class Template Reference

- typedef _NFA< _TraitsT > **_RegexT**

Public Member Functions

- **_Compiler** (const _CharT *__b, const _CharT *__e, const typename _TraitsT::locale_type &__traits, _FlagT __flags)
- shared_ptr< const _RegexT > **_M_get_nfa** () noexcept

6.71.1 Detailed Description

template<typename _TraitsT>
class std::__detail::_Compiler< _TraitsT >

Builds an NFA from an input iterator range.
The _TraitsT type should fulfill the requirements in C++11 28.3 [re.req].
The documentation for this class was generated from the following files:

- regex_compiler.h
- regex_compiler.tcc

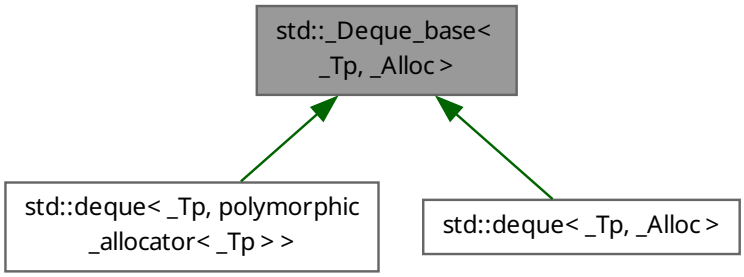
6.72 std::__parallel::_CRandNumber< _MustBeInt > Struct Template Reference

`#include <algo.h>`

Public Member Functions

- int **operator()** (int __limit)

6.72.1 Detailed Description



template<typename _MustBeInt = int>
struct std::__parallel::_CRandNumber< _MustBeInt >

Functor wrapper for std::rand().
The documentation for this struct was generated from the following file:

- algo.h

6.73 std::_Deque_base< _Tp, _Alloc > Class Template Reference

`#include <stl_deque.h>`
Inheritance diagram for std::_Deque_base< _Tp, _Alloc >:

6.73.1 Detailed Description

template<typename _Tp, typename _Alloc>
class std::_Deque_base< _Tp, _Alloc >

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.
Nothing in this class ever constructs or destroys an actual Tp element. (Deque handles that itself.) Only/All memory management is performed here.

6.73.2 Member Function Documentation

_M_initialize_map()

```
template<typename _Tp, typename _Alloc>
void std::_Deque_base< _Tp, _Alloc >::_M_initialize_map (
            size_t __num_elements)  [protected]
```

Layout storage.

Parameters

__num_elements	The count of T's for which to allocate space at first.

The initial underlying memory layout is a bit complicated...
References std::max().
The documentation for this class was generated from the following file:

- stl_deque.h

6.74.1 Detailed Description

template<typename _Tp, typename _Ref, typename _Ptr>
struct std::_Deque_iterator< _Tp, _Ref, _Ptr >

A deque::iterator.
Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.
All the functions are op overloads except for _M_set_node.

6.74.2 Member Function Documentation

_M_set_node()

```
template<typename _Tp, typename _Ref, typename _Ptr>
void std::_Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node (
            _Map_pointer __new_node)  [inline], [noexcept]
```

Prepares to traverse new_node. Sets everything except _M_cur, which should therefore be set by the caller immediately afterwards, based on _M_first and _M_last.
The documentation for this struct was generated from the following files:

- stl_algobase.h
- stl_deque.h

6.75 __gnu_parallel::_DRandomShufflingGlobalData< _RAIter > Struct Template Reference

```
#include <random_shuffle.h>
```

Public Types

- typedef _TraitsType::difference_type **_DifferenceType**
- typedef std::iterator_traits< _RAIter > **_TraitsType**

- int _M_num_bins
- int _M_num_bits
- _RAIter & _M_source
- _DifferenceType * _M_starts
- _ValueType ** _M_temporaries

6.75.1 Detailed Description

template<typename _RAIter>
struct __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >

Data known to every thread participating in __gnu_parallel::__parallel_random_shuffle().

6.75.2 Constructor & Destructor Documentation

_DRandomShufflingGlobalData()

```
template<typename _RAIter>
__gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_DRandomShufflingGlobalData (
            _RAIter & __source)  [inline]
```

Constructor.
References _M_source.

6.75.3 Member Data Documentation

_M_bin_proc

```
template<typename _RAIter>
_ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_bin_proc
```

Number of the thread that will further process the corresponding bin.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_dist

```
template<typename _RAIter>
_DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_dist
```

Two-dimensional array to hold the thread-bin distribution.
Dimensions (_M_num_threads + 1) __x (_M_num_bins + 1).
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_num_bins

```
template<typename _RAIter>
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins
```

Number of bins to distribute to.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_num_bits

```
template<typename _RAIter>
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits
```

Number of bits needed to address the bins.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_source

```
template<typename _RAIter>
_RAIter& __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_source
```

Begin iterator of the __source.
Referenced by _DRandomShufflingGlobalData(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_starts

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_starts
```

Start indexes of the threads' __chunks.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_temporaries

```
template<typename _RAIter>
_ValueType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_temporaries
```

Temporary arrays for each thread.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().
The documentation for this struct was generated from the following file:

- random_shuffle.h

6.76 __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator > Struct Template Reference

```
#include <random_shuffle.h>
```

Public Attributes

- _BinIndex __bins_end
- _BinIndex _M_bins_begin
- int _M_num_threads
- _DRandomShufflingGlobalData< _RAIter > * _M_sd
- uint32_t _M_seed

6.76.1 Detailed Description

template<typename _RAIter, typename _RandomNumberGenerator>
struct __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >

Local data for a thread participating in __gnu_parallel::__parallel_random_shuffle().

6.76.2 Member Data Documentation

__bins_end

```
template<typename _RAIter, typename _RandomNumberGenerator>
_BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end
```

End index for bins taken care of by this thread.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

_M_bins_begin

```
template<typename _RAIter, typename _RandomNumberGenerator>
_BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_bins_begin
```

Begin index for bins taken care of by this thread.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_num_threads

```
template<typename _RAIter, typename _RandomNumberGenerator>
int __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_num_threads
```

Number of threads participating in total.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_sd

```
template<typename _RAIter, typename _RandomNumberGenerator>
_DRandomShufflingGlobalData<_RAIter>* __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumber↩
Generator >::_M_sd
```

Pointer to global data.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

_M_seed

```
template<typename _RAIter, typename _RandomNumberGenerator>
uint32_t __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_seed
```

Random _M_seed for this thread.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().
The documentation for this struct was generated from the following file:

- random_shuffle.h

6.77 __gnu_parallel::_DummyReduct Struct Reference

```
#include <for_each_selectors.h>
```

Public Member Functions

- bool **operator()** (bool, bool) const

6.77.1 Detailed Description

Reduction function doing nothing.
The documentation for this struct was generated from the following file:

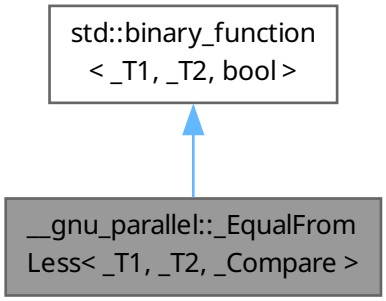
#include <safe_sequence.h>
```

Public Member Functions

- constexpr **_Equal_to** (const _Type &__v)
- bool **operator()** (const _Type &__x) const

6.78.1 Detailed Description



template<typename _Type>
class __gnu_debug::_Equal_to< _Type >

A simple function object that returns true if the passed-in value is equal to the stored value.
The documentation for this class was generated from the following file:

- safe_sequence.h

6.79 __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare > Class Template Reference

`#include <base.h>`
Inheritance diagram for __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- **_EqualFromLess** (_Compare &__comp)
- bool **operator()** (const _T1 &__a, const _T2 &__b)

6.79.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >

Constructs predicate for equality from strict weak ordering predicate.

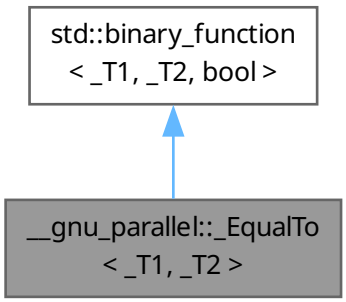
6.79.2 Member Typedef Documentation

first_argument_type

```
typedef _T1 std::binary_function< _T1, _T2, bool >::first_argument_type [inherited]
```
first_argument_type is the type of the first argument

result_type

```
typedef bool std::binary_function< _T1, _T2, bool >::result_type [inherited]
```
result_type is the return type



second_argument_type

```
typedef _T2 std::binary_function< _T1, _T2, bool >::second_argument_type [inherited]
```
second_argument_type is the type of the second argument
The documentation for this class was generated from the following file:

- base.h

6.80 __gnu_parallel::_EqualTo< _T1, _T2 > Struct Template Reference

```
#include <base.h>
```
Inheritance diagram for __gnu_parallel::_EqualTo< _T1, _T2 >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- bool **operator()** (const _T1 &__t1, const _T2 &__t2) const

6.80.1 Detailed Description

template<typename _T1, typename _T2>
struct __gnu_parallel::_EqualTo< _T1, _T2 >

Similar to std::equal_to, but allows two different types.

6.80.2 Member Typedef Documentation

first_argument_type

```
typedef _T1 std::binary_function< _T1, _T2, bool >::first_argument_type  [inherited]
```

`first_argument_type` is the type of the first argument

result_type

```
typedef bool std::binary_function< _T1, _T2, bool >::result_type  [inherited]
```

`result_type` is the return type

second_argument_type

```
typedef _T2 std::binary_function< _T1, _T2, bool >::second_argument_type  [inherited]
```

`second_argument_type` is the type of the second argument
The documentation for this struct was generated from the following file:

- base.h

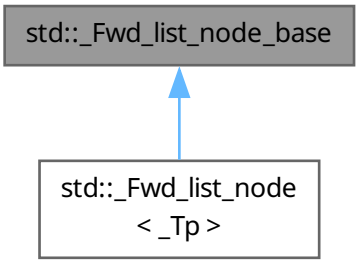
6.88.1 Detailed Description



template<**typename _Tp**>
struct std::_Fwd_list_node< **_Tp** >

A helper node class for forward_list. This is just a linked list with uninitialized storage for a data value in each node. There is a sorting utility method.
The documentation for this struct was generated from the following file:

- forward_list.h

6.89 std::_Fwd_list_node_base Struct Reference

- _Fwd_list_node_base & **operator=** (const _Fwd_list_node_base &)=delete

Public Attributes

- _Fwd_list_node_base * **_M_next**

6.89.1 Detailed Description

A helper basic node class for forward_list.

```
This is just a linked list with nothing inside it.
There are purely list shuffling utility methods here.
```

The documentation for this struct was generated from the following file:

- forward_list.h

6.90 __gnu_parallel::_GuardedIterator< _RAIter, _Compare > Class Template Reference

`#include <multiway_merge.h>`

Public Member Functions

- _GuardedIterator (_RAIter __begin, _RAIter __end, _Compare &__comp)
- operator _RAIter () const
- std::iterator_traits< _RAIter >::value_type & operator* () const
- _GuardedIterator< _RAIter, _Compare > & operator++ ()

Friends

- bool operator< (const _GuardedIterator< _RAIter, _Compare > &__bi1, const _GuardedIterator< _RAIter, _Compare > &__bi2)
- bool operator<= (const _GuardedIterator< _RAIter, _Compare > &__bi1, const _GuardedIterator< _RAIter, _Compare > &__bi2)

6.90.1 Detailed Description

template<typename _RAIter, typename _Compare>
class __gnu_parallel::_GuardedIterator< _RAIter, _Compare >

_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.
The implicit supremum comes with a performance cost.
Deriving from _RAIter is not possible since _RAIter need not be a class.

6.90.2 Constructor & Destructor Documentation

_GuardedIterator()

```
template<typename _RAIter, typename _Compare>
__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::_GuardedIterator (
            _RAIter __begin,
            _RAIter __end,
            _Compare & __comp)  [inline]
```

Constructor. Sets iterator to beginning of sequence.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__comp	Comparator provided for associated overloaded compare operators.

Referenced by operator<, and operator<=.

6.90.3 Member Function Documentation

operator _RAIter()

```
template<typename _RAIter, typename _Compare>
__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter () const  [inline]
```

Convert to wrapped iterator.

Returns

Wrapped iterator.

operator*()

```
template<typename _RAIter, typename _Compare>
std::iterator_traits< _RAIter >::value_type & __gnu_parallel::_GuardedIterator< _RAIter, _Compare
>::operator* () const  [inline]
```

Dereference operator.

Returns

Referenced element.

operator++()

```
template<typename _RAIter, typename _Compare>
_GuardedIterator< _RAIter, _Compare > & __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::↩
operator++ ()  [inline]
```

Pre-increment operator.

Returns

This.

6.90.4 Friends And Related Symbol Documentation

operator<

```
template<typename _RAIter, typename _Compare>
bool operator< (
            const _GuardedIterator< _RAIter, _Compare > & __bi1,
            const _GuardedIterator< _RAIter, _Compare > & __bi2)  [friend]
```

Compare two elements referenced by guarded iterators.

Parameters

__bi1	First iterator.
__bi2	Second iterator.

Returns

`true` if less.

References _GuardedIterator().

operator<=

```
template<typename _RAIter, typename _Compare>
bool operator<= (
            const _GuardedIterator< _RAIter, _Compare > & __bi1,
            const _GuardedIterator< _RAIter, _Compare > & __bi2)  [friend]
```

Compare two elements referenced by guarded iterators.

Parameters

__bi1	First iterator.
__bi2	Second iterator.

Returns

`True` if less equal.

References _GuardedIterator().

6.96.1 Detailed Description

template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory>
class __gnu_parallel::_IteratorPair< _Iterator1, _Iterator2, _IteratorCategory >

A pair of iterators. The usual iterator operations are applied to both child iterators.

6.96.2 Member Typedef Documentation

first_type

```
typedef _Iterator1 std::pair< _Iterator1, _Iterator2 >::first_type  [inherited]
```

The type of the `first` member.

second_type

```
typedef _Iterator2 std::pair< _Iterator1, _Iterator2 >::second_type  [inherited]
```

The type of the `second` member.

6.96.3 Member Function Documentation

explicit() [1/14]

```
_U2 &&constexpr std::pair< _Iterator1, _Iterator2 >::explicit (
            !_S_convertible< _U1 &, _U2 & > ())  [constexpr], [inherited]
```

Converting constructor from a non-const `pair<U1, U2>` lvalue.

explicit() [2/14]

```
_U2 &&constexpr std::pair< _Iterator1, _Iterator2 >::explicit (
            !_S_convertible< _U1 &, _U2 & > ())  [constexpr], [inherited]
```

Converting constructor from a non-const `pair<U1, U2>` lvalue.

explicit() [3/14]

```
std::pair< _Iterator1, _Iterator2 >::explicit (
            !_S_convertible< _U1, _U2 > ()) &&  [constexpr], [inherited]
```

Constructor accepting two values of arbitrary types.

std::pair< _Iterator1, _Iterator2 >::explicit (
            __not_< __and_< __is_implicitly_default_constructible< _Iterator1 >, __is_implicitly↩
_default_constructible< _Iterator2 > > > ()) [inline], [constexpr], [noexcept], [inherited]
```

Default constructor.

explicit() [14/14]

```
std::pair< _Iterator1, _Iterator2 >::explicit (
            __not_< __and_< __is_implicitly_default_constructible< _Iterator1 >, __is_implicitly↩
_default_constructible< _Iterator2 > > > ()) [inline], [constexpr], [noexcept], [inherited]
```

Default constructor.

swap() [1/2]

```
void std::pair< _Iterator1, _Iterator2 >::swap (
            pair< _Iterator1, _Iterator2 > & __p) [inline], [constexpr], [noexcept], [inherited]
```

Swap the first members and then the second members.

swap() [2/2]

```
void std::pair< _Iterator1, _Iterator2 >::swap (
            pair< _Iterator1, _Iterator2 > & __p) [inline], [constexpr], [noexcept], [inherited]
```

Swap the first members and then the second members.

6.96.4 Friends And Related Symbol Documentation

operator<=>() [1/2]

```
common_comparison_category_t< __detail::__synth3way_t< _Iterator1, _U1 >, __detail::__synth3way↩
_t< _Iterator2, _U2 > > operator<=> (
            const pair< _Iterator1, _Iterator2 > & __x,
            const pair< _U1, _U2 > & __y) [related]
```

Defines a lexicographical order for pairs.

For two pairs of comparable types, `P` is ordered before `Q` if `P.first` is less than `Q.first`, or if `P.first` and `Q.first` are equivalent (neither is less than the other) and `P.second` is less than `Q.second`.

operator<=>() [2/2]

```
common_comparison_category_t< __detail::__synth3way_t< _Iterator1, _U1 >, __detail::__synth3way↩
_t< _Iterator2, _U2 > > operator<=> (
            const pair< _Iterator1, _Iterator2 > & __x,
            const pair< _U1, _U2 > & __y) [related]
```

Defines a lexicographical order for pairs.

For two pairs of comparable types, `P` is ordered before `Q` if `P.first` is less than `Q.first`, or if `P.first` and `Q.first` are equivalent (neither is less than the other) and `P.second` is less than `Q.second`.

operator==() [1/2]

```
bool operator== (
            const pair< _Iterator1, _Iterator2 > & __x,
            const pair< _U1, _U2 > & __y) [related]
```

Two pairs are equal iff their members are equal.

operator==() [2/2]

```
bool operator== (
            const pair< _Iterator1, _Iterator2 > & __x,
            const pair< _U1, _U2 > & __y)  [related]
```

Two pairs are equal iff their members are equal.

swap() [1/2]

```
enable_if< __and_< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >::value >::type
swap (
            pair< _Iterator1, _Iterator2 > & __x,
            pair< _Iterator1, _Iterator2 > & __y)  [related]
```

Swap overload for pairs. Calls std::pair::swap().

Note

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see https://gcc.gnu.org/PR38466

swap() [2/2]

```
enable_if< __and_< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >::value >::type
swap (
            pair< _Iterator1, _Iterator2 > & __x,
            pair< _Iterator1, _Iterator2 > & __y)  [related]
```

Swap overload for pairs. Calls std::pair::swap().

Note

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see https://gcc.gnu.org/PR38466

6.96.5 Member Data Documentation

first [1/2]

```
_Iterator1 std::pair< _Iterator1, _Iterator2 >::first  [inherited]
```

The first member.

first [2/2]

```
_Iterator1 std::pair< _Iterator1, _Iterator2 >::first  [inherited]
```

The first member.

second [1/2]

```
_Iterator2 std::pair< _Iterator1, _Iterator2 >::second  [inherited]
```

The second member.

second [2/2]

```
_Iterator2 std::pair< _Iterator1, _Iterator2 >::second  [inherited]
```

The second member.

The documentation for this class was generated from the following file:

- iterator.h

6.97 __gnu_parallel::_IteratorTriple< _Iterator1, _Iterator2, _Iterator3, _IteratorCategory > Class Template Reference

`#include <iterator.h>`

Public Types

- typedef std::iterator_traits< _Iterator1 >::difference_type **difference_type**
- typedef _IteratorCategory **iterator_category**
- typedef _IteratorTriple * **pointer**
- typedef _IteratorTriple & **reference**
- typedef void **value_type**

Public Member Functions

- **_IteratorTriple** (const _Iterator1 &__first, const _Iterator2 &__second, const _Iterator3 &__third)
- **operator _Iterator3** () const
- _IteratorTriple **operator+** (difference_type __delta) const
- _IteratorTriple & **operator++** ()

Public Attributes

- _Iterator1 **_M_first**
- _Iterator2 **_M_second**
- _Iterator3 **_M_third**

6.97.1 Detailed Description

template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory>
class __gnu_parallel::_IteratorTriple< _Iterator1, _Iterator2, _Iterator3, _IteratorCategory >

A triple of iterators. The usual iterator operations are applied to all three child iterators.
The documentation for this class was generated from the following file:

- iterator.h

6.98 __gnu_parallel::_Job< _DifferenceTp > Struct Template Reference

`#include <workstealing.h>`

Public Types

- typedef _DifferenceTp **_DifferenceType**

Public Attributes

- volatile _DifferenceType _M_first
- volatile _DifferenceType _M_last
- volatile _DifferenceType _M_load

6.98.1 Detailed Description

template<typename _DifferenceTp>
struct __gnu_parallel::_Job< _DifferenceTp >

One __job for a certain thread.

6.98.2 Member Data Documentation

_M_first

```
template<typename _DifferenceTp>
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_first
```

First element.
Changed by owning and stealing thread. By stealing thread, always incremented.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

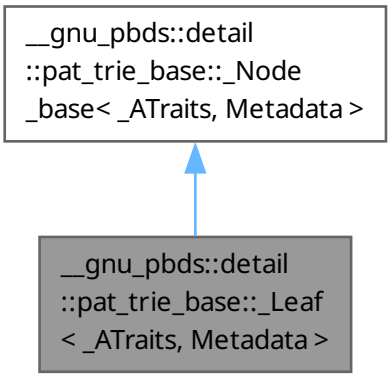
_M_last

```
template<typename _DifferenceTp>
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_last
```

Last element.
Changed by owning thread only.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

_M_load

```
template<typename _DifferenceTp>
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_load
```



Number of elements, i.e. _M_last-_M_first+1.
Changed by owning thread only.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().
The documentation for this struct was generated from the following file:

- workstealing.h

6.99 __gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata > Struct Template Reference

```
#include <pat_trie_base.hpp>
```

Inheritance diagram for __gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata >:

Public Types

- typedef _ATraits::const_iterator **a_const_iterator**
- typedef detail::rebind_traits< _Alloc, _ATraits >::const_pointer **a_const_pointer**
- typedef _ATraits **access_traits**
- typedef _Alloc **allocator_type**
- typedef _Node_base< _ATraits, Metadata > **base_type**
- typedef type_traits::const_reference **const_reference**
- typedef detail::rebind_traits< _Alloc, _Node_base >::pointer **node_pointer**
- typedef type_traits::reference **reference**
- typedef base_type::type_traits **type_traits**
- typedef type_traits::value_type **value_type**

Public Member Functions

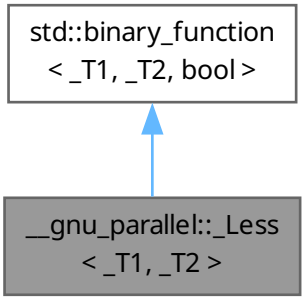
- reference **value** ()
- const_reference **value** () const

Public Attributes

- node_pointer **m_p_parent**
- const node_type **m_type**

6.99.1 Detailed Description



template<typename _ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata >

Leaf node for PATRICIA tree.
The documentation for this struct was generated from the following file:

- pat_trie_base.hpp

6.100 __gnu_parallel::_Less< _T1, _T2 > Struct Template Reference

`#include <base.h>`
Inheritance diagram for __gnu_parallel::_Less< _T1, _T2 >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- bool **operator()** (const _T1 &__t1, const _T2 &__t2) const
- bool **operator()** (const _T2 &__t2, const _T1 &__t1) const

6.100.1 Detailed Description

template<typename _T1, typename _T2>
struct __gnu_parallel::_Less< _T1, _T2 >

Similar to std::less, but allows two different types.

6.100.2 Member Typedef Documentation

first_argument_type

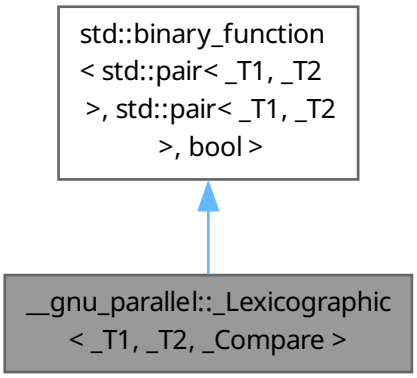
`typedef _T1 std::binary_function< _T1, _T2, bool >::first_argument_type [inherited]`
`first_argument_type` is the type of the first argument

result_type

`typedef bool std::binary_function< _T1, _T2, bool >::result_type [inherited]`
`result_type` is the return type

second_argument_type

```
typedef _T2 std::binary_function< _T1, _T2, bool >::second_argument_type  [inherited]
```



second_argument_type is the type of the second argument
The documentation for this struct was generated from the following file:

- base.h

6.101 __gnu_parallel::_Lexicographic< _T1, _T2, _Compare > Class Template Reference

```
#include <multiseq_selection.h>
```

Inheritance diagram for __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >:

Public Types

- typedef std::pair< _T1, _T2 > first_argument_type
- typedef bool result_type
- typedef std::pair< _T1, _T2 > second_argument_type

Public Member Functions

- **_Lexicographic** (_Compare &__comp)
- bool **operator()** (const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2) const

6.101.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >

Compare __a pair of types lexicographically, ascending.

6.101.2 Member Typedef Documentation

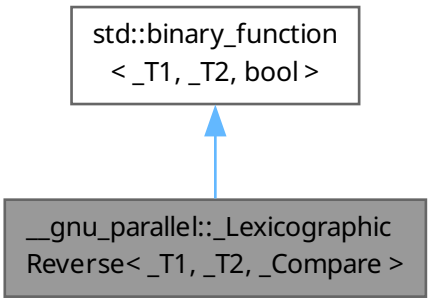
first_argument_type

```
typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 >, std::pair< _T1, _T2
>, bool >::first_argument_type  [inherited]
```

first_argument_type is the type of the first argument

result_type

typedef bool std::binary_function< std::pair< _T1, _T2 >, std::pair< _T1, _T2 >, bool >::↩
result_type [inherited]
result_type is the return type



second_argument_type

typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 >, std::pair< _T1, _T2 >, bool >::second_argument_type [inherited]
second_argument_type is the type of the second argument
The documentation for this class was generated from the following file:

- multiseq_selection.h

6.102 __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare > Class Template Reference

#include <multiseq_selection.h>
Inheritance diagram for __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- **_LexicographicReverse** (_Compare &__comp)
- bool **operator()** (const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2) const

6.102.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >

Compare __a pair of types lexicographically, descending.

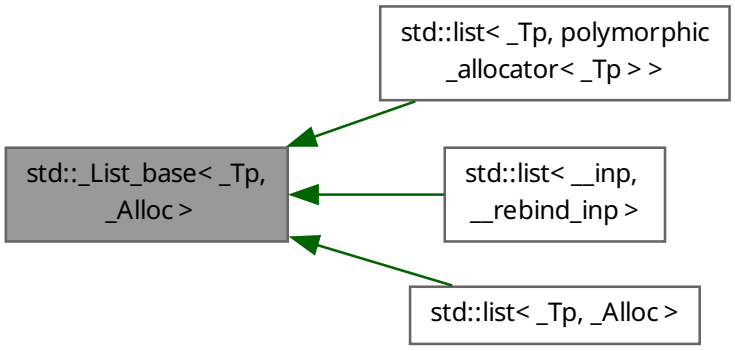
6.102.2 Member Typedef Documentation

first_argument_type

`typedef _T1 std::binary_function< _T1, _T2, bool >::first_argument_type [inherited]`
`first_argument_type` is the type of the first argument

result_type

`typedef bool std::binary_function< _T1, _T2, bool >::result_type [inherited]`
`result_type` is the return type



second_argument_type

`typedef _T2 std::binary_function< _T1, _T2, bool >::second_argument_type [inherited]`
`second_argument_type` is the type of the second argument

6.108.1 Detailed Description

The list node header.
The documentation for this struct was generated from the following file:

- stl_list.h

6.109 __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser Struct Reference

`#include <losertree.h>`

Public Attributes

- _Tp _M_key
- int _M_source
- bool _M_sup

6.109.1 Detailed Description

template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser

Internal representation of a _LoserTree element.

6.109.2 Member Data Documentation

_M_key

```
template<typename _Tp, typename _Compare>
_Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key
```

_M_key of the element in the _LoserTree.

_M_source

```
template<typename _Tp, typename _Compare>
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source
```

__index of the __source __sequence.

_M_sup

```
template<typename _Tp, typename _Compare>
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup
```

flag, true iff this is a "maximum" __sentinel.
The documentation for this struct was generated from the following file:

- losertree.h

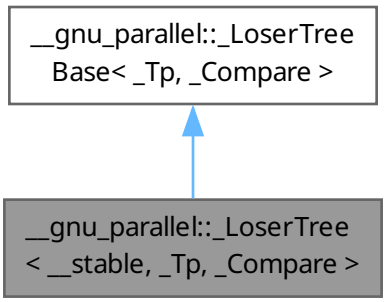
6.110 __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser Struct Reference

`#include <losertree.h>`

Public Attributes

- const _Tp * **_M_keyp**
- int **_M_source**
- bool **_M_sup**

6.110.1 Detailed Description



template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser

Internal representation of _LoserTree __elements.
The documentation for this struct was generated from the following file:

- losertree.h

6.111 __gnu_parallel::_LoserTree< __stable, _Tp, _Compare > Class Template Reference

`#include <losertree.h>`
Inheritance diagram for __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >:

Public Member Functions

- **_LoserTree** (unsigned int __k, _Compare __comp)
- void __delete_min_insert (_Tp __key, bool __sup)
- int __get_min_source ()
- void **__init** ()
- unsigned int **__init_winner** (unsigned int __root)
- void __insert_start (const _Tp &__key, int __source, bool __sup)

Protected Attributes

- unsigned int **_M_ik**
- unsigned int _M_log_k
- unsigned int **_M_offset**

6.111.1 Detailed Description

template<bool __stable, typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >

Stable _LoserTree variant.
Provides the stable implementations of insert_start, __init_winner, __init and __delete_min_insert.
Unstable variant is done using partial specialisation below.

6.111.2 Member Function Documentation

__delete_min_insert()

```
template<bool __stable, typename _Tp, typename _Compare>
void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::__delete_min_insert (
```

```
            _Tp __key,
            bool __sup)  [inline]
```

Delete the smallest element and insert a new element from the previously smallest element's sequence.
This implementation is stable.

__get_min_source()

```
template<typename _Tp, typename _Compare>
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ()  [inline], [inherited]
```

Returns

the index of the sequence with the smallest element.

References _M_losers.

__insert_start()

```
template<typename _Tp, typename _Compare>
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
            const _Tp & __key,
            int __source,
            bool __sup)  [inline], [inherited]
```

Initializes the sequence "_M_source" with the element "__key".

Parameters

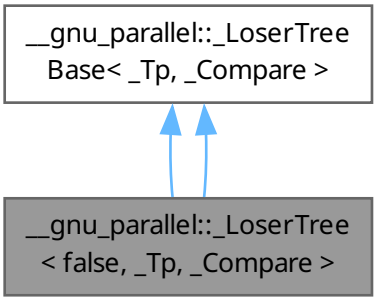
__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

References _M_first_insert, and _M_losers.

6.111.3 Member Data Documentation

_M_log_k

```
template<typename _Tp, typename _Compare>
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k  [protected], [inherited]
```



log_2{_M_k}
Referenced by _LoserTreeBase().
The documentation for this class was generated from the following file:

- losertree.h

6.112 __gnu_parallel::_LoserTree< false, _Tp, _Compare > Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for __gnu_parallel::_LoserTree< false, _Tp, _Compare >:

6.112.1 Detailed Description

template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< false, _Tp, _Compare >

Unstable _LoserTree variant.
Stability (non-stable here) is selected with partial specialization.

6.112.2 Member Function Documentation

__delete_min_insert()

```
template<typename _Tp, typename _Compare>
void __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__delete_min_insert (
            _Tp __key,
            bool __sup)  [inline]
```

Delete the _M_key smallest element and insert the element __key instead.

Parameters

__key	the _M_key to insert
__sup	true iff __key is an explicitly marked supremum

__get_min_source()

```
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source () [inline]
```

Returns

the index of the sequence with the smallest element.

__init_winner()

```
template<typename _Tp, typename _Compare>
unsigned int __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__init_winner (
            unsigned int __root) [inline]
```

Computes the winner of the competition at position "__root".
Called recursively (starting at 0) to build the initial tree.

Parameters

__root	__index of the "game" to start.

References __init_winner().
Referenced by __init_winner().

__insert_start()

```
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
            const _Tp & __key,
            int __source,
            bool __sup) [inline]
```

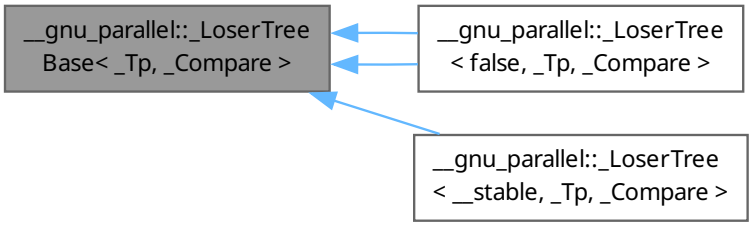
Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

6.112.3 Member Data Documentation

_M_log_k



```
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected]
```

log_2{_M_k}
The documentation for this class was generated from the following file:

- unsigned int **_M_offset**

6.113.1 Detailed Description

template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >

Guarded loser/tournament tree.
The smallest element is at the top.
Guarding is done explicitly through one flag _M_sup per element, inf is not needed due to a better initialization routine.
This is a well-performing variant.

Parameters

_Tp	the element type

_Compare	the comparator to use, defaults to std::less<_Tp>

6.113.2 Constructor & Destructor Documentation

_LoserTreeBase()

```
template<typename _Tp, typename _Compare>
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase (
            unsigned int __k,
            _Compare __comp)  [inline]
```

The constructor.

Parameters

__k	The number of sequences to merge.
__comp	The comparator to use.

References __gnu_parallel::__rd_log2(), _M_comp, _M_first_insert, _M_log_k, and _M_losers.

~_LoserTreeBase()

```
template<typename _Tp, typename _Compare>
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~_LoserTreeBase ()  [inline]
```

The destructor.
References _M_losers.

6.113.3 Member Function Documentation

__get_min_source()

```
template<typename _Tp, typename _Compare>
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ()  [inline]
```

Returns

the index of the sequence with the smallest element.

References _M_losers.

__insert_start()

```
template<typename _Tp, typename _Compare>
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
            const _Tp & __key,
            int __source,
            bool __sup)  [inline]
```

Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence

__sup	flag that determines whether the value to insert is an explicit __supremum.

References _M_first_insert, and _M_losers.

6.113.4 Member Data Documentation

_M_comp

```
template<typename _Tp, typename _Compare>
_Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp  [protected]
```

_Compare to use.
Referenced by _LoserTreeBase().

_M_first_insert

```
template<typename _Tp, typename _Compare>
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert  [protected]
```

State flag that determines whether the _LoserTree is empty.
Only used for building the _LoserTree.
Referenced by _LoserTreeBase(), and __insert_start().

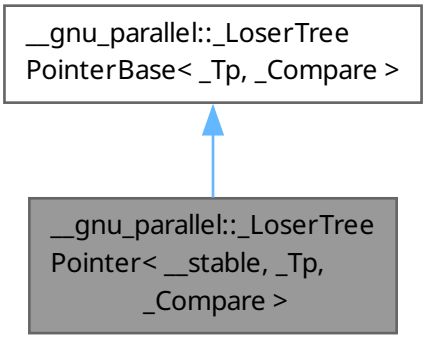
_M_log_k

```
template<typename _Tp, typename _Compare>
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k  [protected]
```

log_2{_M_k}
Referenced by _LoserTreeBase().

_M_losers

```
template<typename _Tp, typename _Compare>
_Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers  [protected]
```



_LoserTree __elements.
Referenced by _LoserTreeBase(), ~_LoserTreeBase(), __get_min_source(), and __insert_start().
The documentation for this class was generated from the following file:

- losertree.h

6.114 __gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare > Class Template Reference

- unsigned int **_M_offset**

6.119.1 Detailed Description

template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >

Unguarded loser tree, keeping only pointers to the elements in the tree structure.
No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.
The documentation for this class was generated from the following file:

- losertree.h

6.120 __gnu_parallel::_LoserTreeTraits< _Tp > Struct Template Reference

`#include <multiway_merge.h>`

Static Public Attributes

- static const bool _M_use_pointer

6.120.1 Detailed Description

template<typename _Tp>
struct __gnu_parallel::_LoserTreeTraits< _Tp >

Traits for determining whether the loser tree should use pointers or copies.
The field "_M_use_pointer" is used to determine whether to use pointers in he loser trees or whether to copy the values into the loser tree.
The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.
Specialize for your data type to customize the behavior.
Example:
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };
template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };

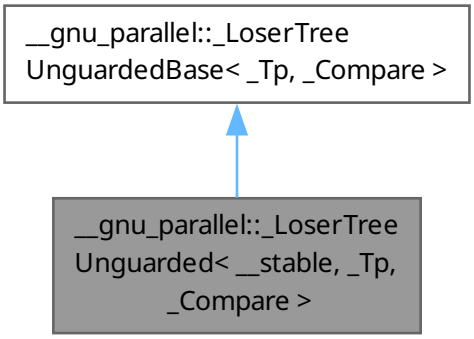
Parameters

_Tp	type to give the loser tree traits for.

6.120.2 Member Data Documentation

_M_use_pointer

```
template<typename _Tp>
const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer  [static]
```



True iff to use pointers instead of values in loser trees.
The default behavior is to use pointers if the data type is four times as big as the pointer to it.
The documentation for this struct was generated from the following file:

- multiway_merge.h

6.121 __gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare > Class Template Reference

```
#include <losertree.h>
```

Public Attributes

- metadata_type **m_metadata**

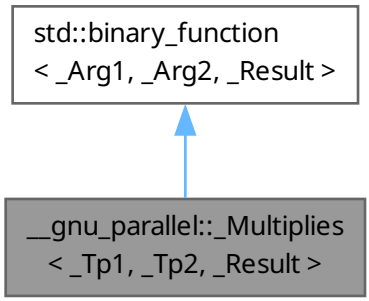
6.125.1 Detailed Description



template<typename _Alloc>
struct __gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >

Specialization for null metadata.
The documentation for this struct was generated from the following file:

- pat_trie_base.hpp

6.126 __gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result > Struct Template Reference

`#include <base.h>`
Inheritance diagram for __gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result >:

Public Types

- typedef _Arg1 first_argument_type
- typedef _Result result_type
- typedef _Arg2 second_argument_type

Public Member Functions

- _Result **operator()** (const _Tp1 &__x, const _Tp2 &__y) const

6.126.1 Detailed Description

template<typename _Tp1, typename _Tp2, typename _Result = __typeof__(*static_cast<_Tp1*>(0) * *static↩ _cast<_Tp2*>(0))>
struct __gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result >

Similar to std::multiplies, but allows two different types.

6.126.2 Member Typedef Documentation

first_argument_type

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg1 std::binary_function< _Arg1, _Arg2, _Result >::first_argument_type  [inherited]
```

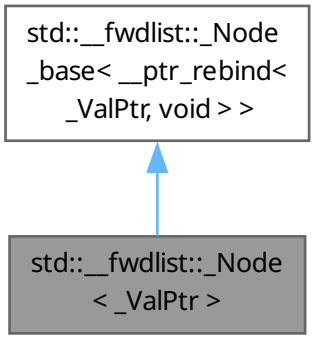
`first_argument_type` is the type of the first argument

result_type

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Result std::binary_function< _Arg1, _Arg2, _Result >::result_type  [inherited]
```

`result_type` is the return type

second_argument_type



```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result >::second_argument_type  [inherited]
```

`second_argument_type` is the type of the second argument
The documentation for this struct was generated from the following file:

6.130.1 Detailed Description

template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _Alloc>
class __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >

Node const iterator.

6.130.2 Member Typedef Documentation

metadata_const_reference

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
typedef rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference
```

Const metadata reference type.

metadata_type

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type
```

Metadata type.

6.130.3 Member Function Documentation

get_child()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
_Node_citer __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::get_child (
            size_type i) const  [inline]
```

Returns a __const node __iterator to the corresponding node's i-th child.

get_metadata()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata () const  [inline]
```

Metadata access.

num_children()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children () const  [inline]
```

Returns the number of children in the corresponding node.
Referenced by __gnu_pbds::detail::pat_trie_base::_Node_citer< node, leaf, head, inode, const_iterator, iterator, _Alloc >::operator*().

operator"!=()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!= (
            const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const  [inline]
```

Compares content (negatively) to a different iterator object.

operator*()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _↩
CIterator, Iterator, _Alloc >::operator* () const  [inline]
```

Const access; returns the __const iterator* associated with the current leaf.

operator==()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
            const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const  [inline]
```

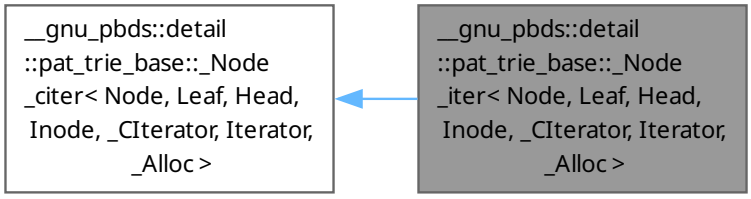
Compares content to a different iterator object.

valid_prefix()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
std::pair< a_const_iterator, a_const_iterator > __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix () const  [inline]
```

Subtree valid prefix.

The documentation for this class was generated from the following file:



- pat_trie_base.hpp

6.131 __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > Class Template Reference

6.131.1 Detailed Description

template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _Alloc>
class __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >

Node iterator.

6.131.2 Member Typedef Documentation

metadata_const_reference

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
typedef rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference  [inherited]
```

Const metadata reference type.

metadata_type

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type  [inherited]
```

Metadata type.

6.131.3 Member Function Documentation

get_child()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
_Node_iter __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::get_child (
            size_type i) const  [inline]
```

Returns a node __iterator to the corresponding node's i-th child.

get_metadata()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata () const  [inline], [inherited]
```

Metadata access.

num_children()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children () const  [inline], [inherited]
```

Returns the number of children in the corresponding node.
Referenced by __gnu_pbds::detail::pat_trie_base::_Node_citer< node, leaf, head, inode, const_iterator, iterator, _Alloc >::operator*().

operator"!=()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!= (
            const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const  [inline], [inherited]
```

Compares content (negatively) to a different iterator object.

operator*()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
reference __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::operator* () const  [inline]
```

Access; returns the iterator* associated with the current leaf.

operator==()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
            const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const  [inline], [inherited]
```

Compares content to a different iterator object.

valid_prefix()

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
std::pair< a_const_iterator, a_const_iterator > __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix () const  [inline], [inherited]
```

Subtree valid prefix.

The documentation for this class was generated from the following file:

- _DifferenceType * _M_starts
- _ValueType ** _M_temporary

6.138.1 Detailed Description

template<typename _RAIter>
struct __gnu_parallel::_PMWMSSortingData< _RAIter >

Data accessed by all threads.
PMWMS = parallel multiway mergesort

6.138.2 Member Data Documentation

_M_num_threads

```
template<typename _RAIter>
_ThreadIndex __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_num_threads
```

Number of threads involved.
Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

_M_offsets

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_offsets
```

Offsets to add to the found positions.
Referenced by __gnu_parallel::parallel_sort_mwms().

_M_pieces

```
template<typename _RAIter>
std::vector<_Piece<_DifferenceType> >* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_pieces
```

Pieces of data to merge [thread][__sequence].
Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

_M_samples

```
template<typename _RAIter>
_ValueType* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_samples
```

Samples.
Referenced by __gnu_parallel::__determine_samples(), and __gnu_parallel::parallel_sort_mwms().

_M_source

```
template<typename _RAIter>
_RAIter __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_source
```

Input __begin.
Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_

_M_starts

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_starts
```

Start indices, per thread.
Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_

_M_temporary

```
template<typename _RAIter>
_ValueType** __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_temporary
```

Storage in which to sort.
Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().
The documentation for this struct was generated from the following file:

- multiway_mergesort.h

6.139.1 Detailed Description

template<typename _Storage_policy>
class __gnu_cxx::_Pointer_adapter< _Storage_policy >

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.
The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' Allocator::pointer is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the Allocator::pointer typedef appropriately for pointer types. 2) if you need pointer casting, use the __pointer_cast<> functions from ext/cast.h. This allows pointer cast operations to be overloaded as necessary by custom pointers.
Note: The const qualifier works with this pointer adapter as follows:
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const _Tp> >; _Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* const == const _Pointer_↩ adapter<_Std_pointer_impl<const _Tp> >;
The documentation for this class was generated from the following file:

- pointer.h

6.140 __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp > Class Template Reference

`#include <base.h>`

Public Types

- typedef _DifferenceTp **_DifferenceType**
- typedef _PseudoSequenceIterator< _Tp, uint64_t > **iterator**

Public Member Functions

- _PseudoSequence (const _Tp &__val, _DifferenceType __count)
- iterator begin () const
- iterator end () const

6.140.1 Detailed Description

template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

Parameters

_Tp	Sequence _M_value type.
_DifferenceTp	Sequence difference type.

6.140.2 Constructor & Destructor Documentation

_PseudoSequence()

```
template<typename _Tp, typename _DifferenceTp>
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::_PseudoSequence (
            const _Tp & __val,
            _DifferenceType __count)  [inline]
```

Constructor.

Parameters

__val	Element of the sequence.
__count	Number of (virtual) copies.

6.140.3 Member Function Documentation

begin()

```
template<typename _Tp, typename _DifferenceTp>
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin () const  [inline]
```

Begin iterator.

end()

```
template<typename _Tp, typename _DifferenceTp>
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end () const  [inline]
```

End iterator.

The documentation for this class was generated from the following file:

- base.h

6.141 __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp > Class Template Reference

```
#include <base.h>
```

Public Types

- typedef _DifferenceTp **_DifferenceType**

Public Member Functions

- **_PseudoSequenceIterator** (const _Tp &__val, _DifferenceType __pos)
- bool **operator!=** (const _PseudoSequenceIterator &__i2)
- const _Tp & **operator*** () const
- _PseudoSequenceIterator & **operator++** ()
- _PseudoSequenceIterator **operator++** (int)
- _DifferenceType **operator-** (const _PseudoSequenceIterator &__i2)
- bool **operator==** (const _PseudoSequenceIterator &__i2)
- const _Tp & **operator[ ]** (_DifferenceType) const

6.141.1 Detailed Description

template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >

_Iterator associated with __gnu_parallel::_PseudoSequence. If features the usual random-access iterator functionality.

Parameters

_Tp	Sequence _M_value type.
_DifferenceTp	Sequence difference type.

The documentation for this class was generated from the following file:

- base.h

6.142 __gnu_parallel::_QSBThreadLocal< _RAIter > Struct Template Reference

`#include <balanced_quicksort.h>`

Public Types

- typedef _TraitsType::difference_type **_DifferenceType**
- typedef std::pair< _RAIter, _RAIter > _Piece
- typedef std::iterator_traits< _RAIter > **_TraitsType**

Public Member Functions

- _QSBThreadLocal (int __queue_size)

Public Attributes

- volatile _DifferenceType * _M_elements_leftover
- _Piece _M_global
- _Piece _M_initial
- _RestrictedBoundedConcurrentQueue< _Piece > _M_leftover_parts
- _ThreadIndex _M_num_threads

6.142.1 Detailed Description

template<typename _RAIter>
struct __gnu_parallel::_QSBThreadLocal< _RAIter >

Information local to one thread in the parallel quicksort run.

6.142.2 Member Typedef Documentation

_Piece

```
template<typename _RAIter>
typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSBThreadLocal< _RAIter >::_Piece
```

Continuous part of the sequence, described by an iterator pair.

6.142.3 Constructor & Destructor Documentation

_QSBThreadLocal()

```
template<typename _RAIter>
__gnu_parallel::_QSBThreadLocal< _RAIter >::_QSBThreadLocal (
            int __queue_size)  [inline]
```

Constructor.

Parameters

__queue_size	size of the work-stealing queue.

References _M_leftover_parts.

6.142.4 Member Data Documentation

_M_elements_leftover

```
template<typename _RAIter>
volatile _DifferenceType* __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_elements_leftover
```

Pointer to a counter of elements left over to sort.
Referenced by __gnu_parallel::__qsb_conquer(), and __gnu_parallel::__qsb_local_sort_with_helping().

_M_global

```
template<typename _RAIter>
_Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_global
```

The complete sequence to sort.

_M_initial

```
template<typename _RAIter>
_Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_initial
```

Initial piece to work on.
Referenced by __gnu_parallel::__qsb_conquer(), and __gnu_parallel::__qsb_local_sort_with_helping().

_M_leftover_parts

```
template<typename _RAIter>
_RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_↩
leftover_parts
```

Work-stealing queue.
Referenced by _QSBThreadLocal(), and __gnu_parallel::__qsb_local_sort_with_helping().

_M_num_threads

```
template<typename _RAIter>
_ThreadIndex __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_num_threads
```

Number of threads involved in this algorithm.
Referenced by __gnu_parallel::__qsb_local_sort_with_helping().
The documentation for this struct was generated from the following file:

- balanced_quicksort.h

6.143 std::__detail::_Quoted_string< _String, _CharT > Struct Template Reference

```
#include <quoted_string.h>
```

Public Member Functions

- **_Quoted_string** (_String __str, _CharT __del, _CharT __esc)
- _Quoted_string & **operator=** (_Quoted_string &)=delete

Public Attributes

- _CharT **_M_delim**
- _CharT **_M_escape**
- _String **_M_string**

Friends

- template<typename _CharT2, typename _Traits, typename _String2>
  std::basic_ostream< _CharT2, _Traits > & **operator**<< (std::basic_ostream< _CharT2, _Traits > &__os, const _Quoted_string< _String2, _CharT2 > &__str)
- template<typename _CharT2, typename _Traits>
  std::basic_ostream< _CharT2, _Traits > & **operator**<< (std::basic_ostream< _CharT2, _Traits > &__os, const _Quoted_string< const _CharT2 *, _CharT2 > &__str)
- template<typename _CharT2, typename _Traits, typename _Alloc>
  std::basic_istream< _CharT2, _Traits > & **operator**>> (std::basic_istream< _CharT2, _Traits > &__is, const _Quoted_string< basic_string< _CharT2, _Traits, _Alloc > &, _CharT2 > &__str)

6.143.1 Detailed Description

template<typename _String, typename _CharT>
struct std::__detail::_Quoted_string< _String, _CharT >

Struct for delimited strings.
The documentation for this struct was generated from the following file:

- quoted_string.h

6.144 __gnu_parallel::_RandomNumber Class Reference

`#include <random_number.h>`

Public Member Functions

- _RandomNumber ()
- _RandomNumber (uint32_t __seed, uint64_t _M_supremum=0x100000000ULL)
- unsigned long __genrand_bits (int __bits)
- uint32_t operator() ()
- uint32_t operator() (uint64_t local_supremum)

6.144.1 Detailed Description

Random number generator, based on the Mersenne twister.

6.144.2 Constructor & Destructor Documentation

_RandomNumber() [1/2]

```
__gnu_parallel::_RandomNumber::_RandomNumber ()  [inline]
```

Default constructor. Seed with 0.

_RandomNumber() [2/2]

```
__gnu_parallel::_RandomNumber::_RandomNumber (
            uint32_t __seed,
            uint64_t _M_supremum = 0x100000000ULL)  [inline]
```

Constructor.

Parameters

__seed	Random __seed.

_M_supremum	Generate integer random numbers in the interval [0,_M_supremum).

6.144.3 Member Function Documentation

__genrand_bits()

```
unsigned long __gnu_parallel::_RandomNumber::__genrand_bits (
            int __bits)  [inline]
```

Generate a number of random bits, run-time parameter.

Parameters

__bits	Number of bits to generate.

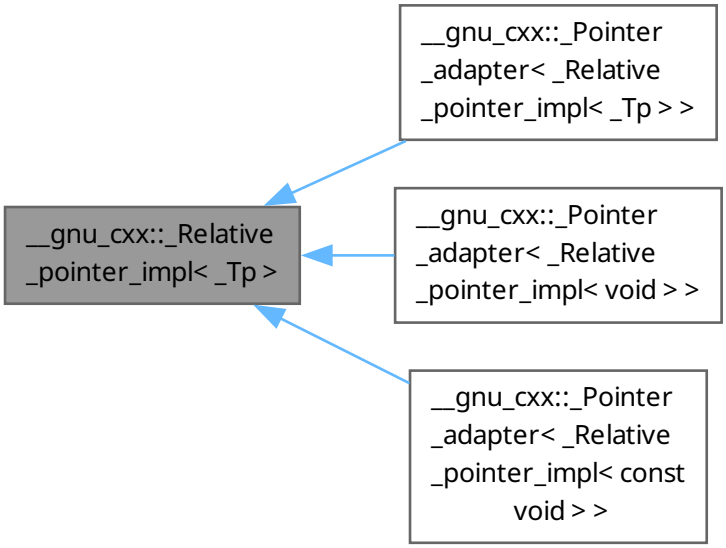
operator()() [1/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() ()  [inline]
```

Generate unsigned random 32-bit integer.

operator()() [2/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() (
            uint64_t local_supremum)  [inline]
```



Generate unsigned random 32-bit integer in the interval [0,local_supremum).
The documentation for this class was generated from the following file:

- random_number.h

6.145 __gnu_cxx::_Relative_pointer_impl< _Tp > Class Template Reference

```
#include <pointer.h>
```

Inheritance diagram for __gnu_cxx::_Relative_pointer_impl< _Tp >:

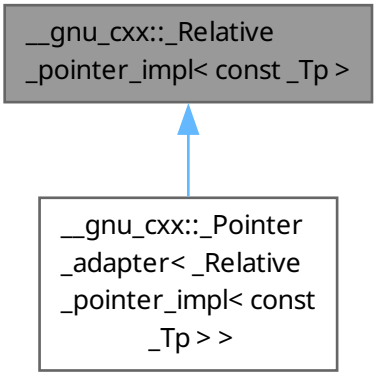
Public Types

- typedef _Tp **element_type**

Public Member Functions

- _Tp * **get** () const
- bool **operator<** (const _Relative_pointer_impl &__rarg) const
- bool **operator==** (const _Relative_pointer_impl &__rarg) const
- void **set** (_Tp *__arg)

6.145.1 Detailed Description



template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl< _Tp >

A storage policy for use with _Pointer_adapter<> which stores the pointer's address as an offset value which is relative to its own address.
This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.
The documentation for this class was generated from the following file:

- pointer.h

6.146 __gnu_cxx::_Relative_pointer_impl< const _Tp > Class Template Reference

`#include <pointer.h>`
Inheritance diagram for __gnu_cxx::_Relative_pointer_impl< const _Tp >:

Public Types

- typedef const _Tp **element_type**

Public Member Functions

- const _Tp * **get** () const
- bool **operator<** (const _Relative_pointer_impl &__rarg) const
- bool **operator==** (const _Relative_pointer_impl &__rarg) const
- void **set** (const _Tp *__arg)

6.146.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl< const _Tp >

Relative_pointer_impl needs a specialization for const T because of the casting done during pointer arithmetic.
The documentation for this class was generated from the following file:

- pointer.h

6.147 __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp > Class Template Reference

`#include <queue.h>`

Public Member Functions

- _RestrictedBoundedConcurrentQueue (_SequenceIndex __max_size)
- ~_RestrictedBoundedConcurrentQueue ()

- bool pop_back (_Tp &__t)
- bool pop_front (_Tp &__t)
- void push_front (const _Tp &__t)

6.147.1 Detailed Description

template<typename _Tp>
class __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >

Double-ended queue of bounded size, allowing lock-free atomic access. push_front() and pop_front() must not be called concurrently to each other, while pop_back() can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

Parameters

_Tp	Contained element type.

6.147.2 Constructor & Destructor Documentation

_RestrictedBoundedConcurrentQueue()

```
template<typename _Tp>
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::_RestrictedBoundedConcurrentQueue (
            _SequenceIndex __max_size)  [inline]
```

Constructor. Not to be called concurrent, of course.

Parameters

__max_size	Maximal number of elements to be contained.

References __gnu_parallel::__encode2().

~_RestrictedBoundedConcurrentQueue()

```
template<typename _Tp>
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::~_RestrictedBoundedConcurrentQueue ()
[inline]
```

Destructor. Not to be called concurrent, of course.

6.147.3 Member Function Documentation

pop_back()

```
template<typename _Tp>
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back (
            _Tp & __t)  [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with pop_front().
References __gnu_parallel::__compare_and_swap(), __gnu_parallel::__decode2(), and __gnu_parallel::__encode2().

pop_front()

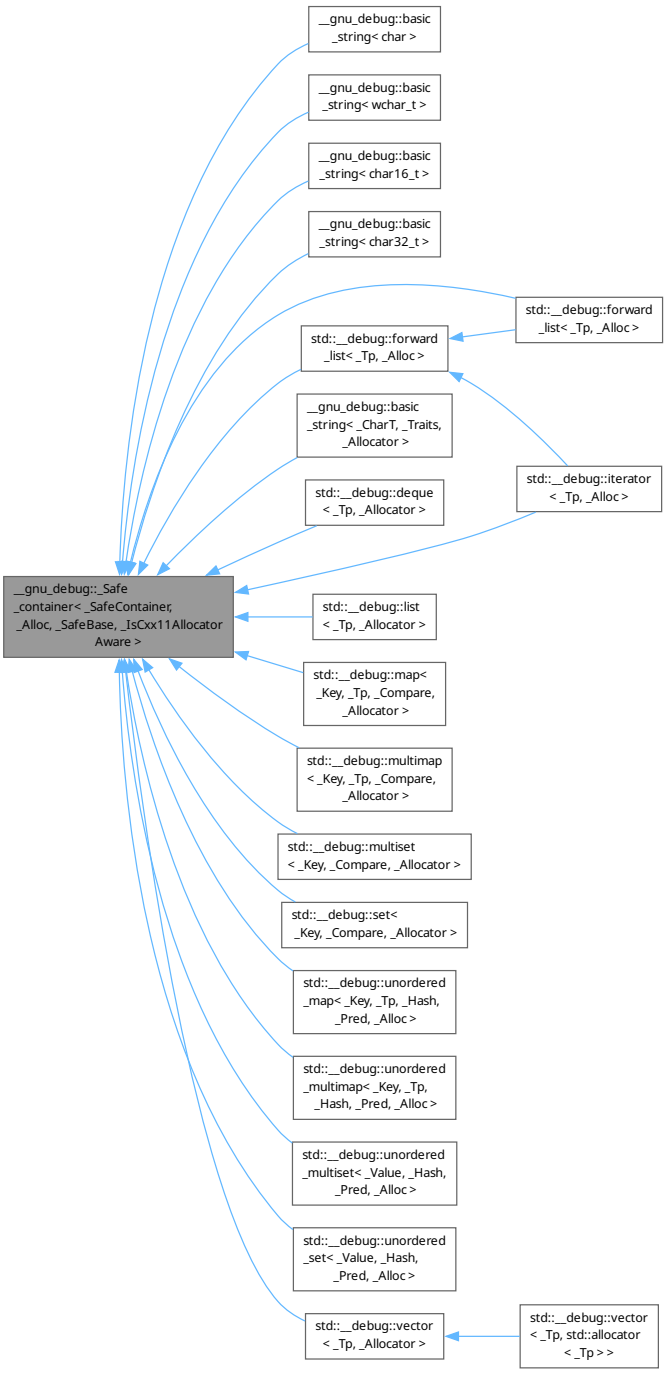
```
template<typename _Tp>
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front (
            _Tp & __t)  [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with pop_front().
References __gnu_parallel::__compare_and_swap(), __gnu_parallel::__decode2(), and __gnu_parallel::__encode2().

push_front()

```
template<typename _Tp>
void __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::push_front (
            const _Tp & __t)  [inline]
```

Pushes one element into the queue at the front end. Must not be called concurrently with pop_front().
References __gnu_parallel::__decode2(), __gnu_parallel::__encode2(), and __gnu_parallel::__fetch_and_add().
The documentation for this class was generated from the following file:



- queue.h

6.148 __gnu_debug::_Safe_container< _SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware > Class Template Reference

```
#include <safe_container.h>
```

Inheritance diagram for __gnu_debug::_Safe_container< _SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware

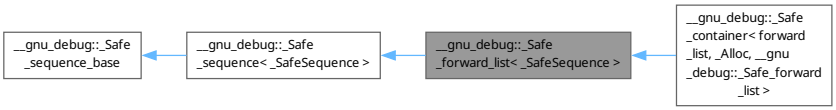
>:

Protected Member Functions

- **_Safe_container** (_Safe_container &&)=default
- constexpr **_Safe_container** (_Safe_container &&__x, const _Alloc &__a)
- **_Safe_container** (const _Safe_container &)=default

- constexpr void **_M_swap** (const _Safe_container &__x) const noexcept
- constexpr _Safe_container & **operator=** (_Safe_container &&__x) noexcept
- constexpr _Safe_container & **operator=** (const _Safe_container &) noexcept=default

6.148.1 Detailed Description



template<typename _SafeContainer, typename _Alloc, template< typename > class _SafeBase, bool _IsCxx11AllocatorAware = true>
class __gnu_debug::_Safe_container< _SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware >

Safe class dealing with some allocator dependent operations.
The documentation for this class was generated from the following file:

- safe_container.h

6.149 __gnu_debug::_Safe_forward_list< _SafeSequence > Class Template Reference

`#include <forward_list>`
Inheritance diagram for __gnu_debug::_Safe_forward_list< _SafeSequence >:

Public Member Functions

- constexpr void _M_invalidate_if (_Predicate __pred) const
- void _M_transfer_from_if (const _Safe_sequence &__from, _Predicate __pred) const

Public Attributes

- _Safe_iterator_base * _M_const_iterators
- _Safe_iterator_base * _M_iterators
- unsigned int _M_version

Protected Member Functions

- void _M_detach_all () const
- void _M_detach_singular () const
- __gnu_cxx::__mutex & _M_get_mutex () const noexcept
- void **_M_invalidate_all** () const
- void _M_revalidate_singular () const
- void **_M_swap** (const _Safe_forward_list &) const noexcept
- void _M_swap (const _Safe_sequence_base &__x) const noexcept

6.149.1 Detailed Description

template<typename _SafeSequence>
class __gnu_debug::_Safe_forward_list< _SafeSequence >

Special iterators swap and invalidation for forward_list because of the before_begin iterator.

6.149.2 Member Function Documentation

_M_detach_all()

void __gnu_debug::_Safe_sequence_base::_M_detach_all () const [protected], [inherited]
Detach all iterators, leaving them singular.

_M_detach_singular()

void __gnu_debug::_Safe_sequence_base::_M_detach_singular () const [protected], [inherited]
Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

_M_get_mutex()

__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex () const [protected], [noexcept], [inherited]
For use in _Safe_sequence.

_M_invalidate_if()

void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_invalidate_if (
_Predicate __pred) const [inline], [constexpr], [inherited]
Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

_M_revalidate_singular()

void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () const [protected], [inherited]
Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

_M_swap()

void __gnu_debug::_Safe_sequence_base::_M_swap (
const _Safe_sequence_base & __x) const [protected], [noexcept], [inherited]
Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

_M_transfer_from_if()

void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_transfer_from_if (
const _Safe_sequence< _SafeSequence > & __from,
_Predicate __pred) const [inherited]
Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.
References _M_iterators.

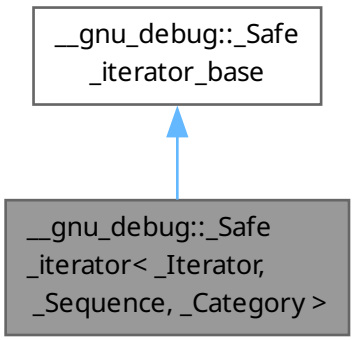
6.149.3 Member Data Documentation

_M_const_iterators

_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [mutable], [inherited]
The list of constant iterators that reference this container.

_M_iterators

_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [mutable], [inherited]
The list of mutable iterators that reference this container.
Referenced by _M_transfer_from_if().



_M_version

unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]
The container version number. This number may never be 0.
The documentation for this class was generated from the following file:

- debug/forward_list

6.150.1 Detailed Description

template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
class __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >

Safe iterator wrapper.
The class template _Safe_iterator is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In additional to the basic iterator operations (which are validated, and then passed to the underlying iterator), _Safe_iterator has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.
Note that _Iterator must be the first base class so that it gets initialized before the iterator is being attached to the container's list of iterators and it is being detached before _Iterator get destroyed. Otherwise it would result in a data race.

6.150.2 Constructor & Destructor Documentation

_Safe_iterator() [1/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator ()  [inline], [constexpr], [noexcept]
```

Postcondition

the iterator is singular and unattached

_Safe_iterator() [2/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            _Iterator __i,
            const _Safe_sequence_base * __seq)  [inline], [constexpr], [noexcept]
```

Safe iterator construction from an unsafe iterator and its sequence.

Precondition

`seq` is not NULL

Postcondition

this is not singular

_Safe_iterator() [3/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            const _Safe_iterator< _Iterator, _Sequence, _Category > & __x)  [inline], [constexpr],
[noexcept]
```

Copy construction.

_Safe_iterator() [4/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            _Safe_iterator< _Iterator, _Sequence, _Category > && __x)  [inline], [constexpr],
[noexcept]
```

Move construction.

Postcondition

__x is singular and unattached

_Safe_iterator() [5/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
template<typename _MutableIterator>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            const _Safe_iterator< _MutableIterator, _Sequence, typename __gnu_cxx::__enable_if<
_IsConstant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _Category
>::__type > & __x)  [inline], [constexpr], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.

6.150.3 Member Function Documentation

_M_attach() [1/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach (
            const _Safe_sequence_base * __seq)  [inline]
```

Attach iterator to the given sequence.

Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m
__gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator
and __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=().

_M_attach() [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.
References _M_attach().
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach(), and _M_attach().

_M_attach_single() [1/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach_single (
            const _Safe_sequence_base * __seq)  [inline]
```

Likewise, but not thread-safe.

_M_attach_single() [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.
References _M_attach_single().
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach_single(), and _M_attach_single().

_M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
            const _Safe_sequence_base * __seq) const  [inline], [inherited]
```

Determines if we are attached to the given sequence.
References _M_attached_to(), and _M_sequence.
Referenced by _M_attached_to().

_M_before_dereferenceable()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_before_dereferenceable ()
const  [inline]
```

Is the iterator before a dereferenceable one?

_M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
            const _Safe_iterator_base & __x) const  [noexcept], [inherited]
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.
References _Safe_iterator_base(), and _M_can_compare().
Referenced by _M_can_compare().

_M_dereferenceable()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable () const
[inline]
```

Is the iterator dereferenceable?
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator*(), and __gnu_debug::_Safe_iterator< _Base_iterator, m

_M_detach()

```
void __gnu_debug::_Safe_iterator_base::_M_detach () [protected], [inherited]
```

Detach the iterator for whatever sequence it is attached to, if any.
References _M_detach().
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), _M_detach(), __gnu_debug::_Safe_iterator< _Ba
and __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=().

_M_detach_single()

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single () [noexcept], [inherited]
```

Likewise, but not thread-safe.

_M_get_mutex()

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex () [protected], [noexcept],
[inherited]
```

For use in _Safe_iterator.

__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_incrementable()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable () const
[inline]
```

Is the iterator incrementable?
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_before_dereferenceable(), __gnu_debug::_Safe_iterator< _Ba
and __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++().

_M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline], [inherited]
```

Invalidate the iterator, making it singular.
References _M_invalidate(), and _M_version.
Referenced by _M_invalidate().

_M_is_before_begin()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_before_begin () const
[inline]
```

Is this iterator equal to the sequence's before_begin() iterator if any?
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_dereferenceable().

_M_is_begin()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_begin () const  [inline],
[constexpr]
```

Is this iterator equal to the sequence's begin() iterator?

_M_is_beginnest()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_beginnest () const
[inline]
```

Is this iterator equal to the sequence's before_begin() iterator if any or begin() otherwise?

_M_is_end()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↩
traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_end () const  [inline]
```

Is this iterator equal to the sequence's end() iterator?

Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_dereferenceable(), and __gnu_debug::_Safe_iterator< _Base_

_M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ()  [noexcept], [inherited]
```

Reset all member variables

_M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const  [noexcept], [inherited]
```

Is this iterator singular?

Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m

[noexcept]
```

Copy assignment.

6.150.4 Member Data Documentation

_M_next

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next  [inherited]
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.

Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M and _M_unlink().

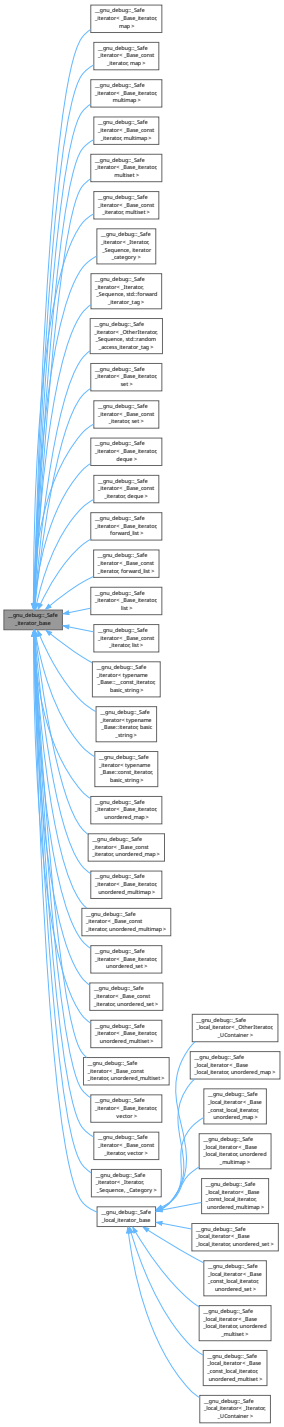
_M_prior

_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior [inherited]
Pointer to the previous iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M and _M_unlink().

_M_sequence

const _Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence [inherited]
The sequence this iterator references; may be NULL to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as const.
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), _M_attached_to(), __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_version



unsigned int __gnu_debug::_Safe_iterator_base::_M_version [inherited]
The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by _M_sequence for the iterator to be non-singular.
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), _M_invalidate(), and __gnu_debug::_Safe_sequence

6.151.1 Detailed Description

Basic functionality for a *safe* iterator.
The _Safe_iterator_base base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.
This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

6.151.2 Constructor & Destructor Documentation

_Safe_iterator_base() [1/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base ()  [inline], [constexpr], [protected]
```

Initializes the iterator and makes it singular.
References _M_next, _M_prior, _M_sequence, and _M_version.
Referenced by _Safe_iterator_base(), and _M_can_compare().

_Safe_iterator_base() [2/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
            const _Safe_sequence_base * __seq,
            bool __constant)  [inline], [constexpr], [protected]
```

Initialize the iterator to reference the sequence pointed to by __seq. __constant is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that __seq may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference __seq and be nonsingular.
References _M_attach(), _M_next, _M_prior, _M_sequence, and _M_version.

_Safe_iterator_base() [3/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
            const _Safe_iterator_base & __x,
            bool __constant)  [inline], [constexpr], [protected]
```

Initializes the iterator to reference the same sequence that __x does. __constant is true if this is a constant iterator, and false if it is mutable.
References _Safe_iterator_base(), _M_attach(), _M_next, _M_prior, _M_sequence, and _M_version.

6.151.3 Member Function Documentation

_M_attach()

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.
References _M_attach().
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach(), and _M_attach().

_M_attach_single()

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected], [noexcept]
```

Likewise, but not thread-safe.
References _M_attach_single().
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach_single(), and _M_attach_single().

_M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
            const _Safe_sequence_base * __seq) const  [inline]
```

Determines if we are attached to the given sequence.
References _M_attached_to(), and _M_sequence.
Referenced by _M_attached_to().

_M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
            const _Safe_iterator_base & __x) const  [noexcept]
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.
References _Safe_iterator_base(), and _M_can_compare().
Referenced by _M_can_compare().

_M_detach()

```
void __gnu_debug::_Safe_iterator_base::_M_detach ()  [protected]
```

Detach the iterator for whatever sequence it is attached to, if any.
References _M_detach().
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), _M_detach(), __gnu_debug::_Safe_iterator< _Ba
and __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=().

_M_detach_single()

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single ()  [noexcept]
```
Likewise, but not thread-safe.

_M_get_mutex()

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ()  [protected], [noexcept]
```
For use in _Safe_iterator.
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++(), __gnu_debug::_Safe_local_iterator< _OtherIterator,
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(),
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate ()  [inline]
```
Invalidate the iterator, making it singular.
References _M_invalidate(), and _M_version.
Referenced by _M_invalidate().

_M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ()  [noexcept]
```
Reset all member variables

_M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const  [noexcept]
```
Is this iterator singular?
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m
__gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContaine
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_iterator< _Other
__gnu_debug::__check_singular_aux(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_dereferenceable(),
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_dereferenceable(), __gnu_debug::_Safe_iterator< _Base_itera
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_incrementable(), __gnu_debug::_Safe_iterator< _Base_iterato
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().

_M_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink ()  [inline], [noexcept]
```
Unlink itself
References _M_next, _M_prior, and _M_unlink().
Referenced by _M_unlink().

6.151.4 Member Data Documentation

_M_next

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next
```
Pointer to the next iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M
and _M_unlink().

_M_prior

_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior

Pointer to the previous iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.

Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M and _M_unlink().

_M_sequence

const _Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence

The sequence this iterator references; may be NULL to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as const.

Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), _M_attached_to(), __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_version

unsigned int __gnu_debug::_Safe_iterator_base::_M_version

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by _M_sequence for the iterator to be non-singular.

6.152.1 Detailed Description

template<typename _Iterator, typename _UContainer>
class __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >

Safe iterator wrapper.
The class template _Safe_local_iterator is a wrapper around an iterator that tracks the iterator's movement among unordered containers and checks that operations performed on the "safe" iterator are legal. In additional to the basic iterator operations (which are validated, and then passed to the underlying iterator), _Safe_local_iterator has member functions for iterator invalidation, attaching/detaching the iterator from unordered containers, and querying the iterator's state.

6.152.2 Constructor & Destructor Documentation

_Safe_local_iterator() [1/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator ()  [inline],
[noexcept]
```

Postcondition

the iterator is singular and unattached

_Safe_local_iterator() [2/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
            _Iterator __i,
            const _Safe_unordered_container_base * __cont)  [inline]
```

Safe iterator construction from an unsafe iterator and its unordered container.

Precondition

`cont` is not NULL

Postcondition

this is not singular

_Safe_local_iterator() [3/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
            const _Safe_local_iterator< _Iterator, _UContainer > & __x)  [inline], [noexcept]
```

Copy construction.

_Safe_local_iterator() [4/5]

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
            _Safe_local_iterator< _Iterator, _UContainer > && __x)  [inline], [noexcept]
```

Move construction.

Postcondition

__x is singular and unattached

_Safe_local_iterator() [5/5]

```
template<typename _Iterator, typename _UContainer>
template<typename _MutableIterator>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_Safe_local_iterator (
            const _Safe_local_iterator< _MutableIterator, typename __gnu_cxx::__enable_if< _↩
IsConstant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _UContainer
>::__type > & __x)  [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.

6.152.3 Member Function Documentation

_M_attach() [1/3]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

References _M_attach().

Referenced by _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach(), and _M_attach().

_M_attach() [2/3]

```
template<typename _Iterator, typename _UContainer>
void __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_attach (
            const _Safe_unordered_container_base * __cont)  [inline]
```

Attach iterator to the given unordered container.

Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_it
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_iterator< _Other
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().

_M_attach() [3/3]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
            const _Safe_unordered_container_base * __cont,
            bool __constant)  [protected], [inherited]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by _Safe_local_iterator_base(), _Safe_local_iterator_base(), and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UCon

_M_attach_single() [1/3]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.

References _M_attach_single().

Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach_single(), and _M_attach_single().

_M_attach_single() [2/3]

```
template<typename _Iterator, typename _UContainer>
void __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_attach_single (
            const _Safe_unordered_container_base * __cont)  [inline]
```

Likewise, but not thread-safe.

_M_attach_single() [3/3]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
            const _Safe_unordered_container_base * __cont,
            bool __constant)  [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.
Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_attach_single().

_M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
            const _Safe_sequence_base * __seq) const  [inline], [inherited]
```

Determines if we are attached to the given sequence.
References _M_attached_to(), and _M_sequence.
Referenced by _M_attached_to().

_M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
            const _Safe_iterator_base & __x) const  [noexcept], [inherited]
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.
References _Safe_iterator_base(), and _M_can_compare().
Referenced by _M_can_compare().

_M_dereferenceable()

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_dereferenceable () const
[inline]
```

Is the iterator dereferenceable?
Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator*(), and __gnu_debug::_Safe_local_iterator<

_M_detach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach ()  [protected], [inherited]
```

Detach the iterator for whatever container it is attached to, if any.
Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_it
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().

_M_detach_single()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ()  [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.

_M_get_mutex()

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ()  [protected], [noexcept],
[inherited]
```

For use in _Safe_iterator.
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++(), __gnu_debug::_Safe_local_iterator< _OtherIterator,
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(),
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_in_same_bucket()

```
template<typename _Iterator, typename _UContainer>
template<typename _Other>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_in_same_bucket (
             const _Safe_local_iterator< _Other, _UContainer > & __other) const  [inline]
```

Is this iterator part of the same bucket as the other one?

_M_incrementable()

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_incrementable () const  [inline]
```

Is the iterator incrementable?
Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator++(), and __gnu_debug::_Safe_local_iterato

_M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate ()  [inline], [inherited]
```

Invalidate the iterator, making it singular.
References _M_invalidate(), and _M_version.
Referenced by _M_invalidate().

_M_is_begin()

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_is_begin () const  [inline]
```

Is this iterator equal to the container's begin(bucket) iterator?

_M_is_end()

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_is_end () const  [inline]
```

Is this iterator equal to the container's end(bucket) iterator?
Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_dereferenceable(), and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_incrementable().

_M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ()  [noexcept], [inherited]
```

Reset all member variables

_M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const  [noexcept], [inherited]
```

Is this iterator singular?
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m
__gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContaine

__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_dereferenceable(), __gnu_debug::_Safe_iterator< _Base_itera
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_incrementable(), __gnu_debug::_Safe_iterator< _Base_iterator
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().

_M_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink ()  [inline], [noexcept], [inherited]
```

Unlink itself

References _M_next, _M_prior, and _M_unlink().

Referenced by _M_unlink().

_M_value_initialized()

```
template<typename _Iterator, typename _UContainer>
bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_M_value_initialized () const
[inline]
```

Is the iterator value-initialized?

Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_it
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_iterator< _Other
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().

_S_constant()

```
template<typename _Iterator, typename _UContainer>
constexpr bool __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::_S_constant ()  [inline],
[static], [constexpr]
```

Determine if this is a constant iterator.

Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_attach(), and __gnu_debug::_Safe_local_iterator

base()

```
template<typename _Iterator, typename _UContainer>
_Iterator & __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::base ()  [inline], [noexcept]
```

Return the underlying iterator.

Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_it
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_is_end(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::bucket(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UCo
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator++(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

bucket()

```
template<typename _Iterator, typename _UContainer>
size_type __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::bucket () const  [inline]
```

Return the bucket.

Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_in_same_bucket(), __gnu_debug::_Safe_local_it
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_is_end().

operator _Iterator()

```
template<typename _Iterator, typename _UContainer>
__gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator _Iterator () const  [inline]
```

Conversion to underlying non-debug iterator to allow better interaction with non-debug containers.

operator*()

```
template<typename _Iterator, typename _UContainer>
reference __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator* () const  [inline]
```

Iterator dereference.

Precondition

iterator is dereferenceable

operator++() [1/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator & __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator++ ()
[inline]
```

Iterator preincrement.

Precondition

iterator is incrementable

operator++() [2/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator++ (
            int )  [inline]
```

Iterator postincrement.

Precondition

iterator is incrementable

operator->()

```
template<typename _Iterator, typename _UContainer>
pointer __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator-> () const  [inline]
```

Iterator dereference.

Precondition

iterator is dereferenceable

operator=() [1/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator & __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator= (
            _Safe_local_iterator< _Iterator, _UContainer > && __x)  [inline], [noexcept]
```

Move assignment.

Postcondition

__x is singular and unattached

operator=() [2/2]

```
template<typename _Iterator, typename _UContainer>
_Safe_local_iterator & __gnu_debug::_Safe_local_iterator< _Iterator, _UContainer >::operator= (
            const _Safe_local_iterator< _Iterator, _UContainer > & __x)  [inline]
```

Copy assignment.

6.152.4 Member Data Documentation

_M_next

_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next [inherited]
Pointer to the next iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M
and _M_unlink().

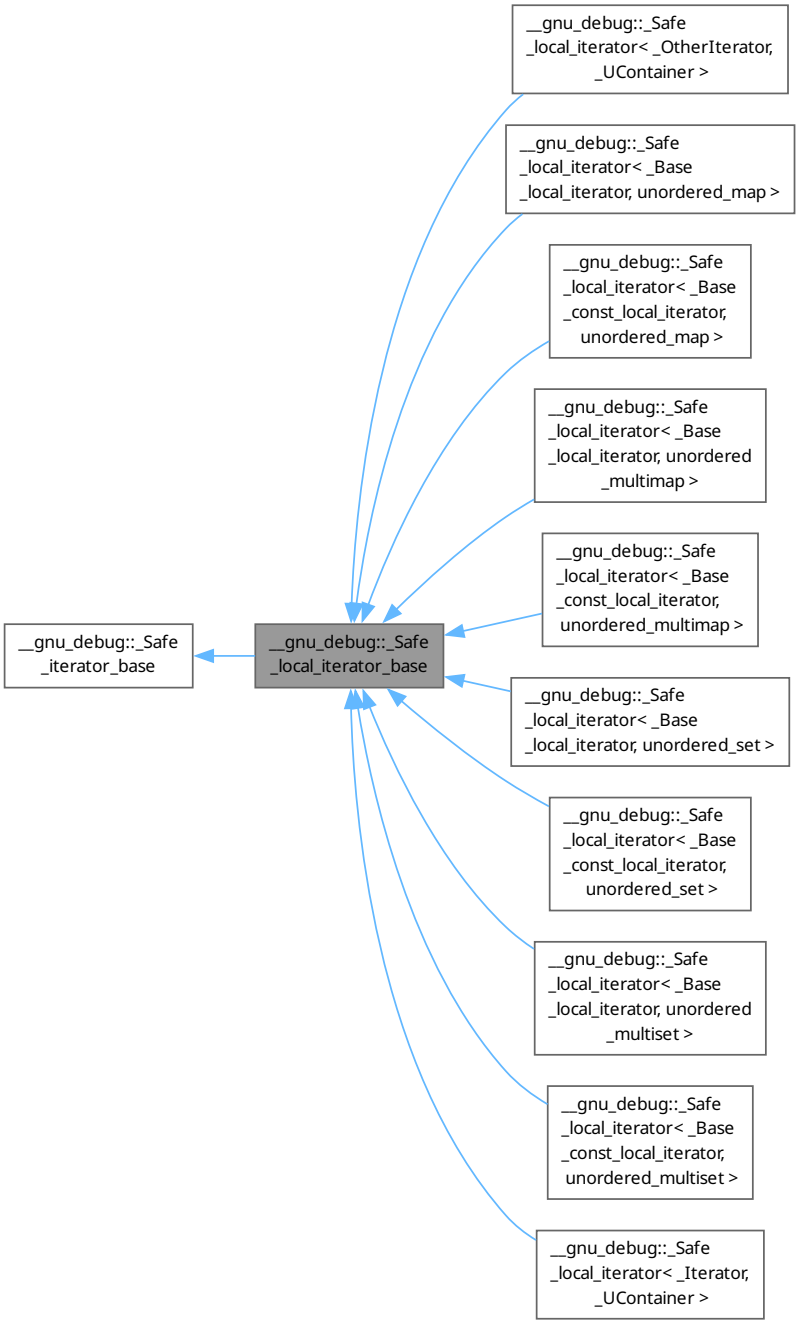
_M_prior

_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior [inherited]
Pointer to the previous iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M
and _M_unlink().

_M_sequence

const _Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence [inherited]
The sequence this iterator references; may be NULL to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as const.
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m
__gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), _Safe_iterator_base(), _Safe_iterator_base(),
_Safe_iterator_base(), _M_attached_to(), __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if(),
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(),
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_version



unsigned int __gnu_debug::_Safe_iterator_base::_M_version [inherited]
The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by _M_sequence for the iterator to be non-singular.
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), _M_invalidate(), and __gnu_debug::_Safe_sequence
The documentation for this class was generated from the following files:

- formatter.h
- safe_local_iterator.h
- safe_local_iterator.tcc

6.153.1 Detailed Description

Basic functionality for a *safe* iterator.
The _Safe_local_iterator_base base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.
This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

6.153.2 Constructor & Destructor Documentation

_Safe_local_iterator_base() [1/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base ()  [inline], [protected]
```

Initializes the iterator and makes it singular.
Referenced by _Safe_local_iterator_base().

_Safe_local_iterator_base() [2/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
            const _Safe_unordered_container_base * __seq,
            bool __constant)  [inline], [protected]
```

Initialize the iterator to reference the container pointed to by __seq. __constant is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that __seq may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference __seq and be nonsingular.
References _M_attach().

_Safe_local_iterator_base() [3/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
            const _Safe_local_iterator_base & __x,
            bool __constant)  [inline], [protected]
```

Initializes the iterator to reference the same container that __x does. __constant is true if this is a constant iterator, and false if it is mutable.
References _Safe_local_iterator_base(), and _M_attach().

6.153.3 Member Function Documentation

_M_attach() [1/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.
References _M_attach().
Referenced by _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach(), and _M_attach().

_M_attach() [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
            const _Safe_unordered_container_base * __cont,
            bool __constant)  [protected]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.
Referenced by _Safe_local_iterator_base(), _Safe_local_iterator_base(), and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UCon

_M_attach_single() [1/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
            const _Safe_sequence_base * __seq,
            bool __constant)  [protected], [noexcept], [inherited]
```

Likewise, but not thread-safe.
References _M_attach_single().
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_attach_single(), and _M_attach_single().

_M_attach_single() [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
            const _Safe_unordered_container_base * __cont,
            bool __constant)  [protected], [noexcept]
```

Likewise, but not thread-safe.
Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_attach_single().

_M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
            const _Safe_sequence_base * __seq) const  [inline], [inherited]
```

Determines if we are attached to the given sequence.
References _M_attached_to(), and _M_sequence.
Referenced by _M_attached_to().

_M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
            const _Safe_iterator_base & __x) const  [noexcept], [inherited]
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.
References _Safe_iterator_base(), and _M_can_compare().
Referenced by _M_can_compare().

_M_detach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach ()  [protected]
```

Detach the iterator for whatever container it is attached to, if any.
Referenced by __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_ite
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().

_M_detach_single()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ()  [protected], [noexcept]
```

Likewise, but not thread-safe.

_M_get_mutex()

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ()  [protected], [noexcept],
[inherited]
```

For use in _Safe_iterator.
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++(), __gnu_debug::_Safe_local_iterator< _OtherIterator,
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(),
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate ()  [inline], [inherited]
```

Invalidate the iterator, making it singular.
References _M_invalidate(), and _M_version.
Referenced by _M_invalidate().

_M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ()  [noexcept], [inherited]
```

Reset all member variables

_M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const  [noexcept], [inherited]
```

Is this iterator singular?
Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m
__gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContaine
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_Safe_local_iterator(), __gnu_debug::_Safe_local_iterator< _Other
__gnu_debug::__check_singular_aux(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::_M_dereferenceable(),
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_dereferenceable(), __gnu_debug::_Safe_iterator< _Base_itera
__gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::_M_incrementable(), __gnu_debug::_Safe_iterator< _Base_iterator
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().

_M_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink () [inline], [noexcept], [inherited]
```

Unlink itself

References _M_next, _M_prior, and _M_unlink().

Referenced by _M_unlink().

6.153.4 Member Data Documentation

_M_next

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next [inherited]
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.

Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M and _M_unlink().

_M_prior

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior [inherited]
```

Pointer to the previous iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.

Referenced by _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), __gnu_debug::_Safe_sequence< _Sequence >::_M and _M_unlink().

_M_sequence

```
const _Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence [inherited]
```

The sequence this iterator references; may be NULL to indicate a singular iterator. Stored as pointer-to-const because sequence could be declared as const.

Referenced by __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), __gnu_debug::_Safe_iterator< _Base_iterator, m __gnu_debug::_Safe_iterator< _Base_iterator, map >::_Safe_iterator(), _Safe_iterator_base(), _Safe_iterator_base(), _Safe_iterator_base(), _M_attached_to(), __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=(), and __gnu_debug::_Safe_local_iterator< _OtherIterato

_M_version

```
unsigned int __gnu_debug::_Safe_iterator_base::_M_version [inherited]
```

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by _M_sequence for the iterator to be non-singular.

6.154.1 Detailed Description

template<typename _Sequence>
class __gnu_debug::_Safe_node_sequence< _Sequence >

Like _Safe_sequence but with a special _M_invalidate_all implementation not invalidating past-the-end iterators. Used by node based sequence.

6.154.2 Member Function Documentation

_M_detach_all()

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () const  [protected], [inherited]
```

Detach all iterators, leaving them singular.
Referenced by ~_Safe_sequence_base().

_M_detach_singular()

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () const  [protected], [inherited]
```

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

_M_get_mutex()

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex () const  [protected], [noexcept],
[inherited]
```

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

_M_invalidate_if()

```
template<typename _Sequence>
template<typename _Predicate>
void __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if (
            _Predicate __pred) const  [inline], [constexpr], [inherited]
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

_M_revalidate_singular()

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () const  [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

_M_swap()

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
            const _Safe_sequence_base & __x) const  [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

_M_transfer_from_if()

```
template<typename _Sequence>
template<typename _Predicate>
void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (
            const _Safe_sequence< _Sequence > & __from,
            _Predicate __pred) const  [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.
References std::__addressof(), __gnu_debug::_Safe_sequence_base::_M_const_iterators, __gnu_debug::_Safe_sequence_base::_M_ge __gnu_debug::_Safe_sequence_base::_M_iterators, __gnu_debug::_Safe_iterator_base::_M_next, __gnu_debug::_Safe_iterator_base::_ __gnu_debug::_Safe_iterator_base::_M_sequence, __gnu_debug::_Safe_iterator_base::_M_version, and __gnu_debug::_Safe_sequenc

6.154.3 Member Data Documentation

_M_const_iterators

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators  [mutable], [inherited]
```

The list of constant iterators that reference this container.

6.155.1 Detailed Description

template<typename _Sequence>
class __gnu_debug::_Safe_sequence< _Sequence >

Base class for constructing a *safe* sequence type that tracks iterators that reference it.

The class template _Safe_sequence simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template _Safe_iterator for this sequence. Iterators will then be tracked automatically.

6.155.2 Member Function Documentation

_M_detach_all()

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () const  [protected], [inherited]
```

Detach all iterators, leaving them singular.
Referenced by ~_Safe_sequence_base().

_M_detach_singular()

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () const  [protected], [inherited]
```

Detach all singular iterators.

6.156.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence.
The _Safe_sequence_base class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from _Safe_sequence_base publicly, so that safe iterators (which inherit _Safe_iterator_base) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.
This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.

6.156.2 Constructor & Destructor Documentation

~_Safe_sequence_base()

`__gnu_debug::_Safe_sequence_base::~_Safe_sequence_base () [inline], [constexpr], [protected], [noexcept]`
Notify all iterators that reference this sequence that the sequence is being destroyed.
References _M_detach_all().

_M_const_local_iterators

```
_Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators  [mutable]
```

The list of constant local iterators that reference this container.

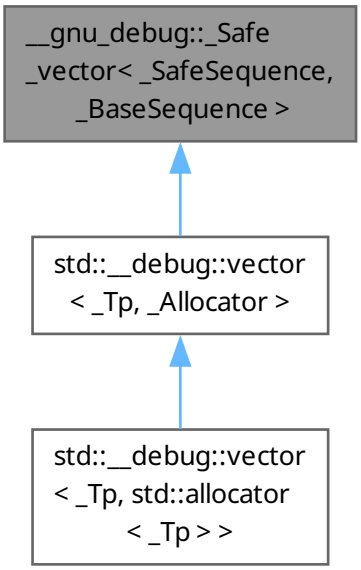
_M_iterators

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators  [mutable], [inherited]
```

The list of mutable iterators that reference this container.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

_M_local_iterators

```
_Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators  [mutable]
```
The list of mutable local iterators that reference this container.



_M_version

```
unsigned int __gnu_debug::_Safe_sequence_base::_M_version  [mutable], [inherited]
```
The container version number. This number may never be 0.
Referenced by _M_invalidate_all(), __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if(), __gnu_debug::_Safe_iterator
__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=(), __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >
and __gnu_debug::_Safe_local_iterator< _OtherIterator, _UContainer >::operator=().
The documentation for this class was generated from the following file:

- safe_unordered_base.h

6.159 __gnu_debug::_Safe_vector< _SafeSequence, _BaseSequence > Class Template Reference

```
#include <vector>
```
Inheritance diagram for __gnu_debug::_Safe_vector< _SafeSequence, _BaseSequence >:

Protected Member Functions

- constexpr **_Safe_vector** (_Safe_vector &&__x) noexcept
- constexpr **_Safe_vector** (const _Safe_vector &) noexcept
- constexpr **_Safe_vector** (size_type __n) noexcept
- bool **_M_requires_reallocation** (size_type __elements) const noexcept
- constexpr void **_M_update_guaranteed_capacity** () noexcept

- constexpr _Safe_vector & **operator=** (_Safe_vector &&__x) noexcept
- constexpr _Safe_vector & **operator=** (const _Safe_vector &) noexcept

Protected Attributes

- size_type **_M_guaranteed_capacity**

6.159.1 Detailed Description

template<typename _SafeSequence, typename _BaseSequence>
class __gnu_debug::_Safe_vector< _SafeSequence, _BaseSequence >

Base class for Debug Mode vector.
Adds information about the guaranteed capacity, which is useful for detecting code which relies on non-portable implementation details of the libstdc++ reallocation policy.
The documentation for this class was generated from the following file:

- debug/vector

6.160 __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering > Struct Template Reference

`#include <multiway_merge.h>`

Public Member Functions

- void **operator()** (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)

6.160.1 Detailed Description

template<bool __stable, class _RAIter, class _StrictWeakOrdering>
struct __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >

Stable sorting functor.
Used to reduce code instantiation in multiway_merge_sampling_splitting.
The documentation for this struct was generated from the following file:

- multiway_merge.h

6.161 __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering > Struct Template Reference

`#include <multiway_merge.h>`

Public Member Functions

- void **operator()** (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)

6.161.1 Detailed Description

template<class _RAIter, class _StrictWeakOrdering>
struct __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering >

Non-__stable sorting functor.
Used to reduce code instantiation in multiway_merge_sampling_splitting.
The documentation for this struct was generated from the following file:

- multiway_merge.h

6.162 std::__detail::_Scanner< _CharT > Class Template Reference

6.162.1 Detailed Description

template<typename _CharT>
class std::__detail::_Scanner< _CharT >

Scans an input range for regex tokens.
The _Scanner class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.

6.162.2 Member Enumeration Documentation

_TokenT

```
enum std::__detail::_ScannerBase::_TokenT : unsigned  [inherited]
```

Token types returned from the scanner.
The documentation for this class was generated from the following files:

- regex_scanner.h
- regex_scanner.tcc

6.163 __gnu_debug::_Sequence_traits< _Sequence > Struct Template Reference

6.164.1 Detailed Description

class _Settings Run-time settings for the parallel mode including all tunable parameters.

6.164.2 Member Function Documentation

get()

```
const _Settings & __gnu_parallel::_Settings::get () throw ( )   [static]
```

Get the global settings.
Referenced by __gnu_parallel::__find_template(), __gnu_parallel::__find_template(), __gnu_parallel::__find_template(), __gnu_parallel::__for_each_template_random_access_workstealing(), __gnu_parallel::__parallel_nth_element(), __gnu_parallel::__parallel_partial_sum(), __gnu_parallel::__parallel_partial_sum_linear(), __gnu_parallel::__parallel_partition(), __gnu_parallel::__parallel_random_shuffle_drs(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort_qs_conquer(), __gnu_parallel::__qsb_local_sort_with_helping(), __gnu_parallel::__sequential_random_s __gnu_parallel::multiway_merge_sampling_splitting(), __gnu_parallel::parallel_multiway_merge(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

set()

```
void __gnu_parallel::_Settings::set (
            _Settings & ) throw ( )   [static]
```

Set the global settings.
References accumulate_minimal_n, adjacent_difference_minimal_n, cache_line_size, count_minimal_n, fill_minimal_n, find_increasing_factor, find_initial_block_size, find_maximum_block_size, find_scale_factor, find_sequential_search_size, for_each_minimal_n, generate_minimal_n, L1_cache_size, L2_cache_size, max_element_minimal_n, merge_minimal_n, merge_oversampling, min_element_minimal_n, multiway_merge_minimal_k, multiway_merge_minimal_n, multiway_merge_oversampling nth_element_minimal_n, partial_sort_minimal_n, partial_sum_dilation, partial_sum_minimal_n, partition_chunk_share, partition_chunk_size, partition_minimal_n, qsb_steals, random_shuffle_minimal_n, replace_minimal_n, search_minimal_n, set(), set_difference_minimal_n, set_intersection_minimal_n, set_symmetric_difference_minimal_n, set_union_minimal_n, sort_minimal_n, sort_mwms_oversampling, sort_qs_num_samples_preset, sort_qsb_base_case_maximal_n, TLB_size, transform_minimal_n, and unique_copy_minimal_n.
Referenced by set().

6.164.3 Member Data Documentation

accumulate_minimal_n

```
_SequenceIndex __gnu_parallel::_Settings::accumulate_minimal_n
```

Minimal input size for accumulate.
Referenced by set().

adjacent_difference_minimal_n

```
unsigned int __gnu_parallel::_Settings::adjacent_difference_minimal_n
```

Minimal input size for adjacent_difference.
Referenced by set().

cache_line_size

```
unsigned int __gnu_parallel::_Settings::cache_line_size
```

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing(), and set().

count_minimal_n

_SequenceIndex __gnu_parallel::_Settings::count_minimal_n
Minimal input size for count and count_if.
Referenced by set().

fill_minimal_n

_SequenceIndex __gnu_parallel::_Settings::fill_minimal_n
Minimal input size for fill.
Referenced by set().

find_increasing_factor

double __gnu_parallel::_Settings::find_increasing_factor
Block size increase factor for find.
Referenced by set().

find_initial_block_size

_SequenceIndex __gnu_parallel::_Settings::find_initial_block_size
Initial block size for find.
Referenced by __gnu_parallel::__find_template(), and set().

find_maximum_block_size

_SequenceIndex __gnu_parallel::_Settings::find_maximum_block_size
Maximal block size for find.
Referenced by set().

find_scale_factor

float __gnu_parallel::_Settings::find_scale_factor
Block size scale-down factor with respect to current position.
Referenced by __gnu_parallel::__find_template(), and set().

find_sequential_search_size

_SequenceIndex __gnu_parallel::_Settings::find_sequential_search_size
Start with looking for this many elements sequentially, for find.
Referenced by __gnu_parallel::__find_template(), __gnu_parallel::__find_template(), and set().

for_each_minimal_n

_SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n
Minimal input size for for_each.
Referenced by set().

generate_minimal_n

_SequenceIndex __gnu_parallel::_Settings::generate_minimal_n
Minimal input size for generate.
Referenced by set().

L1_cache_size

`unsigned long long __gnu_parallel::_Settings::L1_cache_size`
size of the L1 cache in bytes (underestimation).
Referenced by set().

L2_cache_size

`unsigned long long __gnu_parallel::_Settings::L2_cache_size`
size of the L2 cache in bytes (underestimation).
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), __gnu_parallel::__sequential_random_shuffle(), and set().

max_element_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::max_element_minimal_n`
Minimal input size for max_element.
Referenced by set().

merge_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::merge_minimal_n`
Minimal input size for merge.
Referenced by set().

merge_oversampling

`unsigned int __gnu_parallel::_Settings::merge_oversampling`
Oversampling factor for merge.
Referenced by __gnu_parallel::multiway_merge_sampling_splitting(), __gnu_parallel::parallel_multiway_merge(), and set().

min_element_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::min_element_minimal_n`
Minimal input size for min_element.
Referenced by set().

multiway_merge_minimal_k

`int __gnu_parallel::_Settings::multiway_merge_minimal_k`
Oversampling factor for multiway_merge.
Referenced by set().

multiway_merge_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::multiway_merge_minimal_n`
Minimal input size for multiway_merge.
Referenced by set().

multiway_merge_oversampling

`unsigned int __gnu_parallel::_Settings::multiway_merge_oversampling`
Oversampling factor for multiway_merge.
Referenced by set().

nth_element_minimal_n

_SequenceIndex __gnu_parallel::_Settings::nth_element_minimal_n
Minimal input size for nth_element.
Referenced by __gnu_parallel::__parallel_nth_element(), and set().

partial_sort_minimal_n

_SequenceIndex __gnu_parallel::_Settings::partial_sort_minimal_n
Minimal input size for partial_sort.
Referenced by set().

partial_sum_dilation

float __gnu_parallel::_Settings::partial_sum_dilation
Ratio for partial_sum. Assume "sum and write result" to be this factor slower than just "sum".
Referenced by __gnu_parallel::__parallel_partial_sum_linear(), and set().

partial_sum_minimal_n

unsigned int __gnu_parallel::_Settings::partial_sum_minimal_n
Minimal input size for partial_sum.
Referenced by set().

partition_chunk_share

double __gnu_parallel::_Settings::partition_chunk_share
Chunk size for partition, relative to input size. If > 0.0, this value overrides partition_chunk_size.
Referenced by __gnu_parallel::__parallel_partition(), and set().

partition_chunk_size

_SequenceIndex __gnu_parallel::_Settings::partition_chunk_size
Chunk size for partition.
Referenced by __gnu_parallel::__parallel_partition(), and set().

partition_minimal_n

_SequenceIndex __gnu_parallel::_Settings::partition_minimal_n
Minimal input size for partition.
Referenced by __gnu_parallel::__parallel_nth_element(), and set().

qsb_steals

_SequenceIndex __gnu_parallel::_Settings::qsb_steals
The number of stolen ranges in load-balanced quicksort.
Referenced by set().

random_shuffle_minimal_n

unsigned int __gnu_parallel::_Settings::random_shuffle_minimal_n
Minimal input size for random_shuffle.
Referenced by set().

replace_minimal_n

_SequenceIndex __gnu_parallel::_Settings::replace_minimal_n
Minimal input size for replace and replace_if.
Referenced by set().

search_minimal_n

_SequenceIndex __gnu_parallel::_Settings::search_minimal_n
Minimal input size for search and search_n.
Referenced by set().

set_difference_minimal_n

_SequenceIndex __gnu_parallel::_Settings::set_difference_minimal_n
Minimal input size for set_difference.
Referenced by set().

set_intersection_minimal_n

_SequenceIndex __gnu_parallel::_Settings::set_intersection_minimal_n
Minimal input size for set_intersection.
Referenced by set().

set_symmetric_difference_minimal_n

_SequenceIndex __gnu_parallel::_Settings::set_symmetric_difference_minimal_n
Minimal input size for set_symmetric_difference.
Referenced by set().

set_union_minimal_n

_SequenceIndex __gnu_parallel::_Settings::set_union_minimal_n
Minimal input size for set_union.
Referenced by set().

sort_minimal_n

_SequenceIndex __gnu_parallel::_Settings::sort_minimal_n
Minimal input size for parallel sorting.
Referenced by set().

sort_mwms_oversampling

unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling
Oversampling factor for parallel std::sort (MWMS).
Referenced by __gnu_parallel::parallel_sort_mwms(), __gnu_parallel::parallel_sort_mwms_pu(), and set().

sort_qs_num_samples_preset

unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_preset
Such many samples to take to find a good pivot (quicksort).
Referenced by set().

sort_qsb_base_case_maximal_n

_SequenceIndex __gnu_parallel::_Settings::sort_qsb_base_case_maximal_n
Maximal subsequence __length to switch to unbalanced __base case. Applies to std::sort with dynamically load-balanced quicksort.
Referenced by __gnu_parallel::__qsb_local_sort_with_helping(), and set().

TLB_size

unsigned int __gnu_parallel::_Settings::TLB_size
size of the Translation Lookaside Buffer (underestimation).
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), __gnu_parallel::__sequential_random_shuffle(), and set().

transform_minimal_n

_SequenceIndex __gnu_parallel::_Settings::transform_minimal_n
Minimal input size for parallel std::transform.
Referenced by set().

unique_copy_minimal_n

_SequenceIndex __gnu_parallel::_Settings::unique_copy_minimal_n
Minimal input size for unique_copy.
Referenced by set().

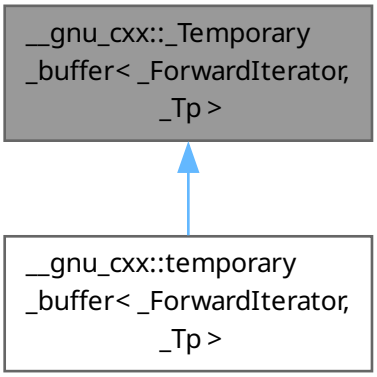
- bool **operator==** (const _Std_pointer_impl &__rarg) const
- void **set** (element_type *__arg)

6.171.1 Detailed Description



template<typename _Tp>
class __gnu_cxx::_Std_pointer_impl< _Tp >

A storage policy for use with _Pointer_adapter<> which yields a standard pointer.
A _Storage_policy is required to provide 4 things: 1) A get() API for returning the stored pointer value. 2) An set() API for storing a pointer value. 3) An element_type typedef to define the type this points to. 4) An operator<() to support pointer comparison. 5) An operator==() to support pointer comparison.
The documentation for this class was generated from the following file:

- pointer.h

6.172 __gnu_cxx::_Temporary_buffer< _ForwardIterator, _Tp > Class Template Reference

`#include <stl_tempbuf.h>`
Inheritance diagram for __gnu_cxx::_Temporary_buffer< _ForwardIterator, _Tp >:

Public Types

- typedef pointer **iterator**
- typedef value_type * **pointer**

- iterator begin ()
- iterator end ()
- size_type size () const

Protected Attributes

- struct std::_Temporary_buffer::_Impl **_M_impl**
- size_type **_M_original_len**

6.172.1 Detailed Description

template<typename _ForwardIterator, typename _Tp>
class __gnu_cxx::_Temporary_buffer< _ForwardIterator, _Tp >

This class is used in two places: stl_algo.h and ext/memory, where it is wrapped as the temporary_buffer class. See temporary_buffer docs for more notes.

6.172.2 Constructor & Destructor Documentation

_Temporary_buffer()

```
template<typename _ForwardIterator, typename _Tp>
std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer (
            _ForwardIterator __seed,
            size_type __original_len)
```

Constructs a temporary buffer of a size somewhere between zero and the given length.

6.172.3 Member Function Documentation

_M_requested_size()

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::_M_requested_size () const  [inline]
```

Returns the size requested by the constructor; may be >size().

begin()

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ()  [inline]
```

As per Table mumble.

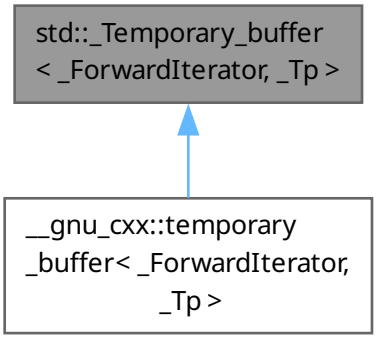
end()

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end ()  [inline]
```

As per Table mumble.

size()

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size () const  [inline]
```



As per Table mumble.
The documentation for this class was generated from the following file:

- stl_tempbuf.h

6.173 std::_Temporary_buffer< _ForwardIterator, _Tp > Class Template Reference

```
#include <stl_tempbuf.h>
```

Protected Attributes

- struct std::_Temporary_buffer::_Impl **_M_impl**
- size_type **_M_original_len**

6.173.1 Detailed Description

template<typename _ForwardIterator, typename _Tp>
class std::_Temporary_buffer< _ForwardIterator, _Tp >

This class is used in two places: stl_algo.h and ext/memory, where it is wrapped as the temporary_buffer class. See temporary_buffer docs for more notes.

6.173.2 Constructor & Destructor Documentation

_Temporary_buffer()

```
template<typename _ForwardIterator, typename _Tp>
std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer (
```

```
_ForwardIterator __seed,
size_type __original_len)
```

Constructs a temporary buffer of a size somewhere between zero and the given length.
References begin(), and end().
Referenced by __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >::temporary_buffer().

6.173.3 Member Function Documentation

_M_requested_size()

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::_M_requested_size () const  [inline]
```

Returns the size requested by the constructor; may be >size().

begin()

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ()  [inline]
```

As per Table mumble.
Referenced by _Temporary_buffer().

end()

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end ()  [inline]
```

As per Table mumble.
Referenced by _Temporary_buffer().

size()

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size () const  [inline]
```

As per Table mumble.
The documentation for this class was generated from the following file:

- stl_tempbuf.h

6.174 __gnu_cxx::_Unqualified_type< _Tp > Struct Template Reference

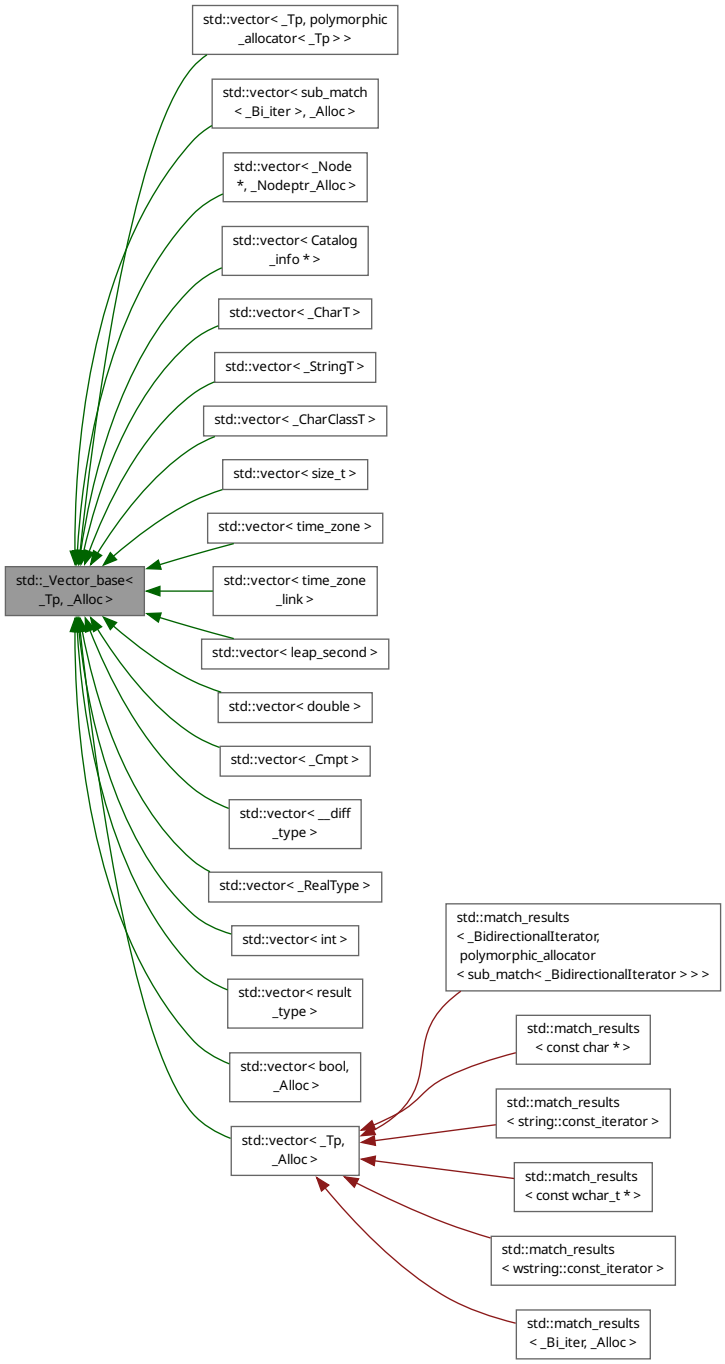
```
#include <pointer.h>
```

Public Types

- typedef _Tp **type**

6.174.1 Detailed Description

template<typename _Tp>
struct __gnu_cxx::_Unqualified_type< _Tp >



This structure accommodates the way in which std::iterator_traits<> is normally specialized for const T*, so that value_type is still T.
The documentation for this struct was generated from the following file:

- pointer.h

6.175 std::_Vector_base< _Tp, _Alloc > Struct Template Reference

6.182.1 Detailed Description

Assume the calling thread has already obtained mutex ownership and manage it.
The documentation for this struct was generated from the following file:

- std_mutex.h

6.183 std::aligned_storage< _Len, _Align > Struct Template Reference

`#include <type_traits>`

6.183.1 Detailed Description

template<size_t _Len, size_t _Align = __aligned_storage_default_alignment(_Len)>
struct std::aligned_storage< _Len, _Align >

Aligned storage.
The member typedef `type` is be a POD type suitable for use as uninitialized storage for any object whose size is at most `_Len` and whose alignment is a divisor of `_Align`.
It is important to use the nested `type` as uninitialized storage, not the `std::aligned_storage` type itself which is an empty class with 1-byte alignment. So this is correct:
`typename std::aligned_storage<sizeof(X), alignof(X)>::type m_xobj;`
This is wrong:
`std::aligned_storage<sizeof(X), alignof(X)> m_xobj;`
In C++14 and later `std::aligned_storage_t<sizeof(X), alignof(X)>` can be used to refer to the `type` member typedef.
The default value of _Align is supposed to be the most stringent fundamental alignment requirement for any C++ object type whose size is no greater than `_Len` (see [basic.align] in the C++ standard).

Deprecated Deprecated in C++23. Uses can be replaced by an array `std::byte[_Len]` declared with `alignas(_Align)`.

The documentation for this struct was generated from the following file:

- type_traits

6.184 std::aligned_union< _Len, _Types > Struct Template Reference

`#include <type_traits>`

Public Types

6.189.1 Detailed Description

template<typename _Alloc>
struct std::allocator_traits< _Alloc >

Uniform interface to all allocator types.

Since

C++11

6.189.2 Member Typedef Documentation

allocator_type

```
template<typename _Alloc>
typedef _Alloc std::allocator_traits< _Alloc >::allocator_type
```

The allocator type.

const_pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::const_pointer
```

The allocator's const pointer type.
`Alloc::const_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const value_type>`

const_void_pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::const_void_pointer
```

The allocator's const void pointer type.
`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

difference_type

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::difference_type
```

The allocator's difference type.
`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference_type`

is_always_equal

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::is_always_equal
```

Whether all instances of the allocator type compare equal.
`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::pointer
```

The allocator's pointer type.
`Alloc::pointer` if that type exists, otherwise `value_type*`

propagate_on_container_copy_assignment

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment
```

How the allocator is propagated on copy assignment.
`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

propagate_on_container_move_assignment

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_move_assignment
```

How the allocator is propagated on move assignment.
`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

propagate_on_container_swap

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_swap
```

How the allocator is propagated on swap.
`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

size_type

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::size_type
```

The allocator's size type.

`Alloc::size_type` if that type exists, otherwise `make_unsigned<difference_type>::type`

value_type

```
template<typename _Alloc>
typedef _Alloc::value_type std::allocator_traits< _Alloc >::value_type
```

The allocated type.

void_pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::void_pointer
```

The allocator's void pointer type.
`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

6.189.3 Member Function Documentation

allocate() [1/2]

```
template<typename _Alloc>
constexpr pointer std::allocator_traits< _Alloc >::allocate (
            _Alloc & __a,
            size_type __n)  [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Calls `a.allocate(n)`

allocate() [2/2]

```
template<typename _Alloc>
constexpr pointer std::allocator_traits< _Alloc >::allocate (
            _Alloc & __a,
            size_type __n,
            const_void_pointer __hint)  [inline], [static], [nodiscard], [constexpr]
```

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

allocate_at_least()

```
template<typename _Alloc>
constexpr allocation_result< pointer, size_type > std::allocator_traits< _Alloc >::allocate_at↩
_least (
            _Alloc & __a,
            size_type __n)  [inline], [static], [nodiscard], [constexpr]
```

Allocate memory, generously.

Parameters

_↩ _*a*	An allocator.
_↩ _*n*	The minimum number of objects to allocate space for.

Returns

Memory of suitable size and alignment for `n` or more contiguous objects of type `value_type`.

Returns `a.allocate_at_least(n)` if that expression is well-formed, else `{ a.allocate(n), n }`. When an allocator is obliged to reserve more space than required for the cited `n` objects, it may deliver the extra space to the caller.

construct()

```
template<typename _Alloc>
template<typename _Tp, typename...  _Args>
constexpr void std::allocator_traits< _Alloc >::construct (
            _Alloc & __a,
            _Tp * __p,
            _Args &&...  __args)  [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Tp`.

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for Tp
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)` if that expression is well-formed, otherwise uses placement-new to construct an object of type *_Tp* at location *__p* from the arguments *__args*...

deallocate()

```
template<typename _Alloc>
constexpr void std::allocator_traits< _Alloc >::deallocate (
```

```
            _Alloc & __a,
            pointer __p,
            size_type __n)  [inline], [static], [constexpr]
```

Deallocate memory.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the memory to deallocate.
_↩ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

destroy()

```
template<typename _Alloc>
template<typename _Tp>
constexpr void std::allocator_traits< _Alloc >::destroy (
            _Alloc & __a,
            _Tp * __p)  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type *_Tp*.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

max_size()

```
template<typename _Alloc>
constexpr size_type std::allocator_traits< _Alloc >::max_size (
            const _Alloc & __a)  [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Parameters

_↩ _a	An allocator.

Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_↩ type>::max()`

select_on_container_copy_construction()

```
template<typename _Alloc>
constexpr _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction (
            const _Alloc & __rhs)  [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

`__rhs.select_on_container_copy_construction()` or *__rhs*

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns *__rhs*

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::size_type
```
The allocator's size type.

value_type

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::value_type
```
The allocated type.

void_pointer

```
template<typename _Tp>
using std::allocator_traits< allocator< _Tp > >::void_pointer
```
The allocator's void pointer type.

6.190.3 Member Function Documentation

allocate() [1/2]

```
template<typename _Tp>
constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
            allocator_type & __a,
            size_type __n)  [inline], [static], [constexpr]
```
Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Calls `a.allocate(n)`

allocate() [2/2]

```
template<typename _Tp>
constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
            allocator_type & __a,
            size_type __n,
            const_void_pointer __hint)  [inline], [static], [constexpr]
```

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)`

allocate_at_least()

```
template<typename _Tp>
constexpr allocation_result< pointer, size_type > std::allocator_traits< allocator< _Tp > >::↩
allocate_at_least (
            allocator_type & __a,
            size_type __n)  [inline], [static], [nodiscard], [constexpr]
```

Allocate memory, generously.

Parameters

_↩ _a	An allocator.
_↩ _n	The minimum number of objects to allocate space for.

Returns

Memory of suitable size and alignment for `m >= n` contiguous objects of type `value_type`, and `m`.

Returns `a.allocate_at_least(n)`.

construct()

```
template<typename _Tp>
template<typename _Up, typename... _Args>
constexpr void std::allocator_traits< allocator< _Tp > >::construct (
            allocator_type & __a,
            _Up * __p,
            _Args &&... __args)  [inline], [static], [constexpr], [noexcept]
```

Construct an object of type _Up.

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for an object of type _Up.
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...)` in C++11, C++14 and C++17. Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...)` instead. References std::_Construct(), and std::forward().

deallocate()

```
template<typename _Tp>
constexpr void std::allocator_traits< allocator< _Tp > >::deallocate (
            allocator_type & __a,
            pointer __p,
            size_type __n)  [inline], [static], [constexpr]
```

Deallocate memory.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the memory to deallocate.
_↩ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

destroy()

```
template<typename _Tp>
template<typename _Up>
constexpr void std::allocator_traits< allocator< _Tp > >::destroy (
            allocator_type & __a,
            _Up * __p)  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type *_Up*.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the object to destroy

Calls `__a.destroy(__p)`.

max_size()

```
template<typename _Tp>
constexpr size_type std::allocator_traits< allocator< _Tp > >::max_size (
            const allocator_type & __a)  [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Parameters

_↩ _a	An allocator.

Returns

```
__a.max_size()
```

select_on_container_copy_construction()

```
template<typename _Tp>
constexpr allocator_type std::allocator_traits< allocator< _Tp > >::select_on_container_copy_↩
construction (
            const allocator_type & __rhs)  [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

```
__rhs
```

The documentation for this struct was generated from the following file:

- bits/alloc_traits.h

6.191 std::allocator_traits< allocator< void > > Struct Reference

6.191.1 Detailed Description

Explicit specialization for `std::allocator<void>`.

Since

C++11

See also

std::allocator_traits

6.191.2 Member Typedef Documentation

allocator_type

```
using std::allocator_traits< allocator< void > >::allocator_type
```

The allocator type.

const_pointer

```
using std::allocator_traits< allocator< void > >::const_pointer
```

The allocator's const pointer type.

const_void_pointer

```
using std::allocator_traits< allocator< void > >::const_void_pointer
```

The allocator's const void pointer type.

difference_type

```
using std::allocator_traits< allocator< void > >::difference_type
```

The allocator's difference type.

is_always_equal

```
using std::allocator_traits< allocator< void > >::is_always_equal
```

Whether all instances of the allocator type compare equal.

pointer

```
using std::allocator_traits< allocator< void > >::pointer
```
The allocator's pointer type.

propagate_on_container_copy_assignment

```
using std::allocator_traits< allocator< void > >::propagate_on_container_copy_assignment
```
How the allocator is propagated on copy assignment.

propagate_on_container_move_assignment

```
using std::allocator_traits< allocator< void > >::propagate_on_container_move_assignment
```
How the allocator is propagated on move assignment.

propagate_on_container_swap

```
using std::allocator_traits< allocator< void > >::propagate_on_container_swap
```
How the allocator is propagated on swap.

size_type

```
using std::allocator_traits< allocator< void > >::size_type
```
The allocator's size type.

value_type

```
using std::allocator_traits< allocator< void > >::value_type
```
The allocated type.

void_pointer

```
using std::allocator_traits< allocator< void > >::void_pointer
```
The allocator's void pointer type.

6.191.3 Member Function Documentation

allocate()

```
void * std::allocator_traits< allocator< void > >::allocate (
            allocator_type & ,
            size_type ,
            const void *  = nullptr)  [static], [delete]
```
allocate is ill-formed for allocator<void>

construct()

```
template<typename _Up, typename...  _Args>
constexpr void std::allocator_traits< allocator< void > >::construct (
            allocator_type & ,
            _Up * __p,
            _Args &&...  __args)  [inline], [static], [constexpr], [noexcept]
```
Construct an object of type _Up.

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for an object of type _Up.
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...)` in C++11, C++14 and C++17. Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...)` instead.
References std::_Construct(), and std::forward().

deallocate()

```
void std::allocator_traits< allocator< void > >::deallocate (
            allocator_type & ,
            void * ,
            size_type )  [static], [delete]
```

deallocate is ill-formed for allocator<void>

destroy()

```
template<typename _Up>
constexpr void std::allocator_traits< allocator< void > >::destroy (
            allocator_type & ,
            _Up * __p)  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type _Up.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the object to destroy

Invokes the destructor for *__p.
References std::_Destroy().

max_size()

```
size_type std::allocator_traits< allocator< void > >::max_size (
            const allocator_type & )  [static], [delete]
```

max_size is ill-formed for allocator<void>

select_on_container_copy_construction()

```
constexpr allocator_type std::allocator_traits< allocator< void > >::select_on_container_copy_↩
construction (
            const allocator_type & __rhs)  [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

`__rhs`

6.192.1 Detailed Description

template<typename _Tp>
struct std::allocator_traits< pmr::polymorphic_allocator< _Tp > >

Partial specialization for `std::pmr::polymorphic_allocator`.

Since

C++17

6.192.2 Member Typedef Documentation

allocator_type

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocator_type
```

The allocator type.

const_pointer

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_pointer
```

The allocator's const pointer type.

const_void_pointer

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_void_pointer
```

The allocator's const void pointer type.

difference_type

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::difference_type
```

The allocator's difference type.

is_always_equal

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::is_always_equal
```

Whether all instances of the allocator type compare equal.

pointer

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::pointer
```

The allocator's pointer type.

propagate_on_container_copy_assignment

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_copy_↩
assignment
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

propagate_on_container_move_assignment

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_move_↩
assignment
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

propagate_on_container_swap

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_swap
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

size_type

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::size_type
```

The allocator's size type.

value_type

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::value_type
```

The allocated type.

void_pointer

```
template<typename _Tp>
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::void_pointer
```

The allocator's void pointer type.

6.192.3 Member Function Documentation

allocate() [1/2]

```
template<typename _Tp>
pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
            allocator_type & __a,
            size_type __n)  [inline], [static], [nodiscard]
```

Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Calls `a.allocate(n)`.

allocate() [2/2]

```
template<typename _Tp>
pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
            allocator_type & __a,
```

```
            size_type __n,
            const_void_pointer )  [inline], [static], [nodiscard]
```

Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Returns

Memory of suitable size and alignment for `n` objects of type `value_type`.

The third parameter is ignored..
Returns `a.allocate(n)`.

allocate_at_least()

```
template<typename _Tp>
std::allocation_result< pointer, size_type > std::allocator_traits< pmr::polymorphic_allocator<
_Tp > >::allocate_at_least (
            allocator_type & __a,
            size_type __n)  [inline], [static], [nodiscard]
```

Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Returns

Memory of suitable size and alignment for `n` objects of type `value_type`.

Just returns `{ a.allocate(n), n }`: `polymorphic_allocator` cannot be extended without breaking ABI.

construct()

```
template<typename _Tp>
template<typename _Up, typename...  _Args>
void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::construct (
            allocator_type & __a,
            _Up * __p,
            _Args &&...  __args)  [inline], [static]
```

Construct an object of type `_Up`.

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for an object of type `_Up`.
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...)` in C++11, C++14 and C++17. Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...)` instead. References std::forward().

deallocate()

```
template<typename _Tp>
void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::deallocate (
            allocator_type & __a,
            pointer __p,
            size_type __n)  [inline], [static]
```

Deallocate memory.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the memory to deallocate.
_↩ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`.

destroy()

```
template<typename _Tp>
template<typename _Up>
constexpr void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::destroy (
            allocator_type & ,
            _Up * __p)  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Up`.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the object to destroy

Calls `p->_Up()`.

max_size()

```
template<typename _Tp>
constexpr size_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::max_size (
            const allocator_type & )  [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Returns

```
numeric_limits<size_t>::max() / sizeof(value_type)
```

select_on_container_copy_construction()

```
template<typename _Tp>
allocator_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::select_on_container↩
_copy_construction (
            const allocator_type & )  [inline], [static], [noexcept]
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

6.196.1 Detailed Description

A type-safe container of any type.
An `any` object's state is either empty or it stores a contained object of CopyConstructible type.

6.196.2 Constructor & Destructor Documentation

any() [1/5]

```
std::experimental::fundamentals_v1::any::any ()  [inline], [noexcept]
```

Default constructor, creates an empty object.
Referenced by any(), any(), operator=(), operator=(), operator=(), and swap().

any() [2/5]

```
std::experimental::fundamentals_v1::any::any (
            const any & __other)  [inline]
```

Copy constructor, copies the state of __other.
References any(), and empty().

any() [3/5]

```
std::experimental::fundamentals_v1::any::any (
            any && __other)  [inline], [noexcept]
```

Move constructor, transfer the state from __other.

Postcondition

__other.empty() (this postcondition is a GNU extension)

References any().

any() [4/5]

```
template<typename _ValueType, typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if< is_constructible< _Tp, _ValueType && >::value, bool >::type = true>
std::experimental::fundamentals_v1::any::any (
            _ValueType && __value)  [inline]
```

Construct with a copy of __value as the contained object.
References std::forward().

any() [5/5]

```
template<typename _ValueType, typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if<!is_constructible< _Tp, _ValueType && >::value, bool >::type = false>
std::experimental::fundamentals_v1::any::any (
            _ValueType && __value)  [inline]
```

Construct with a copy of __value as the contained object.

~any()

```
std::experimental::fundamentals_v1::any::~any ()  [inline]
```

Destructor, calls clear().
References clear().

6.196.3 Member Function Documentation

clear()

```
void std::experimental::fundamentals_v1::any::clear ()  [inline], [noexcept]
```

If not empty, destroy the contained object.
References empty().
Referenced by ~any(), and operator=().

empty()

```
bool std::experimental::fundamentals_v1::any::empty () const  [inline], [nodiscard], [noexcept]
```

Reports whether there is a contained object or not.
Referenced by any(), clear(), swap(), and type().

operator=() [1/3]

```
template<typename _ValueType>
enable_if_t<!is_same< any, decay_t< _ValueType > >::value, any & > std::experimental::fundamentals↩
_v1::any::operator= (
            _ValueType && __rhs)  [inline]
```

Store a copy of __rhs as the contained object.
References any(), and std::forward().

operator=() [2/3]

```
any & std::experimental::fundamentals_v1::any::operator= (
            any && __rhs)  [inline], [noexcept]
```

Move assignment operator.

Postcondition

`__rhs.empty()` (not guaranteed for other implementations)

References any(), and clear().

operator=() [3/3]

```
any & std::experimental::fundamentals_v1::any::operator= (
            const any & __rhs)  [inline]
```

Copy the state of another object.
References any().

swap()

```
void std::experimental::fundamentals_v1::any::swap (
            any & __rhs)  [inline], [noexcept]
```

Exchange state with another object.
References any(), and empty().

type()

```
const type_info & std::experimental::fundamentals_v1::any::type () const  [inline], [noexcept]
```

The `typeid` of the contained object, or `typeid(void)` if empty.
References empty().
The documentation for this class was generated from the following file:

- experimental/any

Public Attributes

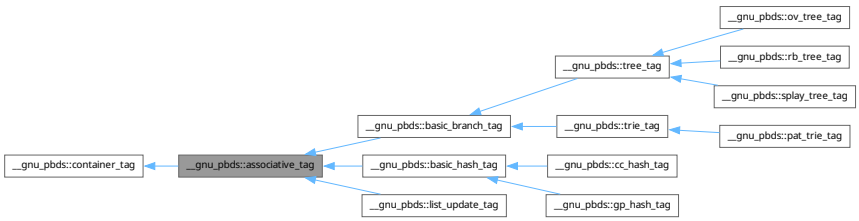
- __array_traits< _Tp, _Nm >::_Type **_M_elems**

6.197.1 Detailed Description

template<typename _Tp, std::size_t _Nm>
struct std::array< _Tp, _Nm >

A standard container for storing a fixed size sequence of elements.
Meets the requirements of a container, a reversible container, and a sequence.
Sets support random access iterators.

Template Parameters



Tp	Type of element. Required to be a complete type.
Nm	Number of elements.

The documentation for this struct was generated from the following file:

- array

6.198 __gnu_pbds::associative_tag Struct Reference

`#include <tag_and_trait.hpp>`
Inheritance diagram for __gnu_pbds::associative_tag:

6.198.1 Detailed Description

Basic associative-container.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

6.199 std::atomic< _Tp > Struct Template Reference

`#include <atomic>`

6.199.1 Detailed Description

template<typename _Tp>
struct std::atomic< _Tp >

Generic atomic type, primary class template.

Template Parameters

_Tp	Type to be made atomic, must be trivially copyable.

The documentation for this struct was generated from the following file:

- atomic

6.200 std::atomic< _Tp * > Struct Template Reference

`#include <atomic>`

- void reset (element_type *__p=0) throw ()

6.217.1 Detailed Description

template<typename _Tp>
class std::auto_ptr< _Tp >

A simple smart pointer providing strict ownership semantics.
The Standard says:

```
An  auto_ptr owns the object it holds a pointer to.  Copying
an  auto_ptr copies the pointer and transfers ownership to the
destination.  If more than one  auto_ptr owns the same object
at the same time the behavior of the program is undefined.

The uses of  auto_ptr include providing temporary
exception-safety for dynamically allocated memory, passing
ownership of dynamically allocated memory to a function, and
returning dynamically allocated memory from a function.   auto_ptr does not meet the CopyConstructib
requirements for Standard Library container elements and thus
instantiating a Standard Library container with an  auto_ptr results in undefined behavior.
```

Quoted from [20.4.5]/3.
Good examples of what can and cannot be done with auto_ptr can be found in the libstdc++ testsuite.
_GLIBCXX_RESOLVE_LIB_DEFECTS

1. auto_ptr<> conversion issues These resolutions have all been incorporated.

Deprecated Deprecated in C++11, no longer in the standard since C++17. Use `unique_ptr` instead.

6.217.2 Member Typedef Documentation

element_type

```
template<typename _Tp>
typedef _Tp std::auto_ptr< _Tp >::element_type
```

The pointed-to type.

6.217.3 Constructor & Destructor Documentation

auto_ptr() [1/4]

```
template<typename _Tp>
std::auto_ptr< _Tp >::auto_ptr (
            element_type * __p = 0) throw ( )   [inline], [explicit]
```

An auto_ptr is usually constructed from a raw pointer.

Parameters

_↩ _p	A pointer (defaults to NULL).

This object now *owns* the object pointed to by *__p*.
Referenced by auto_ptr(), auto_ptr(), operator=(), and operator=().

auto_ptr() [2/4]

```
template<typename _Tp>
std::auto_ptr< _Tp >::auto_ptr (
            auto_ptr< _Tp > & __a) throw ( )   [inline]
```

An auto_ptr can be constructed from another auto_ptr.

Parameters

_↩ _a	Another auto_ptr of the same type.

This object now *owns* the object previously owned by *__a*, which has given up ownership.
References auto_ptr().

auto_ptr() [3/4]

```
template<typename _Tp>
template<typename _Tp1>
std::auto_ptr< _Tp >::auto_ptr (
            auto_ptr< _Tp1 > & __a) throw ( )   [inline]
```

An auto_ptr can be constructed from another auto_ptr.

Parameters

_↩ _a	Another auto_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.
This object now *owns* the object previously owned by *__a*, which has given up ownership.
References auto_ptr().

~auto_ptr()

```
template<typename _Tp>
std::auto_ptr< _Tp >::~auto_ptr ()  [inline]
```

When the auto_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get()` is `NULL`), then this has no effect.
The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if _Tp::~_Tp() throws, but this is prohibited. [17.4.3.6]/2

auto_ptr() [4/4]

```
template<typename _Tp>
std::auto_ptr< _Tp >::auto_ptr (
            auto_ptr_ref< element_type > __ref) throw ( )   [inline]
```

Automatic conversions.
These operations are supposed to convert an auto_ptr into and from an auto_ptr_ref automatically as needed. This would allow constructs such as

```
auto_ptr<Derived>  func_returning_auto_ptr(.....);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(.....);
```

But it doesn't work, and won't be fixed. For further details see https://cplusplus.github.io/LWG/↩ lwg-closed.html#463

6.217.4 Member Function Documentation

get()

```
template<typename _Tp>
element_type * std::auto_ptr< _Tp >::get () const throw ( )   [inline]
```

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This auto_ptr still owns the memory.

operator*()

```
template<typename _Tp>
element_type & std::auto_ptr< _Tp >::operator* () const throw ( )   [inline]
```

Smart pointer dereferencing.
If this auto_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

operator->()

```
template<typename _Tp>
element_type * std::auto_ptr< _Tp >::operator-> () const throw ( )   [inline]
```

Smart pointer dereferencing.
This returns the pointer itself, which the language then will automatically cause to be dereferenced.

operator=() [1/2]

```
template<typename _Tp>
auto_ptr & std::auto_ptr< _Tp >::operator= (
            auto_ptr< _Tp > & __a) throw ( )   [inline]
```

auto_ptr assignment operator.

Parameters

_↩ _a	Another auto_ptr of the same type.

This object now *owns* the object previously owned by __a, which has given up ownership. The object that this one *used* to own and track has been deleted.
References auto_ptr(), and reset().

operator=() [2/2]

```
template<typename _Tp>
template<typename _Tp1>
auto_ptr & std::auto_ptr< _Tp >::operator= (
            auto_ptr< _Tp1 > & __a) throw ( )   [inline]
```

auto_ptr assignment operator.

Parameters

_↩ _a	Another auto_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.
This object now *owns* the object previously owned by __a, which has given up ownership. The object that this one *used* to own and track has been deleted.
References auto_ptr(), and reset().

release()

```
template<typename _Tp>
element_type * std::auto_ptr< _Tp >::release () throw ( )   [inline]
```

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This auto_ptr no longer owns the memory. When this object goes out of scope, nothing will happen.

reset()

```
template<typename _Tp>
void std::auto_ptr< _Tp >::reset (
            element_type * __p = 0) throw ( )   [inline]
```

Forcibly deletes the managed object.

Parameters

_↩ _p	A pointer (defaults to NULL).

This object now *owns* the object pointed to by __*p*. The previous object has been deleted.
Referenced by operator=(), and operator=().
The documentation for this class was generated from the following files:

- shared_ptr_base.h
- auto_ptr.h

6.218 std::auto_ptr_ref< _Tp1 > Struct Template Reference

`#include <auto_ptr.h>`

Public Member Functions

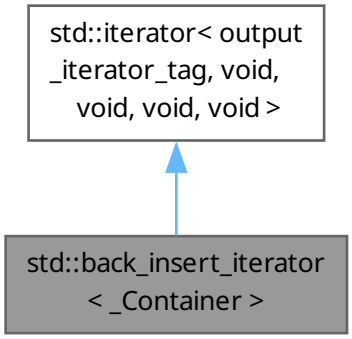
- **auto_ptr_ref** (_Tp1 *__p)

Public Attributes

- _Tp1 * **_M_ptr**

6.218.1 Detailed Description

template<typename _Tp1>
struct std::auto_ptr_ref< _Tp1 >



A wrapper class to provide auto_ptr with reference semantics. For example, an auto_ptr can be assigned (or constructed from) the result of a function which returns an auto_ptr by value.
All the auto_ptr_ref stuff should happen behind the scenes.
The documentation for this struct was generated from the following file:

- auto_ptr.h

6.219 std::back_insert_iterator< _Container > Class Template Reference

`#include <stl_iterator.h>`

Inheritance diagram for std::back_insert_iterator< _Container >:

Public Types

- typedef _Container container_type
- using **difference_type**
- typedef output_iterator_tag iterator_category
- typedef void pointer
- typedef void reference
- typedef void value_type

Public Member Functions

- constexpr back_insert_iterator (_Container &__x)
- constexpr back_insert_iterator & operator* ()
- constexpr back_insert_iterator & operator++ ()
- constexpr back_insert_iterator operator++ (int)
- constexpr back_insert_iterator & operator= (const typename _Container::value_type &__value)
- constexpr back_insert_iterator & **operator=** (typename _Container::value_type &&__value)

Protected Attributes

- _Container * **container**

6.219.1 Detailed Description

template<**typename _Container**>
class std::back_insert_iterator< **_Container** >

Turns assignment into insertion.
These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using push_back.
Tip: Using the back_inserter function to create these iterators can save typing.

6.219.2 Member Typedef Documentation

container_type

```
template<typename _Container>
typedef _Container std::back_insert_iterator< _Container >::container_type
```

A nested typedef for the type of whatever container you used.

iterator_category

```
typedef output_iterator_tag std::iterator< output_iterator_tag, void, void, void, void >::↩
iterator_category  [inherited]
```

One of the tag types.

pointer

```
typedef void std::iterator< output_iterator_tag, void, void, void, void >::pointer  [inherited]
```

This type represents a pointer-to-value_type.

reference

```
typedef void std::iterator< output_iterator_tag, void, void, void, void >::reference  [inherited]
```

This type represents a reference-to-value_type.

value_type

```
typedef void std::iterator< output_iterator_tag, void, void, void, void >::value_type  [inherited]
```

The type "pointed to" by the iterator.

6.219.3 Constructor & Destructor Documentation

back_insert_iterator()

```
template<typename _Container>
std::back_insert_iterator< _Container >::back_insert_iterator (
            _Container & __x)  [inline], [explicit], [constexpr]
```

The only way to create this iterator is with a container.

References std::__addressof().

6.219.4 Member Function Documentation

operator*()

```
template<typename _Container>
back_insert_iterator & std::back_insert_iterator< _Container >::operator* ()  [inline], [nodiscard],
[constexpr]
```

Simply returns *this.

operator++() [1/2]

```
template<typename _Container>
back_insert_iterator & std::back_insert_iterator< _Container >::operator++ ()  [inline], [constexpr]
```

Simply returns *this. (This iterator does not *move*.).

operator++() [2/2]

```
template<typename _Container>
back_insert_iterator std::back_insert_iterator< _Container >::operator++ (
            int )  [inline], [constexpr]
```

Simply returns ∗this. (This iterator does not *move*.).

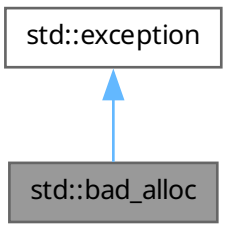
operator=()

```
template<typename _Container>
back_insert_iterator & std::back_insert_iterator< _Container >::operator= (
            const typename _Container::value_type & __value)  [inline], [constexpr]
```

Parameters

__value	An instance of whatever type container_type::const_reference is; presumably a reference-to-const T for container<T>.

Returns



This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.
The documentation for this class was generated from the following file:

6.220 std::bad_alloc Class Reference

`#include <new_except.h>`
Inheritance diagram for std::bad_alloc:

Public Member Functions

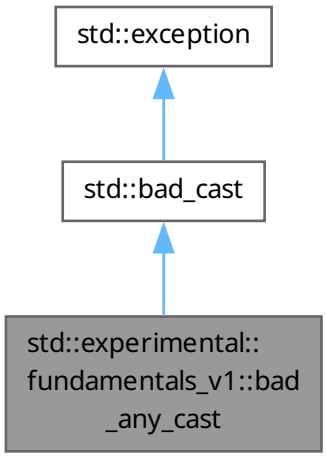
- _GLIBCXX26_CONSTEXPR **bad_alloc** (const bad_alloc &)=default
- _GLIBCXX26_CONSTEXPR bad_alloc & **operator=** (const bad_alloc &)=default
- virtual constexpr const char ∗ what () const noexcept

6.220.1 Detailed Description

Exception possibly thrown by `new`.
`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

6.220.2 Member Function Documentation

what()



```
virtual constexpr const char * std::bad_alloc::what () const  [inline], [constexpr], [virtual],
[noexcept]
```

Returns a C-style character string describing the general cause of the current error.
Reimplemented from std::exception.
The documentation for this class was generated from the following file:

- new_except.h

6.221 std::experimental::fundamentals_v1::bad_any_cast Class Reference

`#include <any>`
Inheritance diagram for std::experimental::fundamentals_v1::bad_any_cast:

Public Member Functions

- virtual const char * what () const noexcept

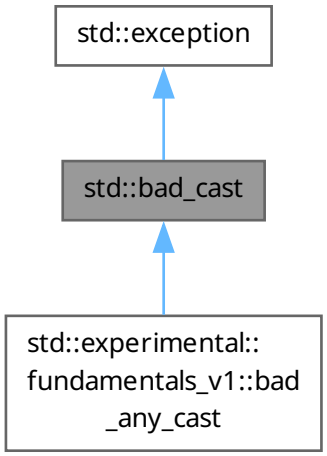
6.221.1 Detailed Description

Exception class thrown by a failed `any_cast`.

6.221.2 Member Function Documentation

what()

```
virtual const char * std::experimental::fundamentals_v1::bad_any_cast::what () const  [inline],
[virtual], [noexcept]
```



Returns a C-style character string describing the general cause of the current error.
Reimplemented from std::bad_cast.
The documentation for this class was generated from the following file:

- experimental/any

6.222 std::bad_cast Class Reference

```
#include <typeinfo>
```

Inheritance diagram for std::bad_cast:

Public Member Functions

- virtual constexpr const char * what () const noexcept

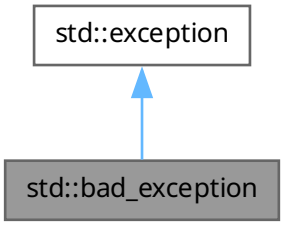
6.222.1 Detailed Description

Thrown during incorrect typecasting.
If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

6.222.2 Member Function Documentation

what()

```
virtual constexpr const char * std::bad_cast::what () const  [inline], [constexpr], [virtual],
[noexcept]
```



Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::exception.
Reimplemented in std::experimental::fundamentals_v1::bad_any_cast.
The documentation for this class was generated from the following file:

- typeinfo

6.223 std::bad_exception Class Reference

`#include <exception>`
Inheritance diagram for std::bad_exception:

Public Member Functions

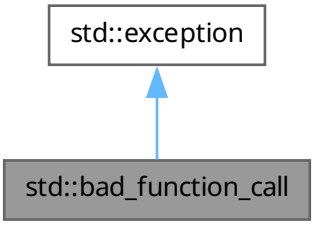
- virtual constexpr const char * what () const noexcept

6.223.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

6.223.2 Member Function Documentation

what()



`virtual constexpr const char * std::bad_exception::what () const [inline], [constexpr], [virtual], [noexcept]`
Returns a C-style character string describing the general cause of the current error.
Reimplemented from std::exception.
The documentation for this class was generated from the following file:

- exception

Inheritance diagram for __gnu_parallel::balanced_quicksort_tag:

Public Member Functions

- **balanced_quicksort_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

6.228.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

6.228.2 Member Function Documentation

__get_num_threads()

```
_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ()  [inline], [inherited]
```

Find out desired number of threads.

Returns

Desired number of threads.

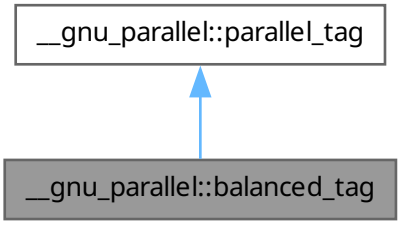
Referenced by __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), and __gnu_parallel::__parallel_sort(

set_num_threads()

```
void __gnu_parallel::parallel_tag::set_num_threads (
            _ThreadIndex __num_threads)  [inline], [inherited]
```

Set the desired number of threads.

Parameters



__num_threads	Desired number of threads.

The documentation for this struct was generated from the following file:

- tags.h

6.229 __gnu_parallel::balanced_tag Struct Reference

`#include <tags.h>`
Inheritance diagram for __gnu_parallel::balanced_tag:

Public Member Functions

- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

6.229.1 Detailed Description

Recommends parallel execution using dynamic load-balancing at compile time.

6.229.2 Member Function Documentation

__get_num_threads()

```
_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ()  [inline], [inherited]
```
Find out desired number of threads.

Returns

Desired number of threads.

Referenced by __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort(), and __gnu_parallel::__parallel_sort(

set_num_threads()

```
void __gnu_parallel::parallel_tag::set_num_threads (
            _ThreadIndex __num_threads)  [inline], [inherited]
```
Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

The documentation for this struct was generated from the following file:

  basic_branch (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)

6.231.1 Detailed Description

template<typename Key, typename Mapped, typename Tag, typename Node_Update, typename Policy_Tl, typename _Alloc>
class __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >

A branched, tree-like (tree, trie) container abstraction.

Template Parameters

Key	Key type.
Mapped	Map type.
Tag	Instantiating data structure type, see container_tag.
Node_Update	Updates nodes, restores invariants.
Policy_TL	Policy typelist.
_Alloc	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: tree_tag, trie_tag, and their descendants. Base choices are: detail::ov_tree_map, detail::rb_tree_map, detail::splay_tree_map, and detail::pat_trie_map.
The documentation for this class was generated from the following file:

- class **ios_base**

6.233.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_filebuf< _CharT, _Traits >

The actual work of input and output (for files).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.
Requirements on traits_type, specific to this class:

- traits_type::pos_type must be fpos<traits_type::state_type>
- traits_type::off_type must be streamoff
- traits_type::state_type must be Assignable and DefaultConstructible,
- traits_type::state_type() must be the initial state for codecvt.

6.233.2 Constructor & Destructor Documentation

basic_filebuf()

```
template<typename _CharT, typename _Traits>
std::basic_filebuf< _CharT, _Traits >::basic_filebuf ()
```

Does not open any files.
The default constructor initializes the parent class using its own default ctor.
References _M_buf, std::basic_streambuf< _CharT, _Traits >::_M_buf_locale, _M_buf_size, _M_ext_buf, _M_ext_buf_size, _M_ext_next, _M_mode, _M_pback, _M_pback_cur_save, _M_pback_end_save, _M_pback_init, and _M_reading.
Referenced by __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), and close().

~basic_filebuf()

```
template<typename _CharT, typename _Traits>
virtual std::basic_filebuf< _CharT, _Traits >::~basic_filebuf ()  [inline], [virtual]
```

The destructor closes the file first.

6.233.3 Member Function Documentation

_M_create_pback()

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_create_pback ()  [inline], [protected]
```

Initializes pback buffers, and moves normal buffers to safety. Assumptions: _M_in_cur has already been moved back
Referenced by pbackfail().

_M_destroy_pback()

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback () throw ( )  [inline], [protected]
```

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.
Referenced by overflow(), seekoff(), seekpos(), underflow(), and xsgetn().

_M_set_buffer()

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (
            streamsize __off)  [inline], [protected]
```

This function sets the pointers of the internal buffer, both get and put areas. Typically:
__off == egptr() - eback() upon underflow/uflow (**read** mode); __off == 0 upon overflow (**write** mode); __off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).
NB: epptr() - pbase() == _M_buf_size - 1, since _M_buf_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.
Referenced by __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), close(), imbue(), open(), overflow(), pbackfail(), underflow(), xsgetn(), and xsputn().

close()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::close
()
```

Closes the currently associated file.

Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.
If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.
If any operations fail, this function also fails.
References basic_filebuf(), _M_mode, _M_pback_init, _M_reading, _M_set_buffer(), and is_open().
Referenced by std::basic_filebuf< char_type, traits_type >::~basic_filebuf(), and open().

eback()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::eback () const  [inline], [protected], [inherited]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _Cha std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

egptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::egptr () const  [inline], [protected], [inherited]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence

- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_stringbuf< char std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow(), std::basic_filebuf< _CharT, _Traits >::xsgetn(), and xsgetn().

epptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::epptr () const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sputc(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and xsputn().

gbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::gbump (
            int __n)  [inline], [protected], [inherited]
```

Moving the read position.

Parameters

_↩ _n	The delta by which to move.

This just advances the read position without returning any data.
Referenced by std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_streambuf< char_type, traits_type >::uflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

getloc()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::getloc () const  [inline], [inherited]
```

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.
Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

gptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::gptr () const  [inline], [protected], [inherited]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy
std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_stringbuf< _CharT,
std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< cha
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_streambuf< char_type, traits_type >::sgetc(),
std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_stringbuf< char >::showmanyc(), std::basic_streambuf< char_type, traits
std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_streambuf< char_type, traits_type >::uflow(),
std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(),
std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow(), std::basic_filebuf< _CharT, _Traits >::xsgetn(), and
xsgetn().

imbue()

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::imbue (
             const locale & __loc)  [protected], [virtual]
```

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_ext_buf, _M_ext_next, _M_mode, _M_reading, _M_set_buffer(), std::ios_base::cur, std::basic_streambuf< _CharT, _Trait
std::basic_streambuf< _CharT, _Traits >::gptr(), is_open(), and seekoff().

in_avail()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ()  [inline], [inherited]
```

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

is_open()

```
template<typename _CharT, typename _Traits>
bool std::basic_filebuf< _CharT, _Traits >::is_open () const throw ( )   [inline], [nodiscard]
```

Returns true if the external file is open.
Referenced by __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), close(), imbue(), open(), seekoff(), seekpos(), setbuf(), and showmanyc().

open() [1/3]

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path< _Path, __filebuf_type * > std::basic_filebuf< _CharT, _Traits >::open (
            const _Path & __s,
            ios_base::openmode __mode)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file, as a filesystem::path.
__mode	The open mode flags.

Returns

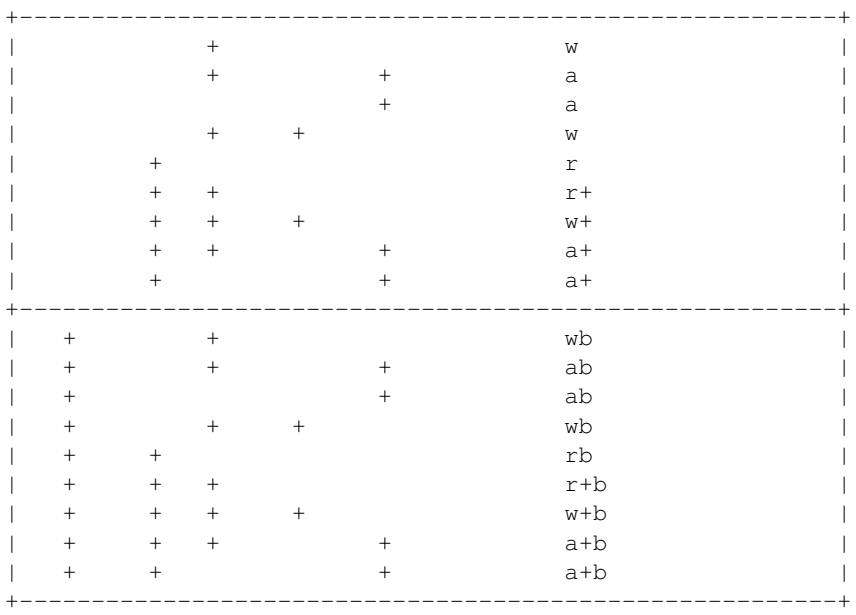
`this` on success, NULL on failure

open() [2/3]

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (
            const char * __s,
            ios_base::openmode __mode)
```

Opens an external file.

Parameters



__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *__s* using the flags given in *__mode*.
Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596)

```
+-------------------------------------------------------+
| ios_base Flag combination            stdio equivalent   |
|binary  in  out  trunc  app                              |
```

References _M_mode, _M_reading, _M_set_buffer(), std::ios_base::ate, close(), std::ios_base::end, is_open(), and seekoff().
Referenced by std::basic_filebuf< char_type, traits_type >::open(), and std::basic_filebuf< char_type, traits_type >::open().

open() [3/3]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (
            const std::string & __s,
            ios_base::openmode __mode)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

overflow()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow (
            int_type __c = _Traits::eof())  [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

_↩ _c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __c, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __c is not `eof()`.
For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_buf_size, _M_destroy_pback(), _M_mode, _M_reading, _M_set_buffer(), std::ios_base::app, std::ios_base::cur, std::ios_base::out, std::basic_streambuf< _CharT, _Traits >::pbase(), std::basic_streambuf< _CharT, _Traits >::pbum and std::basic_streambuf< _CharT, _Traits >::pptr().
Referenced by pbackfail(), sync(), underflow(), and xsgetn().

pbackfail()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (
            int_type __c = _Traits::eof())  [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

_↩ _c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_create_pback(), _M_mode, _M_pback_init, _M_reading, _M_set_buffer(), std::ios_base::cur, std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::gbump(), std::basic_streambuf< _CharT, _ std::ios_base::in, overflow(), seekoff(), and underflow().

pbase()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pbase () const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, std::basic_stringbuf< char >::str(), std::basic_filebuf< _CharT, _Traits >::sync(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

pbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::pbump (
            int __n)  [inline], [protected], [inherited]
```

Moving the write position.

Parameters

_↩ _n	The delta by which to move.

This just advances the write position without returning any data.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), and std::basic_streambuf< char_type, traits_type >::sputc().

pptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pptr () const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_streambuf< char_t std::basic_filebuf< _CharT, _Traits >::sync(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and xsputn().

pubimbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
            const locale & __loc)  [inline], [inherited]
```

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

pubseekoff()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline], [inherited]
```

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

pubseekpos()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
            pos_type __sp,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline], [inherited]
```

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

pubsetbuf()

```
template<typename _CharT, typename _Traits>
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Entry points for derived buffer functions.
The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

pubsync()

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync ()  [inline], [inherited]
```

Calls virtual sync function.
Referenced by std::basic_istream< _CharT, _Traits >::sync().

sbumpc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ()  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_streambuf< char_type, traits_type >::snextc().

seekoff()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekoff (
            off_type ,
            ios_base::seekdir ,
            ios_base::openmode  = ios_base::in | ios_base::out)  [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_destroy_pback(), _M_reading, std::ios_base::cur, is_open(), std::basic_streambuf< _CharT, _Traits >::pbase(), and std::basic_streambuf< _CharT, _Traits >::pptr().
Referenced by imbue(), open(), and pbackfail().

seekpos()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos (
            pos_type ,
            ios_base::openmode  = ios_base::in | ios_base::out)  [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_destroy_pback(), std::ios_base::beg, and is_open().

setbuf()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >::↩
setbuf (
            char_type * __s,
            streamsize __n)  [protected], [virtual]
```

Manipulates the buffer.

Parameters

_↩ _s	Pointer to a buffer area.
_↩ _n	Size of __s.

Returns

this

If no file has been opened, and both __s and __n are zero, then the stream becomes unbuffered. Otherwise, __s is used as a buffer; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html↩ #io.streambuf.buffering for more.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_buf, _M_buf_size, and is_open().

setg()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
            char_type * __gbeg,
            char_type * __gnext,
            char_type * __gend)  [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == eback(), __gnext == gptr(), and __gend == egptr()

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert(), std::basic_filebuf< char_type, traits_type >::_M_create std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setp (
```

```
            char_type * __pbeg,
            char_type * __pend)  [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert(), and std::basic_filebuf< char_type, traits_type >::_M_s

sgetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ()  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::igr and std::basic_streambuf< char_type, traits_type >::snextc().

sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Entry point for xsgetn.

Parameters

_↩ _s	A buffer area.
_↩ _n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.

showmanyc()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc ()  [protected], [virtual]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*

The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_mode, std::ios_base::binary, std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits > std::ios_base::in, and is_open().

snextc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc ()  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, char_traits< _CharT > >::get(), and std::basic_istream< _CharT, char_traits< _CharT > >::readsome().

sputbackc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
            char_type __c)  [inline], [inherited]
```

Pushing characters back into the input stream.

Parameters

_↩ _c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but __c is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be __c.
Referenced by std::basic_istream< _CharT, _Traits >::putback().

sputc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
            char_type __c)  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _c	A character to output.

Returns

__c, if possible.

One of two public output functions.
If a write position is available for the output sequence (i.e., the buffer is not full), stores __c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↩ __c)`.
Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::overflow().

sputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
            const char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _s	A buffer read area.
_↩ _n	A count.

One of two public output functions.
Returns xsputn(__s,__n). The effect is to write __s[0] through __s[__n-1] to the output sequence, if possible.

sungetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ()  [inline], [inherited]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.
Referenced by std::basic_istream< _CharT, _Traits >::unget().

sync()

```
template<typename _CharT, typename _Traits>
int std::basic_filebuf< _CharT, _Traits >::sync ()  [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References overflow(), std::basic_streambuf< _CharT, _Traits >::pbase(), and std::basic_streambuf< _CharT, _Traits >::pptr().

uflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ()  [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.
Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.
Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), and xsgetn().

underflow()

```
template<typename _CharT, typename _Traits>
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow ()
[protected], [virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.
For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.
A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_buf_size, _M_destroy_pback(), _M_mode, _M_set_buffer(), std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::gptr(), std::ios_base::in, and overflow().
Referenced by pbackfail().

xsgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (
            char_type * __s,
            streamsize __n)  [protected], [virtual]
```

Multiple character extraction.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __s[0] through __s[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __n characters have been copied, or when `traits::eof()` would be copied.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_buf_size, _M_destroy_pback(), _M_mode, _M_pback_init, _M_reading, _M_set_buffer(), std::basic_streambuf< _CharT, _
std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::gbump(), std::basic_streambuf< _CharT, _T
std::ios_base::in, overflow(), std::basic_streambuf< _CharT, _Traits >::setg(), and std::basic_streambuf< char_type, traits_type >::xsgetn

xsputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf< _CharT, _Traits >::xsputn (
            const char_type * __s,
            streamsize __n)  [protected], [virtual]
```

Multiple character insertion.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __s[0] through __s[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_buf_size, _M_mode, _M_reading, _M_set_buffer(), std::ios_base::app, std::basic_streambuf< _CharT, _Traits >::epptr(),
std::ios_base::out, std::basic_streambuf< _CharT, _Traits >::pbase(), std::basic_streambuf< _CharT, _Traits >::pptr(),
and std::basic_streambuf< char_type, traits_type >::xsputn().

6.233.4 Member Data Documentation

_M_buf

```
template<typename _CharT, typename _Traits>
char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf  [protected]
```

Pointer to the beginning of internal buffer.
Referenced by basic_filebuf(), and setbuf().

_M_buf_locale

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale  [protected], [inherited]
```

Current locale setting.
Referenced by std::basic_filebuf< _CharT, _Traits >::basic_filebuf().

_M_buf_size

```
template<typename _CharT, typename _Traits>
size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size  [protected]
```

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.
Referenced by basic_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::s overflow(), setbuf(), underflow(), xsgetn(), and xsputn().

_M_ext_buf

```
template<typename _CharT, typename _Traits>
char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf  [protected]
```

Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().
Referenced by basic_filebuf(), and imbue().

_M_ext_buf_size

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size  [protected]
```

Size of buffer held by _M_ext_buf.
Referenced by basic_filebuf().

_M_ext_next

```
template<typename _CharT, typename _Traits>
const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next  [protected]
```

Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().
Referenced by basic_filebuf(), and imbue().

_M_in_beg

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg  [protected], [inherited]
```

Start of get area.

_M_in_cur

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur  [protected], [inherited]
```
Current read area.

_M_in_end

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end  [protected], [inherited]
```
End of get area.

_M_mode

```
template<typename _CharT, typename _Traits>
ios_base::openmode std::basic_filebuf< _CharT, _Traits >::_M_mode  [protected]
```
Place to stash in || out || in | out settings for current filebuf.
Referenced by basic_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::
close(), imbue(), open(), overflow(), pbackfail(), showmanyc(), underflow(), xsgetn(), and xsputn().

_M_out_beg

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg  [protected], [inherited]
```
Start of put area.

_M_out_cur

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur  [protected], [inherited]
```
Current put area.

_M_out_end

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end  [protected], [inherited]
```
End of put area.

_M_pback

```
template<typename _CharT, typename _Traits>
char_type std::basic_filebuf< _CharT, _Traits >::_M_pback  [protected]
```
Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Referenced by basic_filebuf().

_M_pback_cur_save

```
template<typename _CharT, typename _Traits>
char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save  [protected]
```
Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Referenced by basic_filebuf().

_M_pback_end_save

```
template<typename _CharT, typename _Traits>
char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save  [protected]
```

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Referenced by basic_filebuf().

_M_pback_init

```
template<typename _CharT, typename _Traits>
bool std::basic_filebuf< _CharT, _Traits >::_M_pback_init  [protected]
```

Necessary bits for putback buffer management.

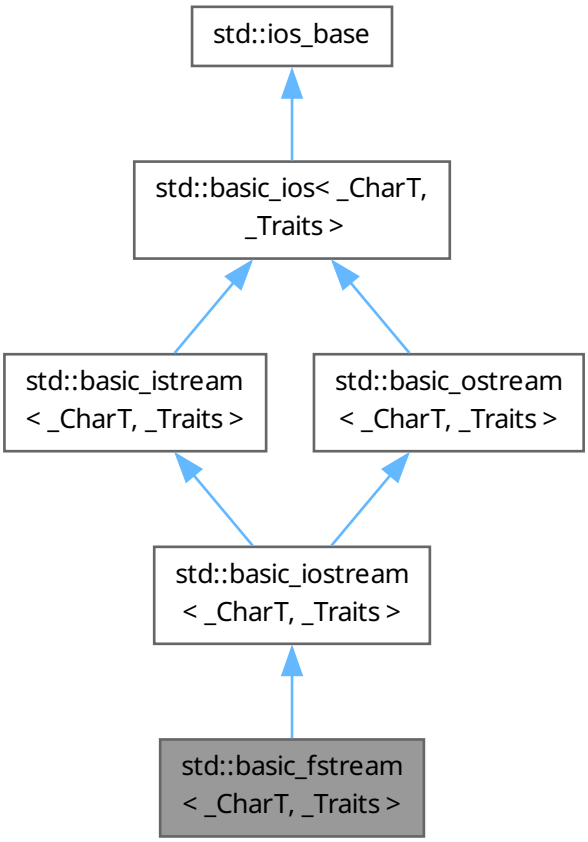
Note

pbacks of over one character are not currently supported.

Referenced by basic_filebuf(), close(), pbackfail(), and xsgetn().

_M_reading

```
template<typename _CharT, typename _Traits>
bool std::basic_filebuf< _CharT, _Traits >::_M_reading  [protected]
```



_M_reading == false && _M_writing == false for **uncommitted** mode; _M_reading == true for **read** mode; _M_writing == true for **write** mode;
NB: _M_reading == true && _M_writing == true is unused.
Referenced by basic_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf(), __gnu_cxx::stdio_filebuf< _CharT, _Traits >::
close(), imbue(), open(), overflow(), pbackfail(), seekoff(), xsgetn(), and xsputn().
The documentation for this class was generated from the following files:

- fstream
- fstream.tcc

6.234 std::basic_fstream< _CharT, _Traits > Class Template Reference

```
#include <fstream>
```

Inheritance diagram for std::basic_fstream< _CharT, _Traits >:

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __ostream_type & operator<< (__ostream_type &(*__pf)(__ostream_type &))
- __ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))
- __ostream_type & operator<< (ios_base &(*__pf)(ios_base &))

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (long __n)
- __ostream_type & operator<< (unsigned long __n)
- __ostream_type & operator<< (bool __n)
- __ostream_type & operator<< (short __n)

- __ostream_type & operator<< (int __n)
- __ostream_type & operator<< (unsigned int __n)
- __ostream_type & operator<< (long long __n)
- __ostream_type & operator<< (unsigned long long __n)

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- __ostream_type & put (char_type __c)
- __ostream_type & write (const char_type *__s, streamsize __n)

6.234.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_fstream< _CharT, _Traits >

Controlling input and output for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from and writing to named files, using the inherited functions from std::basic_iostream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.

6.234.2 Member Typedef Documentation

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha

- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

`typedef _Ios_Iostate std::ios_base::iostate [inherited]`
This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

`typedef _Ios_Openmode std::ios_base::openmode [inherited]`
This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir  [inherited]
```

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.234.3 Member Enumeration Documentation

event

```
enum std::ios_base::event  [inherited]
```

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.234.4 Constructor & Destructor Documentation

basic_fstream() [1/4]

```
template<typename _CharT, typename _Traits>
std::basic_fstream< _CharT, _Traits >::basic_fstream ()  [inline]
```

Default constructor.
Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).

basic_fstream() [2/4]

```
template<typename _CharT, typename _Traits>
std::basic_fstream< _CharT, _Traits >::basic_fstream (
            const char * __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline], [explicit]
```

Create an input/output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

basic_fstream() [3/4]

```
template<typename _CharT, typename _Traits>
std::basic_fstream< _CharT, _Traits >::basic_fstream (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline], [explicit]
```

Create an input/output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

basic_fstream() [4/4]

```
template<typename _CharT, typename _Traits>
template<typename _Path, typename _Require = _If_fs_path<_Path>>
std::basic_fstream< _CharT, _Traits >::basic_fstream (
            const _Path & __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline]
```

Create an input/output file stream.

Parameters

__s	filesystem::path specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

~basic_fstream()

```
template<typename _CharT, typename _Traits>
std::basic_fstream< _CharT, _Traits >::~basic_fstream ()  [inline]
```

The destructor does nothing.
The file is closed by the filebuf object, not the formatting stream.

6.234.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

close()

```
template<typename _CharT, typename _Traits>
void std::basic_fstream< _CharT, _Traits >::close ()  [inline]
```

Close the file.
Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<, std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

flush()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush ()  [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::flush().

gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const  [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().
Referenced by std::basic_istream< char_type, traits_type >::get(), and std::basic_istream< char_type, traits_type >::get().

get() [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb)  [inline], [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns `get`(__sb,widen('\n')).

get() [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim)  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

get() [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c)  [inherited]
```

Simple extraction.

Parameters

_↩ _c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in __c. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

get() [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

*this

Returns get(__s,__n,widen('\n')).

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.

__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
             char_type * __s,
             streamsize __n)  [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline`(__s,__n,widen('\n')).

getline() [2/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
             char_type * __s,
             streamsize __n,
             char_type __delim)  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

getline() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
References _M_gcount, and std::ios_base::goodbit.
Referenced by std::basic_istream< char_type, traits_type >::getline().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

ignore() [1/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >::sbumpc().
Referenced by std::basic_istream< char_type, traits_type >::ignore().

ignore() [2/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n)  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

ignore() [3/4]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            char __delim)  [inline], [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

ignore() [4/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim)  [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide four overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩
html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b

std::basic_ofstream< char >::basic_ofstream(), std::basic_ostream< char_type, traits_type >::basic_ostream(), std::basic_ostringstream< char >::basic_ostringstream(), std::basic_ostringstream< char >::basic_ostringstream(), std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(), std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

is_open()

```
template<typename _CharT, typename _Traits>
bool std::basic_fstream< _CharT, _Traits >::is_open ()  [inline], [nodiscard]
```

Wrapper to test for an open file.

Returns

```
rdbuf()->is_open()
```

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

open() [1/3]

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path< _Path, void > std::basic_fstream< _CharT, _Traits >::open (
            const _Path & __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file, as a filesystem::path.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.

open() [2/3]

```
template<typename _CharT, typename _Traits>
void std::basic_fstream< _CharT, _Traits >::open (
            const char * __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), and std::basic_fstream< char >::open().

open() [3/3]

```
template<typename _CharT, typename _Traits>
void std::basic_fstream< _CharT, _Traits >::open (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator<<() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(* __pf )(__ostream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb)  [inherited]
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from __sb and inserted into *this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from __sb, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p)  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            short __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
References basic_ostream(), std::ios_base::badbit, std::ostreambuf_iterator< _CharT, _Traits >::failed(), std::ios_base::goodbit, std::num_put< _CharT, _OutIter >::put(), std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator<<() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned int __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned short __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator>>() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws.
For more information, see the iomanip header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __istream_type &(* __pf )(__istream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws.
For more information, see the iomanip header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb)  [inherited]
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the __sb streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void )  [inherited]
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

put()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c)  [inherited]
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::endl(), and std::ends().

putback()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
            char_type __c)  [inherited]
```

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If rdbuf() is not null, calls rdbuf()->sputbackc(c).
If rdbuf() is null or if sputbackc() fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().
Referenced by std::operator<<().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_fstream< _CharT, _Traits >::rdbuf () const  [inline], [nodiscard]
```

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >::| std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

read()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount.

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into __s depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::
and std::basic_ios< _CharT, _Traits >::setstate().

register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            off_type __off,
            ios_base::seekdir __dir)  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(
std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits
and std::basic_ios< _CharT, _Traits >::setstate().

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos)  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(
std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits
and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir)  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos)  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
             iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

sync()

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
             void )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(),
std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellg()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void )  [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

tellp()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()  [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
References std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf()

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unget()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void )  [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().
Referenced by std::__detail::operator>>().

unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

write()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n)  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
int std::ios_base::xalloc () throw ( )   [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.234.6 Member Data Documentation

_M_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount  [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see gcount().
Referenced by get(), get(), get(), get(), getline(), ignore(), ignore(), ignore(), putback(), read(), readsome(), and unget().

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```
A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app [static], [inherited]
```
Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

```
const openmode std::ios_base::ate [static], [inherited]
```
Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```
A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

```
const openmode std::ios_base::binary [static], [inherited]
```
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

```
const fmtflags std::ios_base::boolalpha  [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

```
const seekdir std::ios_base::cur  [static], [inherited]
```

Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

```
const fmtflags std::ios_base::dec  [static], [inherited]
```

Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

```
const seekdir std::ios_base::end  [static], [inherited]
```

Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

```
const iostate std::ios_base::eofbit  [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >: std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit  [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char > std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(),

std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed  [static], [inherited]
```

Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d
std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >:
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(),
std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore()
std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_
std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(),
std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(),
std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::
std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha
and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea
std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char >
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pb
std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(),
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits_
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits >
std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl
std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

`const fmtflags std::ios_base::internal [static], [inherited]`
Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Referenced by std::internal().

left

`const fmtflags std::ios_base::left [static], [inherited]`
Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

`const fmtflags std::ios_base::oct [static], [inherited]`
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

`const openmode std::ios_base::out [static], [inherited]`
Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

`const fmtflags std::ios_base::right [static], [inherited]`
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`
Skips leading white space before certain input operations.
Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

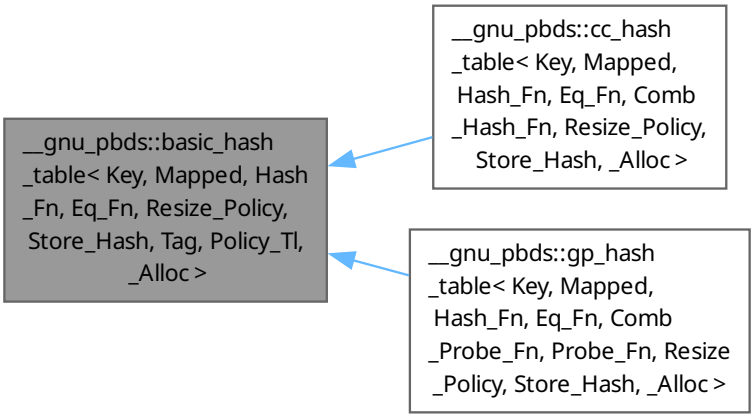
trunc

`const openmode std::ios_base::trunc [static], [inherited]`
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`
Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase



`const fmtflags std::ios_base::uppercase [static], [inherited]`
Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

- fstream

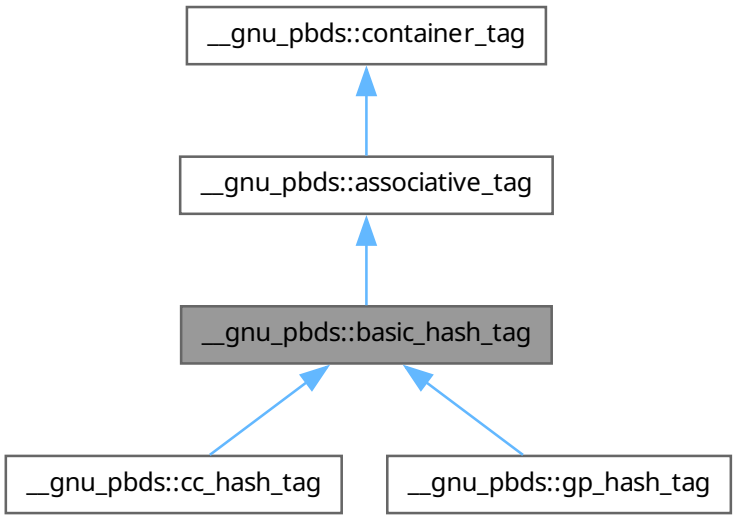
6.235.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy, bool Store_Hash, typename Tag, typename Policy_Tl, typename _Alloc>
class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >

A hashed container abstraction.

Template Parameters



Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key.
Tag	Instantiating data structure type, see container_tag.
Policy_TL	Policy typelist.
_Alloc	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: cc_hash_tag, gp_hash_tag, and descendants of basic_hash_tag.
Base choices are: detail::cc_ht_map, detail::gp_ht_map
The documentation for this class was generated from the following file:

- assoc_container.hpp

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

6.237.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ifstream< _CharT, _Traits >

Controlling input for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from named files, using the inherited functions from std::basic_istream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.

6.237.2 Member Typedef Documentation

__num_put_type

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type  [inherited]
```

These are non-standard types.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec

- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

`typedef _Ios_Iostate std::ios_base::iostate [inherited]`
This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

`typedef _Ios_Openmode std::ios_base::openmode [inherited]`
This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir  [inherited]
```

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.237.3 Member Enumeration Documentation

event

```
enum std::ios_base::event  [inherited]
```

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.237.4 Constructor & Destructor Documentation

basic_ifstream() [1/4]

```
template<typename _CharT, typename _Traits>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream ()  [inline]
```

Default constructor.
Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).

basic_ifstream() [2/4]

```
template<typename _CharT, typename _Traits>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
            const char * __s,
            ios_base::openmode __mode = ios_base::in)  [inline], [explicit]
```

Create an input file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

ios_base::in is automatically included in *__mode*.

basic_ifstream() [3/4]

```
template<typename _CharT, typename _Traits>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in)  [inline], [explicit]
```

Create an input file stream.

Parameters

__s	std::string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::in` is automatically included in *__mode*.

basic_ifstream() [4/4]

```
template<typename _CharT, typename _Traits>
template<typename _Path, typename _Require = _If_fs_path<_Path>>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
            const _Path & __s,
            ios_base::openmode __mode = ios_base::in)  [inline]
```

Create an input file stream.

Parameters

__s	filesystem::path specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::in` is automatically included in *__mode*.

~basic_ifstream()

```
template<typename _CharT, typename _Traits>
std::basic_ifstream< _CharT, _Traits >::~basic_ifstream ()  [inline]
```

The destructor does nothing.
The file is closed by the filebuf object, not the formatting stream.

6.237.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

close()

```
template<typename _CharT, typename _Traits>
void std::basic_ifstream< _CharT, _Traits >::close ()  [inline]
```

Close the file.
Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<, std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const  [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().
Referenced by std::basic_istream< char_type, traits_type >::get(), and std::basic_istream< char_type, traits_type >::get().

get() [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb)  [inline], [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).

get() [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim)  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

get() [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c)  [inherited]
```

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

get() [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get`(__s,__n,widen('\n')).

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in __s.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into __s until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals __*delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline`(__s,__n,widen('\n')).

getline() [2/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

getline() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
References _M_gcount, and std::ios_base::goodbit.
Referenced by std::basic_istream< char_type, traits_type >::getline().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```
Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```
Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

ignore() [1/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void )  [inherited]
```
Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >::sbumpc().
Referenced by std::basic_istream< char_type, traits_type >::ignore().

ignore() [2/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n)  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

ignore() [3/4]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            char __delim)  [inline], [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

ignore() [4/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim)  [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide four overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b

std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

is_open()

```
template<typename _CharT, typename _Traits>
bool std::basic_ifstream< _CharT, _Traits >::is_open ()  [inline], [nodiscard]
```

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html

open() [1/3]

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path< _Path, void > std::basic_ifstream< _CharT, _Traits >::open (
            const _Path & __s,
            ios_base::openmode __mode = ios_base::in)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file, as a filesystem::path.

__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

open() [2/3]

```
template<typename _CharT, typename _Traits>
void std::basic_ifstream< _CharT, _Traits >::open (
            const char * __s,
            ios_base::openmode __mode = ios_base::in)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.
Referenced by std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), and std::basic_ifstream< char >::open().

open() [3/3]

```
template<typename _CharT, typename _Traits>
void std::basic_ifstream< _CharT, _Traits >::open (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
```

bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator>>() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(* __pf )(__ios_type &)) [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __istream_type &(* __pf )(__istream_type &)) [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

operator>>() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            double & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            float & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            int & __n)  [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws. For more information, see the iomanip header.

operator>>() [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long double & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            short & __n)  [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.
References std::ios_base::badbit, std::ios_base::failbit, std::num_get< _CharT, _InIter >::get(), std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator>>() [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned int & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned short & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            void *& __p)  [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void )  [inherited]
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

putback()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
            char_type __c)  [inherited]
```

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().
Referenced by std::operator<<().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _*ix*	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_ifstream< _CharT, _Traits >::rdbuf () const  [inline], [nodiscard]
```

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__*sb*	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >::p std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

read()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount.

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into __*s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::
and std::basic_ios< _CharT, _Traits >::setstate().

register_callback()

```
void std::ios_base::register_callback (
             event_callback __fn,
             int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
             off_type __off,
             ios_base::seekdir __dir)  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits and std::basic_ios< _CharT, _Traits >::setstate().

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos)  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
             iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

sync()

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
             void )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellg()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void )  [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unget()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void )  [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().
Referenced by std::__detail::operator>>().

unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html
Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

`streamsize std::ios_base::width () const [inline], [nodiscard], [inherited]`
Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide) [inline], [inherited]
```
Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

xalloc()

`int std::ios_base::xalloc () throw ( ) [static], [inherited]`
Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.237.6 Member Data Documentation

_M_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount  [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see gcount().
Referenced by get(), get(), get(), get(), getline(), ignore(), ignore(), ignore(), putback(), read(), readsome(), and unget().

adjustfield

```
const fmtflags std::ios_base::adjustfield  [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app  [static], [inherited]
```

Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

```
const openmode std::ios_base::ate  [static], [inherited]
```

Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

```
const iostate std::ios_base::badbit  [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

```
const fmtflags std::ios_base::basefield  [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

const seekdir std::ios_base::beg [static], [inherited]
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

const openmode std::ios_base::binary [static], [inherited]
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract bool in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

const seekdir std::ios_base::cur [static], [inherited]
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

const fmtflags std::ios_base::dec [static], [inherited]
Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

const seekdir std::ios_base::end [static], [inherited]
Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

const iostate std::ios_base::eofbit [static], [inherited]
Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:: std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit  [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char > std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits > and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed  [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea
std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char >
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::p
std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(),
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits >
std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl
std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

```
const fmtflags std::ios_base::internal  [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Referenced by std::internal().

left

```
const fmtflags std::ios_base::left  [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

```
const fmtflags std::ios_base::oct  [static], [inherited]
```

Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

```
const openmode std::ios_base::out  [static], [inherited]
```

Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

```
const fmtflags std::ios_base::right  [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

const fmtflags std::ios_base::scientific [static], [inherited]
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

const fmtflags std::ios_base::showbase [static], [inherited]
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

const fmtflags std::ios_base::showpoint [static], [inherited]
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

const fmtflags std::ios_base::showpos [static], [inherited]
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

const fmtflags std::ios_base::skipws [static], [inherited]
Skips leading white space before certain input operations.
Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

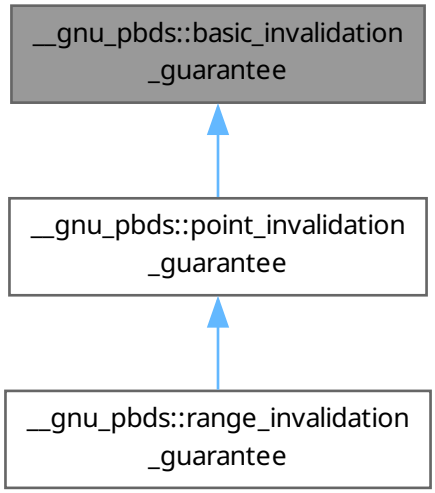
trunc

const openmode std::ios_base::trunc [static], [inherited]
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

const fmtflags std::ios_base::unitbuf [static], [inherited]
Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase



const fmtflags std::ios_base::uppercase [static], [inherited]
Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

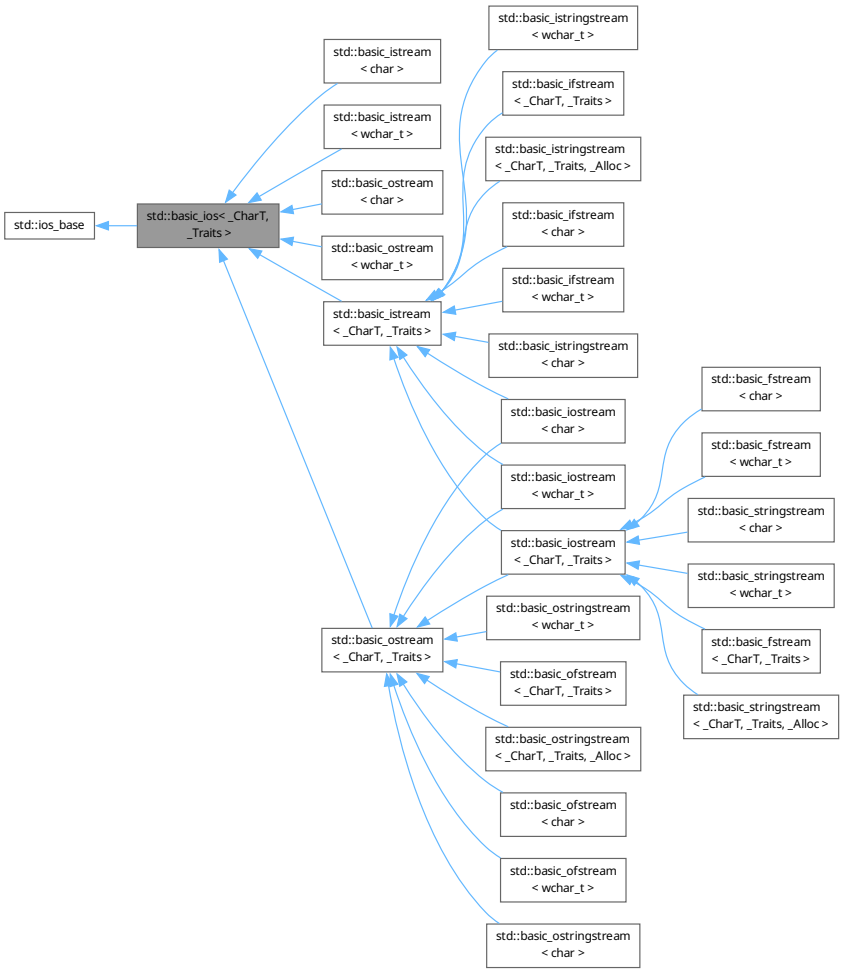
- fstream

6.238 __gnu_pbds::basic_invalidation_guarantee Struct Reference

`#include <tag_and_trait.hpp>`

Inheritance diagram for __gnu_pbds::basic_invalidation_guarantee:

6.238.1 Detailed Description



Signifies a basic invalidation guarantee that any iterator, pointer, or reference to a container object's mapped value type is valid as long as the container is not modified.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

6.239 std::basic_ios< _CharT, _Traits > Class Template Reference

6.239.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ios< _CharT, _Traits >

Template class basic_ios, virtual base class for all stream classes.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

6.239.2 Member Typedef Documentation

__ctype_type

```
template<typename _CharT, typename _Traits>
typedef ctype<_CharT> std::basic_ios< _CharT, _Traits >::__ctype_type
```

These are non-standard types.

__num_get_type

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type
```

These are non-standard types.

__num_put_type

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type
```

These are non-standard types.

char_type

```
template<typename _CharT, typename _Traits>
typedef _CharT std::basic_ios< _CharT, _Traits >::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```

The type of an event callback function.

Parameters

_↩ _*e*	One of the members of the event enum.
_↩ _*b*	Reference to the ios_base object.
_↩ _*i*	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```

This is a bitmask type.

_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right

- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

int_type

```
template<typename _CharT, typename _Traits>
typedef _Traits::int_type std::basic_ios< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

iostate

```
typedef _Ios_Iostate std::ios_base::iostate  [inherited]
```

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

off_type

```
template<typename _CharT, typename _Traits>
typedef _Traits::off_type std::basic_ios< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

openmode

```
typedef _Ios_Openmode std::ios_base::openmode  [inherited]
```

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate

- binary
- in
- out
- trunc

pos_type

```
template<typename _CharT, typename _Traits>
typedef _Traits::pos_type std::basic_ios< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir  [inherited]
```

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

traits_type

```
template<typename _CharT, typename _Traits>
typedef _Traits std::basic_ios< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

6.239.3 Member Enumeration Documentation

event

```
enum std::ios_base::event  [inherited]
```

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.239.4 Constructor & Destructor Documentation

basic_ios() [1/2]

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::basic_ios (
            basic_streambuf< _CharT, _Traits > * __sb)  [inline], [explicit]
```

Constructor performs initialization.
The parameter is passed by derived streams.
Referenced by copyfmt().

~basic_ios()

```
template<typename _CharT, typename _Traits>
virtual std::basic_ios< _CharT, _Traits >::~basic_ios ()  [inline], [virtual]
```

Empty.
The destructor does nothing. More specifically, it does not destroy the streambuf held by rdbuf().

basic_ios() [2/2]

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::basic_ios ()  [inline], [protected]
```

Empty.
The default constructor does nothing and is not normally accessible to users.

6.239.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit)
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().

Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs)
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >:: std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::↩locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea
std::basic_ios< char_type, traits_type >::basic_ios(), std::basic_istream< char_type, traits_type >::basic_istream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_istringstream< char >::basic_istringstream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ostream< char_type, traits_type >::basic_ostream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_ostringstream< char >::basic_ostringstream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _*ix*	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```
Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```
Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```
Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const  [inline],
[nodiscard]
```
Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Referenced by clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), imbue(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits > std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tel std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is ios_base::↩ adjustfield.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
             iostate __state)  [inline]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
             bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/↩
libstdc++/manual/fstreams.html#std.io.filestreams.binary

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html
Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```
Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide)  [inline], [inherited]
```
Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

xalloc()

```
int std::ios_base::xalloc () throw ( )  [static], [inherited]
```
Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.239.6 Member Data Documentation

adjustfield

```
const fmtflags std::ios_base::adjustfield  [static], [inherited]
```
A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app  [static], [inherited]
```
Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

const openmode std::ios_base::ate [static], [inherited]
Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

const iostate std::ios_base::badbit [static], [inherited]
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

const fmtflags std::ios_base::basefield [static], [inherited]
A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

const seekdir std::ios_base::beg [static], [inherited]
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

const openmode std::ios_base::binary [static], [inherited]
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩ filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract `bool` in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

const seekdir std::ios_base::cur [static], [inherited]
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

```
const fmtflags std::ios_base::dec  [static], [inherited]
```

Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera
and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

```
const seekdir std::ios_base::end  [static], [inherited]
```

Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

```
const iostate std::ios_base::eofbit  [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:
std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(),
std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits
std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit  [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type,
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(),
std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(),
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed  [static], [inherited]
```

Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.

Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char > std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::p std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits > std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

```
const fmtflags std::ios_base::internal  [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by std::internal().

left

```
const fmtflags std::ios_base::left  [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

`const fmtflags std::ios_base::oct [static], [inherited]`
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

`const openmode std::ios_base::out [static], [inherited]`
Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

`const fmtflags std::ios_base::right [static], [inherited]`
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`
Skips leading white space before certain input operations.

Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

trunc

```
const openmode std::ios_base::trunc  [static], [inherited]
```
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf  [static], [inherited]
```
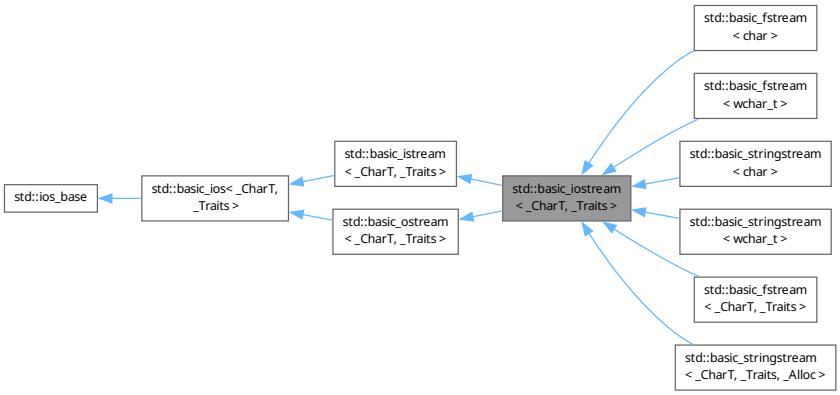
Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().



uppercase

```
const fmtflags std::ios_base::uppercase  [static], [inherited]
```
Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

- basic_ios.h
- basic_ios.tcc

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))
- __ostream_type & operator<< (ios_base &(*__pf)(ios_base &))

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (long __n)
- __ostream_type & operator<< (unsigned long __n)
- __ostream_type & operator<< (bool __n)
- __ostream_type & operator<< (short __n)
- __ostream_type & operator<< (unsigned short __n)
- __ostream_type & operator<< (int __n)
- __ostream_type & operator<< (unsigned int __n)
- __ostream_type & operator<< (long long __n)
- __ostream_type & operator<< (unsigned long long __n)

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.240.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_iostream< _CharT, _Traits >

Template class basic_iostream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class multiply inherits from the input and output stream classes simply to provide a single interface.

6.240.2 Member Typedef Documentation

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```
The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```
This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed

- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

```
typedef _Ios_Iostate std::ios_base::iostate  [inherited]
```

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

```
typedef _Ios_Openmode std::ios_base::openmode  [inherited]
```

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir  [inherited]
```

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.240.3 Member Enumeration Documentation

event

```
enum std::ios_base::event  [inherited]
```

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.240.4 Constructor & Destructor Documentation

basic_iostream()

```
template<typename _CharT, typename _Traits>
std::basic_iostream< _CharT, _Traits >::basic_iostream (
            basic_streambuf< _CharT, _Traits > * __sb)  [inline], [explicit]
```

Constructor does nothing.
Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

~basic_iostream()

```
template<typename _CharT, typename _Traits>
virtual std::basic_iostream< _CharT, _Traits >::~basic_iostream ()  [inline], [virtual]
```

Destructor does nothing.

6.240.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with __*fmtfl*.

flush()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush ()  [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::flush().

gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const  [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().
Referenced by std::basic_istream< char_type, traits_type >::get(), and std::basic_istream< char_type, traits_type >::get().

get() [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb)  [inline], [inherited]
```

Extraction into another streambuf.

Parameters

__*sb*	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).

get() [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim)  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

get() [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c)  [inherited]
```

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

get() [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get(__s,__n,widen('\n'))`.

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
             char_type * __s,
             streamsize __n)  [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns getline(__s,__n,widen('\n')).

getline() [2/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
             char_type * __s,
             streamsize __n,
             char_type __delim)  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

getline() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
             char_type * __s,
             streamsize __n,
             char_type __delim)  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
References _M_gcount, and std::ios_base::goodbit.
Referenced by std::basic_istream< char_type, traits_type >::getline().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

ignore() [1/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >::sbumpc().
Referenced by std::basic_istream< char_type, traits_type >::ignore().

ignore() [2/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n)  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

ignore() [3/4]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            char __delim)  [inline], [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

ignore() [4/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim)  [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide four overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea
std::basic_ios< char_type, traits_type >::basic_ios(), std::basic_istream< char_type, traits_type >::basic_istream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_istringstream< char >::basic_istringstream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ostream< char_type, traits_type >::basic_ostream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_ostringstream< char >::basic_ostringstream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator<<() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(* __pf )(__ostream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb)  [inherited]
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p)  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            short __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
References basic_ostream(), std::ios_base::badbit, std::ostreambuf_iterator< _CharT, _Traits >::failed(), std::ios_base::goodbit, std::num_put< _CharT, _OutIter >::put(), std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator<<() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned int __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned short __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator>>() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws. For more information, see the iomanip header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __istream_type &(* __pf )(__istream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws. For more information, see the iomanip header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb)  [inherited]
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the __sb streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or

- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

operator>>() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            bool & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            double & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            float & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            int & __n)  [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

operator>>() [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long double & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (

```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned short & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            void *& __p)  [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void )  [inherited]
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

put()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c)  [inherited]
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::endl(), and std::ends().

putback()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
            char_type __c)  [inherited]
```

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

∗this

If rdbuf() is not null, calls rdbuf()->sputbackc(c).
If rdbuf() is null or if sputbackc() fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().
Referenced by std::operator<<().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const  [inline],
[nodiscard], [inherited]
```

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Referenced by clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), imbue(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits > std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tel std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

read()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount.

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters

- if A > 0, extracts min(A,n)

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::
and std::basic_ios< _CharT, _Traits >::setstate().

register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            off_type __off,
            ios_base::seekdir __dir)  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If fail() is not true, calls rdbuf()->pubseekoff(__off,__dir). If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to gcount().

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(
std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits
and std::basic_ios< _CharT, _Traits >::setstate().

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos)  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(
std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits
and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir)  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(),
and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos)  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

sync()

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
            void )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/↩
libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellg()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void )  [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

tellp()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()  [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
References std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf()

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unget()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void )  [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().
Referenced by std::__detail::operator>>().

unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
             streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

write()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
             const char_type * __s,
             streamsize __n)  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.

_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
int std::ios_base::xalloc () throw ( )   [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.240.6 Member Data Documentation

_M_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount  [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see gcount().
Referenced by get(), get(), get(), get(), getline(), ignore(), ignore(), ignore(), putback(), read(), readsome(), and unget().

adjustfield

```
const fmtflags std::ios_base::adjustfield  [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of setf.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app  [static], [inherited]
```

Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

const openmode std::ios_base::ate [static], [inherited]
Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

const iostate std::ios_base::badbit [static], [inherited]
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

const fmtflags std::ios_base::basefield [static], [inherited]
A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

const seekdir std::ios_base::beg [static], [inherited]
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

const openmode std::ios_base::binary [static], [inherited]
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩ filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract `bool` in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

const seekdir std::ios_base::cur [static], [inherited]
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera
and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:
std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(),
std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits
std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname

and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.

Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char > std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::p std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits > std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

```
const fmtflags std::ios_base::internal  [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by std::internal().

left

```
const fmtflags std::ios_base::left  [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

```
const fmtflags std::ios_base::oct  [static], [inherited]
```
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

```
const openmode std::ios_base::out  [static], [inherited]
```
Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

```
const fmtflags std::ios_base::right  [static], [inherited]
```
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

```
const fmtflags std::ios_base::scientific  [static], [inherited]
```
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

```
const fmtflags std::ios_base::showbase  [static], [inherited]
```
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

```
const fmtflags std::ios_base::showpoint  [static], [inherited]
```
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

```
const fmtflags std::ios_base::showpos  [static], [inherited]
```
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

```
const fmtflags std::ios_base::skipws  [static], [inherited]
```
Skips leading white space before certain input operations.

Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

trunc

```
const openmode std::ios_base::trunc  [static], [inherited]
```
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf  [static], [inherited]
```
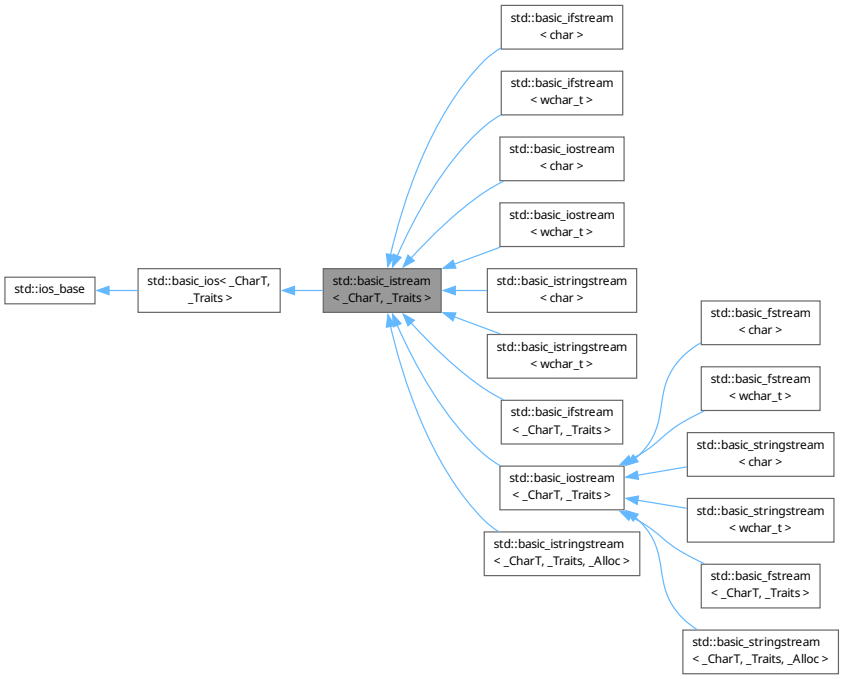
Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().



uppercase

```
const fmtflags std::ios_base::uppercase  [static], [inherited]
```
Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

6.241.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_istream< _CharT, _Traits >

Template class basic_istream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual input.

6.241.2 Member Typedef Documentation

__num_put_type

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type  [inherited]
```

These are non-standard types.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```
The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```
This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

```
typedef _Ios_Iostate std::ios_base::iostate  [inherited]
```

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

```
typedef _Ios_Openmode std::ios_base::openmode  [inherited]
```

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir  [inherited]
```

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.241.3 Member Enumeration Documentation

event

```
enum std::ios_base::event  [inherited]
```

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.241.4 Constructor & Destructor Documentation

basic_istream()

```
template<typename _CharT, typename _Traits>
std::basic_istream< _CharT, _Traits >::basic_istream (
            __streambuf_type * __sb)  [inline], [explicit]
```

Base constructor.
This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry().

~basic_istream()

```
template<typename _CharT, typename _Traits>
virtual std::basic_istream< _CharT, _Traits >::~basic_istream ()  [inline], [virtual]
```

Base destructor.
This does very little apart from providing a virtual base dtor.

6.241.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
            iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const  [inline]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
            void )
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().
Referenced by std::basic_istream< char_type, traits_type >::get(), and std::basic_istream< char_type, traits_type >::get().

get() [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb)  [inline]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).

get() [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim)
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into __*sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals __*delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

get() [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c)
```

Simple extraction.

Parameters

_↩ _c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in __*c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

get() [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n)  [inline]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

*this

Returns `get(__s,__n,widen('\n'))`.

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim)
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n)  [inline]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen('\n'))`.

getline() [2/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim)
```

Explicit specialization declarations, defined in src/istream.cc.

getline() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim)
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
References _M_gcount, and std::ios_base::goodbit.
Referenced by std::basic_istream< char_type, traits_type >::getline().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```
Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```
Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

ignore() [1/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void )
```
Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >::sbumpc().
Referenced by std::basic_istream< char_type, traits_type >::ignore().

ignore() [2/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n)
```
Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

ignore() [3/4]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            char __delim)  [inline]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

ignore() [4/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim)
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide four overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea

std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator>>() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(* __pf )(__ios_type &))  [inline]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.

operator>>() [2/17]

```

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb)
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the __sb streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            bool & __n)  [inline]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            double & __f)  [inline]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            float & __f)  [inline]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [7/17]

```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long & __n)  [inline]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long long & __n)  [inline]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned short & __n)  [inline]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            void *& __p)  [inline]
```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void )
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

putback()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
            char_type __c)
```

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().
Referenced by std::operator<<().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const  [inline],
[nodiscard], [inherited]
```

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Referenced by clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), imbue(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits > std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tel std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

read()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n)
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount.

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n)
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters

- if A > 0, extracts min(A,n)

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::
and std::basic_ios< _CharT, _Traits >::setstate().

register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            off_type __off,
            ios_base::seekdir __dir)
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If fail() is not true, calls rdbuf()->pubseekoff(__off,__dir). If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to gcount().

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(
std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits
and std::basic_ios< _CharT, _Traits >::setstate().

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos)
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

sync()

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
            void )
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(),
std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellg()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void )
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unget()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void )
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().
Referenced by std::__detail::operator>>().

unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
             streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

xalloc()

```
int std::ios_base::xalloc () throw ( )  [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.241.6 Member Data Documentation

_M_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount  [protected]
```

The number of characters extracted in the previous unformatted function; see gcount().
Referenced by get(), get(), get(), get(), getline(), ignore(), ignore(), ignore(), putback(), read(), readsome(), and unget().

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```
A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app [static], [inherited]
```
Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

```
const openmode std::ios_base::ate [static], [inherited]
```
Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```
A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

```
const openmode std::ios_base::binary [static], [inherited]
```
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

```
const fmtflags std::ios_base::boolalpha  [static], [inherited]
```
Insert/extract `bool` in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

```
const seekdir std::ios_base::cur  [static], [inherited]
```
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

```
const fmtflags std::ios_base::dec  [static], [inherited]
```
Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

```
const seekdir std::ios_base::end  [static], [inherited]
```
Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

```
const iostate std::ios_base::eofbit  [static], [inherited]
```
Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >: std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit  [static], [inherited]
```
Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char > std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(),

std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed  [static], [inherited]
```

Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char > std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pb std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits > std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

`const fmtflags std::ios_base::internal [static], [inherited]`
Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Referenced by std::internal().

left

`const fmtflags std::ios_base::left [static], [inherited]`
Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

`const fmtflags std::ios_base::oct [static], [inherited]`
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

`const openmode std::ios_base::out [static], [inherited]`
Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

`const fmtflags std::ios_base::right [static], [inherited]`
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`
Skips leading white space before certain input operations.
Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

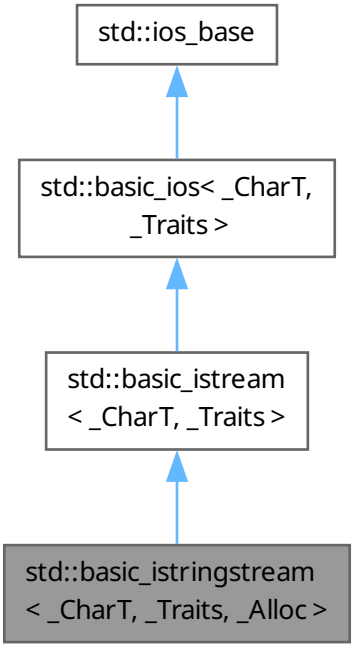
trunc

`const openmode std::ios_base::trunc [static], [inherited]`
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`
Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase



`const fmtflags std::ios_base::uppercase [static], [inherited]`
Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

6.242.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_istringstream< _CharT, _Traits, _Alloc >

Controlling input for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports reading from objects of type std::basic_string, using the inherited functions from std::basic_istream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.

6.242.2 Member Typedef Documentation

__num_put_type

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type  [inherited]
```

These are non-standard types.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.

_↩ _*i*	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

`typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

typedef _Ios_Iostate std::ios_base::iostate [inherited]
This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

typedef _Ios_Openmode std::ios_base::openmode [inherited]
This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.242.3 Member Enumeration Documentation

event

enum std::ios_base::event [inherited]
The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.242.4 Constructor & Destructor Documentation

basic_istringstream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream ()  [inline]
```

Default constructor starts with an empty string buffer.
Initializes sb using in, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

basic_istringstream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream (
            ios_base::openmode __mode)  [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

ios_base::in is automatically included in *__mode*.
Initializes sb using __mode|in, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

basic_istringstream() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream (
            const __string_type & __str,
            ios_base::openmode __mode = ios_base::in)  [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

ios_base::in is automatically included in *mode*.
Initializes sb using *str* and mode|in, and passes &sb to the base class initializer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

~basic_istringstream()

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istringstream< _CharT, _Traits, _Alloc >::~basic_istringstream ()  [inline]
```

The destructor does nothing.
The buffer is deallocated by the stringbuf object, not the formatting stream.

6.242.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
```

```
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >:
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
             char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const  [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit,
std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().
Referenced by std::basic_istream< char_type, traits_type >::get(), and std::basic_istream< char_type, traits_type >::get().

get() [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb)  [inline], [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns `get`(__sb,widen('\n')).

get() [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim)  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

get() [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c)  [inherited]
```

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in __c. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

get() [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
             char_type * __s,
             streamsize __n)  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

*this

Returns get(__s,__n,widen('\n')).

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
             char_type * __s,
             streamsize __n,
             char_type __delim)  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in __s.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into __*s* until one of the following happens:

- __n-1 characters are stored
- the input sequence reaches EOF
- the next character equals __*delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
             char_type * __s,
             streamsize __n)  [inline], [inherited]
```

String extraction.

Parameters

_↩ _*s*	A character array in which to store the data.
_↩ _*n*	Maximum number of characters to extract.

Returns

*this

Returns getline(__s,__n,widen('\n')).

getline() [2/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
             char_type * __s,
             streamsize __n,
             char_type __delim)  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

getline() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
             char_type * __s,
             streamsize __n,
             char_type __delim)  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
References _M_gcount, and std::ios_base::goodbit.
Referenced by std::basic_istream< char_type, traits_type >::getline().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

ignore() [1/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >::sbumpc().
Referenced by std::basic_istream< char_type, traits_type >::ignore().

ignore() [2/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n)  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

ignore() [3/4]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            char __delim)  [inline], [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

ignore() [4/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim)  [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if __*n* != `std::numeric_limits<int>::max()`, __*n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals __*delim* (in this case, the character is extracted); note that this condition will never occur if __*delim* equals `traits::eof()`.

NB: Provide four overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__*loc*	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩
html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b

std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator>>() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __istream_type &(* __pf )(__istream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb)  [inherited]
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

operator>>() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            bool & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            double & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            float & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            int & __n)  [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws. For more information, see the iomanip header.

operator>>() [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long double & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            long long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [12/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            short & __n)  [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
References std::ios_base::badbit, std::ios_base::failbit, std::num_get< _CharT, _InIter >::get(), std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator>>() [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned int & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned short & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            void *& __p)  [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void )  [inherited]
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

putback()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
            char_type __c)  [inherited]
```

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().
Referenced by std::operator<<().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type * std::basic_istringstream< _CharT, _Traits, _Alloc >::rdbuf () const  [inline],
[nodiscard]
```

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >::p std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

read()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into __*s* until one of the following happens:

- __*n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount.

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into __*s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::
and std::basic_ios< _CharT, _Traits >::setstate().

register_callback()

```
void std::ios_base::register_callback (
             event_callback __fn,
             int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
             off_type __off,
             ios_base::seekdir __dir)  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits and std::basic_ios< _CharT, _Traits >::setstate().

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos)  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_istringstream< _CharT, _Traits, _Alloc >::str () const &  [inline],
[nodiscard]
```

Copying out the string buffer.

Returns

`rdbuf()->str()`

str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_istringstream< _CharT, _Traits, _Alloc >::str (
            const __string_type & __s)  [inline]
```

Setting a new buffer.

Parameters

_↩ _s	The string to use as a new sequence.

Calls `rdbuf()->str(s)`.

sync()

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
            void )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/↩ libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellg()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void )  [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unget()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void )  [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().
Referenced by std::__detail::operator>>().

unsetf()

```
void std::ios_base::unsetf (
             fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
             char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html
Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

xalloc()

```
int std::ios_base::xalloc () throw ( )   [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.242.6 Member Data Documentation

_M_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount  [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see gcount().
Referenced by get(), get(), get(), get(), getline(), ignore(), ignore(), ignore(), putback(), read(), readsome(), and unget().

adjustfield

```
const fmtflags std::ios_base::adjustfield  [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app  [static], [inherited]
```

Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

const openmode std::ios_base::ate [static], [inherited]
Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

const iostate std::ios_base::badbit [static], [inherited]
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

const fmtflags std::ios_base::basefield [static], [inherited]
A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

const seekdir std::ios_base::beg [static], [inherited]
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

const openmode std::ios_base::binary [static], [inherited]
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩ filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract `bool` in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

const seekdir std::ios_base::cur [static], [inherited]
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera
and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:
std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(),
std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits
std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type,
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(),
std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(),
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.

Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char > std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::p std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits > std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

```
const fmtflags std::ios_base::internal  [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by std::internal().

left

```
const fmtflags std::ios_base::left  [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

```
const fmtflags std::ios_base::oct  [static], [inherited]
```
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

```
const openmode std::ios_base::out  [static], [inherited]
```
Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

```
const fmtflags std::ios_base::right  [static], [inherited]
```
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

```
const fmtflags std::ios_base::scientific  [static], [inherited]
```
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

```
const fmtflags std::ios_base::showbase  [static], [inherited]
```
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

```
const fmtflags std::ios_base::showpoint  [static], [inherited]
```
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

```
const fmtflags std::ios_base::showpos  [static], [inherited]
```
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

```
const fmtflags std::ios_base::skipws  [static], [inherited]
```
Skips leading white space before certain input operations.

Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

trunc

```
const openmode std::ios_base::trunc  [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf  [static], [inherited]
```

Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase

```
const fmtflags std::ios_base::uppercase  [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

- sstream

6.243 std::basic_ofstream< _CharT, _Traits > Class Template Reference

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.243.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ofstream< _CharT, _Traits >

Controlling output for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from named files, using the inherited functions from std::basic_ostream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.

6.243.2 Member Typedef Documentation

__num_get_type

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type  [inherited]
```

These are non-standard types.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec

- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

`typedef _Ios_Iostate std::ios_base::iostate [inherited]`
This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

`typedef _Ios_Openmode std::ios_base::openmode [inherited]`
This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir  [inherited]
```

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.243.3 Member Enumeration Documentation

event

```
enum std::ios_base::event  [inherited]
```

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.243.4 Constructor & Destructor Documentation

basic_ofstream() [1/4]

```
template<typename _CharT, typename _Traits>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream ()  [inline]
```

Default constructor.
Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).

basic_ofstream() [2/4]

```
template<typename _CharT, typename _Traits>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
            const char * __s,
            ios_base::openmode __mode = ios_base::out)  [inline], [explicit]
```

Create an output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

ios_base::out is automatically included in *__mode*.

basic_ofstream() [3/4]

```
template<typename _CharT, typename _Traits>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::out)  [inline], [explicit]
```

Create an output file stream.

Parameters

__s	std::string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::out` is automatically included in *__mode*.

basic_ofstream() [4/4]

```
template<typename _CharT, typename _Traits>
template<typename _Path, typename _Require = _If_fs_path<_Path>>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
            const _Path & __s,
            ios_base::openmode __mode = ios_base::out)  [inline]
```

Create an output file stream.

Parameters

__s	filesystem::path specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::out` is automatically included in *__mode*.

~basic_ofstream()

```
template<typename _CharT, typename _Traits>
std::basic_ofstream< _CharT, _Traits >::~basic_ofstream ()  [inline]
```

The destructor does nothing.
The file is closed by the filebuf object, not the formatting stream.

6.243.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

close()

```
template<typename _CharT, typename _Traits>
void std::basic_ofstream< _CharT, _Traits >::close ()  [inline]
```

Close the file.
Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

flush()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush ()  [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::flush().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(),
and std::__detail::operator>>().

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea
std::basic_ios< char_type, traits_type >::basic_ios(), std::basic_istream< char_type, traits_type >::basic_istream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_istringstream< char >::basic_istringstream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ostream< char_type, traits_type >::basic_ostream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_ostringstream< char >::basic_ostringstream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

is_open()

```
template<typename _CharT, typename _Traits>
bool std::basic_ofstream< _CharT, _Traits >::is_open ()  [inline], [nodiscard]
```

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html

open() [1/3]

```
template<typename _CharT, typename _Traits>
template<typename _Path>
_If_fs_path< _Path, void > std::basic_ofstream< _CharT, _Traits >::open (
            const _Path & __s,
            ios_base::openmode __mode = ios_base::out)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file, as a filesystem::path.

__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

open() [2/3]

```
template<typename _CharT, typename _Traits>
void std::basic_ofstream< _CharT, _Traits >::open (
            const char * __s,
            ios_base::openmode __mode = ios_base::out)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.
Referenced by std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), and std::basic_ofstream< char >::open().

open() [3/3]

```
template<typename _CharT, typename _Traits>
void std::basic_ofstream< _CharT, _Traits >::open (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::out)  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out)`. If that function fails, `failbit` is set in the stream's error state.

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
```

bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [nodiscard], [inherited]
The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator<<() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(* __pf )(__ios_type &)) [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(* __pf )(__ostream_type &)) [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p)  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            short __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
References basic_ostream(), std::ios_base::badbit, std::ostreambuf_iterator< _CharT, _Traits >::failed(), std::ios_base::goodbit, std::num_put< _CharT, _OutIter >::put(), std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator<<() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned int __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned short __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

put()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c)  [inherited]
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

∗this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::endl(), and std::ends().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
__filebuf_type * std::basic_ofstream< _CharT, _Traits >::rdbuf () const  [inline], [nodiscard]
```

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >::p std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

register_callback()

```
void std::ios_base::register_callback (
             event_callback __fn,
             int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.

__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir)  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos)  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellp()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()  [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
References std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf()

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unsetf()

```
void std::ios_base::unsetf (
             fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
             char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

write()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n)  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
int std::ios_base::xalloc () throw ( )   [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.243.6 Member Data Documentation

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩ filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract bool in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

const seekdir std::ios_base::cur [static], [inherited]
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

const fmtflags std::ios_base::dec [static], [inherited]
Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

const seekdir std::ios_base::end [static], [inherited]
Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

const iostate std::ios_base::eofbit [static], [inherited]
Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >: std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

const iostate std::ios_base::failbit [static], [inherited]
Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char > std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(),

std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed  [static], [inherited]
```

Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char > std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pb std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits > std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

const fmtflags std::ios_base::internal [static], [inherited]
Adds fill characters at a designated internal point in certain generated output, or identical to right if no such point is designated.
Referenced by std::internal().

left

const fmtflags std::ios_base::left [static], [inherited]
Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

const fmtflags std::ios_base::oct [static], [inherited]
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

const openmode std::ios_base::out [static], [inherited]
Open for output. Default for ofstream and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

const fmtflags std::ios_base::right [static], [inherited]
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

const fmtflags std::ios_base::scientific [static], [inherited]
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

const fmtflags std::ios_base::showbase [static], [inherited]
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

```
const fmtflags std::ios_base::showpoint  [static], [inherited]
```
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

```
const fmtflags std::ios_base::showpos  [static], [inherited]
```
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

```
const fmtflags std::ios_base::skipws  [static], [inherited]
```
Skips leading white space before certain input operations.
Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

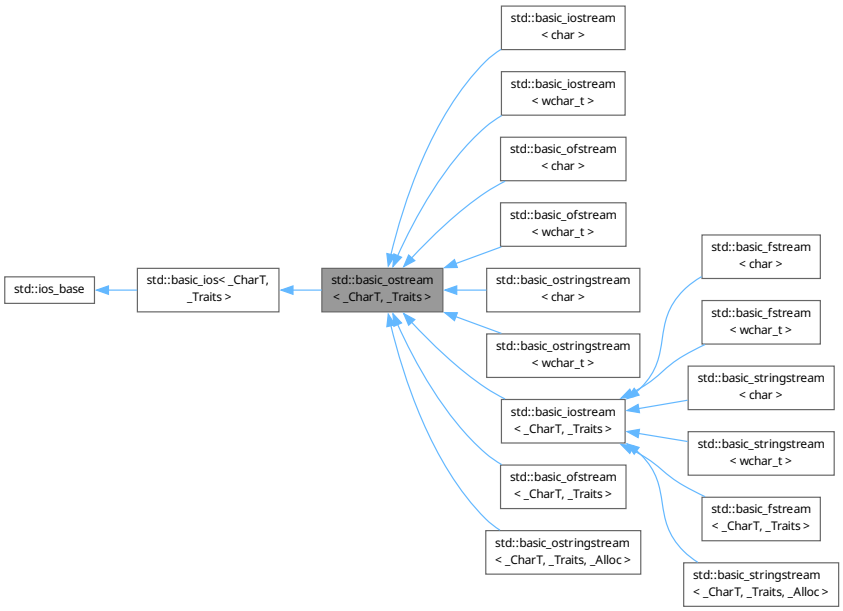
trunc

```
const openmode std::ios_base::trunc  [static], [inherited]
```
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf  [static], [inherited]
```
Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase



```
const fmtflags std::ios_base::uppercase  [static], [inherited]
```
Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

- fstream

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.244.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ostream< _CharT, _Traits >

Template class basic_ostream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual output.

6.244.2 Member Typedef Documentation

__num_get_type

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type  [inherited]
```

These are non-standard types.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```
The type of an event callback function.

Parameters

_↩ _e	One of the members of the event enum.
_↩ _b	Reference to the ios_base object.
_↩ _i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```
This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

`typedef _Ios_Iostate std::ios_base::iostate [inherited]`
This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

`typedef _Ios_Openmode std::ios_base::openmode [inherited]`
This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

`typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`
This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.244.3 Member Enumeration Documentation

event

`enum std::ios_base::event [inherited]`
The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.244.4 Constructor & Destructor Documentation

basic_ostream()

```
template<typename _CharT, typename _Traits>
std::basic_ostream< _CharT, _Traits >::basic_ostream (
            __streambuf_type * __sb)  [inline], [explicit]
```

Base constructor.
This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and operator<<().

~basic_ostream()

```
template<typename _CharT, typename _Traits>
virtual std::basic_ostream< _CharT, _Traits >::~basic_ostream ()  [inline], [virtual]
```

Base destructor.
This does very little apart from providing a virtual base dtor.

6.244.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
            iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::o
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

flush()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush ()
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::flush().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b

std::basic_istringstream< char >::basic_istringstream(), std::basic_istringstream< char >::basic_istringstream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ostream< char_type, traits_type >::basic_ostream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_ostringstream< char >::basic_ostringstream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator<<() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(* __pf )(__ios_type &))  [inline]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(* __pf )(__ostream_type &))  [inline]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb)
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from __sb and inserted into *this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from __sb, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n)  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p)  [inline]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f)  [inline]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f)  [inline]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n)
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(* __pf )(ios_base &))  [inline]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n)  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f)  [inline]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n)  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            short __n)
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
References basic_ostream(), std::ios_base::badbit, std::ostreambuf_iterator< _CharT, _Traits >::failed(), std::ios_base::goodbit, std::num_put< _CharT, _OutIter >::put(), std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator<<() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned int __n)  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long __n)  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long long __n)  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned short __n)  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

put()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c)
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::endl(), and std::ends().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _*ix*	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf () const  [inline],
[nodiscard], [inherited]
```

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Referenced by clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), imbue(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits > std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tel std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >::| std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

register_callback()

```
void std::ios_base::register_callback (
             event_callback __fn,
             int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
             off_type __off,
             ios_base::seekdir __dir)
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos)
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
             iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
             bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellp()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
References std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf()

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
             basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unsetf()

```
void std::ios_base::unsetf (
             fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html
Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

write()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n)
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
int std::ios_base::xalloc () throw ( )   [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.244.6 Member Data Documentation

adjustfield

```
const fmtflags std::ios_base::adjustfield  [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of setf.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app  [static], [inherited]
```

Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

const openmode std::ios_base::ate [static], [inherited]
Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

const iostate std::ios_base::badbit [static], [inherited]
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

const fmtflags std::ios_base::basefield [static], [inherited]
A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

const seekdir std::ios_base::beg [static], [inherited]
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

const openmode std::ios_base::binary [static], [inherited]
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩ filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract `bool` in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

const seekdir std::ios_base::cur [static], [inherited]
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

```
const fmtflags std::ios_base::dec  [static], [inherited]
```
Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera
and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

```
const seekdir std::ios_base::end  [static], [inherited]
```
Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

```
const iostate std::ios_base::eofbit  [static], [inherited]
```
Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:
std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(),
std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits
std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit  [static], [inherited]
```
Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type,
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(),
std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(),
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed  [static], [inherited]
```
Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```
A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```

Indicates all is well.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```

Open for input. Default for `ifstream` and fstream.

Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char > std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::p std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

```
const fmtflags std::ios_base::internal  [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by std::internal().

left

```
const fmtflags std::ios_base::left  [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

```
const fmtflags std::ios_base::oct  [static], [inherited]
```
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

```
const openmode std::ios_base::out  [static], [inherited]
```
Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o
std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

```
const fmtflags std::ios_base::right  [static], [inherited]
```
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

```
const fmtflags std::ios_base::scientific  [static], [inherited]
```
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

```
const fmtflags std::ios_base::showbase  [static], [inherited]
```
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

```
const fmtflags std::ios_base::showpoint  [static], [inherited]
```
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

```
const fmtflags std::ios_base::showpos  [static], [inherited]
```
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

```
const fmtflags std::ios_base::skipws  [static], [inherited]
```
Skips leading white space before certain input operations.

Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

trunc

```
const openmode std::ios_base::trunc  [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf  [static], [inherited]
```

Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase

```
const fmtflags std::ios_base::uppercase  [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

- iosfwd.h
- ostream.h
- ostream.tcc

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (unsigned long long __n)

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.245.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_ostringstream< _CharT, _Traits, _Alloc >

Controlling output for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports writing to objects of type std::basic_string, using the inherited functions from std::basic_ostream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.

6.245.2 Member Typedef Documentation

__num_get_type

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type  [inherited]
```

These are non-standard types.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```

The type of an event callback function.

Parameters

_↩ _e	One of the members of the event enum.
_↩ _b	Reference to the ios_base object.
_↩ _i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```

This is a bitmask type.

_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal

- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

`typedef _Ios_Iostate std::ios_base::iostate [inherited]`
This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

`typedef _Ios_Openmode std::ios_base::openmode [inherited]`
This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir  [inherited]
```

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

6.245.3 Member Enumeration Documentation

event

```
enum std::ios_base::event  [inherited]
```

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.245.4 Constructor & Destructor Documentation

basic_ostringstream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream ()  [inline]
```

Default constructor starts with an empty string buffer.
Initializes sb using mode|out, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

basic_ostringstream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
            ios_base::openmode __mode)  [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

ios_base::out is automatically included in *mode*.
Initializes sb using mode|out, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

basic_ostringstream() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
            const __string_type & __str,
            ios_base::openmode __mode = ios_base::out)  [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.
Initializes `sb` using *str* and `mode|out`, and passes `&sb` to the base class initializer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

~basic_ostringstream()

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::~basic_ostringstream ()  [inline]
```

The destructor does nothing.
The buffer is deallocated by the stringbuf object, not the formatting stream.

6.245.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
            iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

flush()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush ()  [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::flush().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(),
and std::__detail::operator>>().

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea
std::basic_ios< char_type, traits_type >::basic_ios(), std::basic_istream< char_type, traits_type >::basic_istream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_istringstream< char >::basic_istringstream(),
std::basic_istringstream< char >::basic_istringstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ostream< char_type, traits_type >::basic_ostream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_ostringstream< char >::basic_ostringstream(),
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringstream< char >::basic_stringstream(),
std::basic_stringstream< char >::basic_stringstream(), and std::basic_stringstream< char >::basic_stringstream().

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional l10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator<<() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(* __pf )(__ostream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb)  [inherited]
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from __sb and inserted into *this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from __sb, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p)  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            short __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
References basic_ostream(), std::ios_base::badbit, std::ostreambuf_iterator< _CharT, _Traits >::failed(), std::ios_base::goodbit, std::num_put< _CharT, _OutIter >::put(), std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator<<() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned int __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned short __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

put()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c)  [inherited]
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::endl(), and std::ends().

pword()

```
void *& std::ios_base::pword (
            int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type * std::basic_ostringstream< _CharT, _Traits, _Alloc >::rdbuf () const  [inline],
[nodiscard]
```

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >::| std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir)  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos)  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_ostringstream< _CharT, _Traits, _Alloc >::str () const &  [inline],
[nodiscard]
```

Copying out the string buffer.

Returns

```
rdbuf()->str()
```

str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_ostringstream< _CharT, _Traits, _Alloc >::str (
            const __string_type & __s)  [inline]
```

Setting a new buffer.

Parameters

_↩ _s	The string to use as a new sequence.

Calls `rdbuf()->str(s)`.

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/↩ libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellp()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()  [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
References std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf()

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html
Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

write()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n)  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
int std::ios_base::xalloc () throw ( )   [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.245.6 Member Data Documentation

adjustfield

```
const fmtflags std::ios_base::adjustfield  [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of setf.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

const openmode std::ios_base::app [static], [inherited]
Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

const openmode std::ios_base::ate [static], [inherited]
Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

const iostate std::ios_base::badbit [static], [inherited]
Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

const fmtflags std::ios_base::basefield [static], [inherited]
A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

const seekdir std::ios_base::beg [static], [inherited]
Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

const openmode std::ios_base::binary [static], [inherited]
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↩filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract `bool` in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:: std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char > std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits > and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```
A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```
Indicates all is well.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >: std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore() std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >:: std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```
Converts integer input or generates integer output in hexadecimal base.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```
Open for input. Default for `ifstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char > std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::p std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits > std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

```
const fmtflags std::ios_base::internal  [static], [inherited]
```
Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Referenced by std::internal().

left

```
const fmtflags std::ios_base::left  [static], [inherited]
```
Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x

oct

```
const fmtflags std::ios_base::oct  [static], [inherited]
```
Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

```
const openmode std::ios_base::out  [static], [inherited]
```
Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs
std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),

std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(),
std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha
std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

```
const fmtflags std::ios_base::right  [static], [inherited]
```
Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

```
const fmtflags std::ios_base::scientific  [static], [inherited]
```
Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

```
const fmtflags std::ios_base::showbase  [static], [inherited]
```
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

```
const fmtflags std::ios_base::showpoint  [static], [inherited]
```
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

```
const fmtflags std::ios_base::showpos  [static], [inherited]
```
Generates a + sign in non-negative generated numeric output.

Referenced by std::noshowpos(), and std::showpos().

skipws

```
const fmtflags std::ios_base::skipws  [static], [inherited]
```

Skips leading white space before certain input operations.
Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

trunc

```
const openmode std::ios_base::trunc  [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf  [static], [inherited]
```

Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase

```
const fmtflags std::ios_base::uppercase  [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

6.246.1 Detailed Description

template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
class std::basic_regex< _Ch_type, _Rx_traits >

A regular expression.
Specializations of this class template represent regular expressions constructed from sequences of character type _↩ Ch_type. Use the std::regex typedef for std::basic_regex<char>.
A character sequence passed to the constructor will be parsed according to the chosen grammar, and used to create a state machine representing the regular expression. The regex object can then be passed to algorithms such as std::regex_match to match sequences of characters.
The syntax_option_type flag passed to the constructor selects from one of the supported regular expression grammars. The default is ECMAScript and the others are basic, extended, awk, grep, and egrep, which are variations on POSIX regular expressions.

Since

C++11

6.246.2 Constructor & Destructor Documentation

basic_regex() [1/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex ()  [inline], [noexcept]
```

Constructs a basic regular expression that does not match any character sequence.

basic_regex() [2/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            const _Ch_type * __p,
            flag_type __f = ECMAScript)  [inline], [explicit]
```

Constructs a basic regular expression from the sequence [__p, __p + char_traits<_Ch_type>::length(__p)) interpreted according to the flags in __f.

Parameters

_↩ _p	A pointer to the start of a C-style null-terminated string containing a regular expression.
_↩ _f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __p is not a valid regular expression.

basic_regex() [3/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
```

```
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            const _Ch_type * __p,
            std::size_t __len,
            flag_type __f = ECMAScript)  [inline]
```

Constructs a basic regular expression from the sequence [p, p + len) interpreted according to the flags in `f`.

Parameters

__p	A pointer to the start of a string containing a regular expression.
__len	The length of the string containing the regular expression.
__f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if `__p` is not a valid regular expression.

basic_regex() [4/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            const basic_regex< _Ch_type, _Rx_traits > & __rhs)  [default]
```

Copy-constructs a basic regular expression.

Parameters

__rhs	A `regex` object.

basic_regex() [5/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            basic_regex< _Ch_type, _Rx_traits > && __rhs)  [default], [noexcept]
```

Move-constructs a basic regular expression.

Parameters

__rhs	A `regex` object.

basic_regex() [6/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits, typename _Ch_alloc>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
```

```
            const std::basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & __s,
            flag_type __f = ECMAScript)  [inline], [explicit]
```

Constructs a basic regular expression from the string `s` interpreted according to the flags in `f`.

Parameters

_↩ _s	A string containing a regular expression.
_↩ _f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __s is not a valid regular expression.

basic_regex() [7/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _FwdIter>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            _FwdIter __first,
            _FwdIter __last,
            flag_type __f = ECMAScript)  [inline]
```

Constructs a basic regular expression from the range [first, last) interpreted according to the flags in `f`.

Parameters

__first	The start of a range containing a valid regular expression.
__last	The end of a range containing a valid regular expression.
__f	The format flags of the regular expression.

Exceptions

regex_error	if [__first, __last) is not a valid regular expression.

basic_regex() [8/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            initializer_list< _Ch_type > __l,
```

```
            flag_type __f = ECMAScript)  [inline]
```

Constructs a basic regular expression from an initializer list.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer list.
↩ _↩ ↩ _↩ *f*	The format flags of the regular expression.

Exceptions

regex_error	if __l is not a valid regular expression.

~basic_regex()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::~basic_regex ()  [inline]
```

Destroys a basic regular expression.

6.246.3 Member Function Documentation

assign() [1/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _InputIterator>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
            _InputIterator __first,
            _InputIterator __last,
            flag_type __flags = ECMAScript)  [inline]
```

Assigns a new regular expression to a regex object.

Parameters

__first	The start of a range containing a valid regular expression.
__last	The end of a range containing a valid regular expression.
__flags	Syntax option flags.

Exceptions

regex_error	if p does not contain a valid regular expression pattern interpreted according to __flags. If regex↩ _error is thrown, the object remains unchanged.

assign() [2/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
            basic_regex< _Ch_type, _Rx_traits > && __rhs)  [inline], [noexcept]
```

Move-assigns one regular expression to another.

Parameters

__rhs	Another regular expression object.

assign() [3/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
            const _Ch_type * __p,
            flag_type __flags = ECMAScript)  [inline]
```

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

Parameters

__p	A pointer to a C-style null-terminated string containing a regular expression pattern.
__flags	Syntax option flags.

Exceptions

regex_error	if __p does not contain a valid regular expression pattern interpreted according to `__flags`. If regex_error is thrown, ∗this remains unchanged.

assign() [4/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
            const _Ch_type * __p,
            size_t __len,
            flag_type __flags = ECMAScript)  [inline]
```

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

Parameters

__p	A pointer to a C-style string containing a regular expression pattern.
__len	The length of the regular expression pattern string.
__flags	Syntax option flags.

Exceptions

regex_error	if p does not contain a valid regular expression pattern interpreted according to __flags. If regex↩ _error is thrown, *this remains unchanged.

assign() [5/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
             const basic_regex< _Ch_type, _Rx_traits > & __rhs)  [inline], [noexcept]
```

Assigns one regular expression to another.

Parameters

__rhs	Another regular expression object.

Referenced by std::basic_regex< char >::basic_regex(), std::basic_regex< char >::assign(), std::basic_regex< char >::operator=(), std::basic_regex< char >::operator=(), and std::basic_regex< char >::operator=().

assign() [6/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits, typename _Alloc>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
             const basic_string< _Ch_type, _Ch_traits, _Alloc > & __s,
             flag_type __flags = ECMAScript)  [inline]
```

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

Parameters

__s	A string containing a regular expression pattern.
__flags	Syntax option flags.

Exceptions

regex_error	if __s does not contain a valid regular expression pattern interpreted according to __flags. If regex_error is thrown, *this remains unchanged.

assign() [7/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
             initializer_list< _Ch_type > __l,
             flag_type __flags = ECMAScript)  [inline]
```

Assigns a new regular expression to a regex object.

Parameters

__l	An initializer list representing a regular expression.
__flags	Syntax option flags.

Exceptions

regex_error	if `__l` does not contain a valid regular expression pattern interpreted according to `__flags`. If regex_error is thrown, the object remains unchanged.

flags()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
flag_type std::basic_regex< _Ch_type, _Rx_traits >::flags () const  [inline], [noexcept]
```

Gets the flags used to construct the regular expression or in the last call to assign().

getloc()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex< _Ch_type, _Rx_traits >::getloc () const  [inline], [noexcept]
```

Gets the locale currently imbued in the regular expression object.

imbue()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex< _Ch_type, _Rx_traits >::imbue (
            locale_type __loc)  [inline]
```

Imbues the regular expression object with the given locale.

Parameters

__loc	A locale.

mark_count()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
unsigned int std::basic_regex< _Ch_type, _Rx_traits >::mark_count () const  [inline], [noexcept]
```

Gets the number of marked subexpressions within the regular expression.

operator=() [1/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
            basic_regex< _Ch_type, _Rx_traits > && )  [default]
```

Move-assigns one regular expression to another.

operator=() [2/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
            const _Ch_type * __p)  [inline]
```

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

Parameters

_↩ _*p*	A pointer to the start of a null-terminated C-style string containing a regular expression.

operator=() [3/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
            const basic_regex< _Ch_type, _Rx_traits > & )  [default]
```

Assigns one regular expression to another.

operator=() [4/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits, typename _Alloc>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
            const basic_string< _Ch_type, _Ch_traits, _Alloc > & __s)  [inline]
```

Replaces a regular expression with a new one constructed from a string.

Parameters

_↩ _*s*	A pointer to a string containing a regular expression.

operator=() [5/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
            initializer_list< _Ch_type > __l)  [inline]
```

Replaces a regular expression with a new one constructed from an initializer list.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer list.

Exceptions

regex_error	if __l is not a valid regular expression.

swap()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
void std::basic_regex< _Ch_type, _Rx_traits >::swap (
            basic_regex< _Ch_type, _Rx_traits > & __rhs)  [inline], [noexcept]
```

Swaps the contents of two regular expression objects.

Parameters

__rhs	Another regular expression object.

6.247.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_streambuf< _CharT, _Traits >

The actual work of input and output (interface).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.
Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:

- The controlled input sequence can be not readable.
- The controlled output sequence can be not writable.
- The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
- The controlled sequences can support operations *directly* to or from associated sequences.
- The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.

2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:
   - the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
   - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
   - the *end pointer*, or first element address beyond the end of the array (called *xend* here).
3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:
   - If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
   - If *xnext* is not a null pointer and *xnext* $<$ *xend* for an output sequence, then a *write position* is available. In this case, $*$*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
   - If *xnext* is not a null pointer and *xbeg* $<$ *xnext* for an input sequence, then a *putback position* is available. In this case, *xnext*[-1] shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
   - If *xnext* is not a null pointer and *xnext*$<$ *xend* for an input sequence, then a *read position* is available. In this case, $*$*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

6.247.2 Member Typedef Documentation

__streambuf_type

```
template<typename _CharT, typename _Traits>
typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _CharT, _Traits >::__↩
streambuf_type
```

This is a non-standard type.

char_type

```
template<typename _CharT, typename _Traits>
typedef _CharT std::basic_streambuf< _CharT, _Traits >::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

int_type

```
template<typename _CharT, typename _Traits>
typedef traits_type::int_type std::basic_streambuf< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

off_type

```
template<typename _CharT, typename _Traits>
typedef traits_type::off_type std::basic_streambuf< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

pos_type

```
template<typename _CharT, typename _Traits>
typedef traits_type::pos_type std::basic_streambuf< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

traits_type

```
template<typename _CharT, typename _Traits>
typedef _Traits std::basic_streambuf< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

6.247.3 Constructor & Destructor Documentation

~basic_streambuf()

```
template<typename _CharT, typename _Traits>
virtual std::basic_streambuf< _CharT, _Traits >::~basic_streambuf ()  [inline], [virtual]
```

Destructor deallocates no buffer space.

basic_streambuf()

```
template<typename _CharT, typename _Traits>
std::basic_streambuf< _CharT, _Traits >::basic_streambuf ()  [inline], [protected]
```

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the basic_streambuf class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

6.247.4 Member Function Documentation

eback()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::eback () const  [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _Cha std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

egptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::egptr () const  [inline], [protected]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_stringbuf< char std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow(), std::basic_filebuf< _CharT, _Traits >::xsgetn(), and xsgetn().

epptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::epptr () const  [inline], [protected]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sputc(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and xsputn().

gbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::gbump (
            int __n)  [inline], [protected]
```

Moving the read position.

Parameters

_↩ _n	The delta by which to move.

This just advances the read position without returning any data.

Referenced by std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_streambuf< char_type, traits_type >::uflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

getloc()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::getloc () const  [inline]
```

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.
Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

gptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::gptr () const  [inline], [protected]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy
std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_stringbuf< _CharT,
std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< cha
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_streambuf< char_type, traits_type >::sgetc(),
std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_stringbuf< char >::showmanyc(), std::basic_streambuf< char_type, traits
std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_streambuf< char_type, traits_type >::uflow(),
std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(),
std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow(), std::basic_filebuf< _CharT, _Traits >::xsgetn(), and
xsgetn().

imbue()

```
template<typename _CharT, typename _Traits>
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
            const locale & __loc)  [inline], [protected], [virtual]
```

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, and std::basic_filebuf< wchar_t >.
Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

in_avail()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ()  [inline]
```

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

overflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::overflow (
            int_type __c = traits_type::eof())  [inline], [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

_↩ _c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __c, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __c is not `eof()`.
For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, std::basic_stringbuf< _CharT, _T std::basic_stringbuf< char >, std::basic_stringbuf< wchar_t >, and std::wbuffer_convert< _Codecvt, _Elem, _Tr >.
Referenced by std::basic_streambuf< char_type, traits_type >::sputc(), and xsputn().

pbackfail()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::pbackfail (
            int_type __c = traits_type::eof())  [inline], [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

_↩ _c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, std::basic_stringbuf< _CharT, _Tr std::basic_stringbuf< char >, and std::basic_stringbuf< wchar_t >.
Referenced by std::basic_streambuf< char_type, traits_type >::sputbackc(), and std::basic_streambuf< char_type, traits_type >::sunget

pbase()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pbase () const  [inline], [protected]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, std::basic_stringbuf< char >::str(), std::basic_filebuf< _CharT, _Traits >::sync(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

pbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::pbump (
            int __n)  [inline], [protected]
```

Moving the write position.

Parameters

_↩ _n	The delta by which to move.

This just advances the write position without returning any data.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), and std::basic_streambuf< char_type, traits_type >::sputc().

pptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pptr () const  [inline], [protected]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_streambuf< char_t std::basic_filebuf< _CharT, _Traits >::sync(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and xsputn().

pubimbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
            const locale & __loc)  [inline]
```

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

pubseekoff()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline]
```

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

pubseekpos()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
```

```
            pos_type __sp,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline]
```

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

pubsetbuf()

```
template<typename _CharT, typename _Traits>
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
            char_type * __s,
            streamsize __n)  [inline]
```

Entry points for derived buffer functions.
The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

pubsync()

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync ()  [inline]
```

Calls virtual sync function.
Referenced by std::basic_istream< _CharT, _Traits >::sync().

sbumpc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ()  [inline]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_streambuf< char_type, traits_type >::snextc().

seekoff()

```
template<typename _CharT, typename _Traits>
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (
            off_type ,
            ios_base::seekdir ,
            ios_base::openmode  = ios_base::in | ios_base::out)  [inline], [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, std::basic_stringbuf< _CharT, _Ti std::basic_stringbuf< char >, and std::basic_stringbuf< wchar_t >.
Referenced by std::basic_streambuf< char_type, traits_type >::pubseekoff().

seekpos()

```
template<typename _CharT, typename _Traits>
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (
            pos_type ,
            ios_base::openmode  = ios_base::in | ios_base::out)  [inline], [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, std::basic_stringbuf< _CharT, _Ti std::basic_stringbuf< char >, and std::basic_stringbuf< wchar_t >.
Referenced by std::basic_streambuf< char_type, traits_type >::pubseekpos().

setbuf()

```
template<typename _CharT, typename _Traits>
virtual basic_streambuf< char_type, _Traits > * std::basic_streambuf< _CharT, _Traits >::setbuf
(
            char_type * ,
            streamsize )  [inline], [protected], [virtual]
```

Manipulates the buffer.
Each derived class provides its own appropriate behavior. See the next-to-last paragraph of https://gcc.gnu.↩org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more on this function.

Note

Base class version does nothing, returns `this`.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, and std::basic_stringbuf< char >.
Referenced by std::basic_streambuf< char_type, traits_type >::pubsetbuf().

setg()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
            char_type * __gbeg,
            char_type * __gnext,
            char_type * __gend)  [inline], [protected]
```

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert(), std::basic_filebuf< char_type, traits_type >::_M_create
std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_filebuf< char_type, traits_type >::_M_set_buffer(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setp (
            char_type * __pbeg,
            char_type * __pend)  [inline], [protected]
```

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert(), and std::basic_filebuf< char_type, traits_type >::_M_s

sgetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ()  [inline]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ign
and std::basic_streambuf< char_type, traits_type >::snextc().

sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
```

```
        char_type * __s,
        streamsize __n)  [inline]
```

Entry point for xsgetn.

Parameters

_↩ _s	A buffer area.
_↩ _n	A count.

Returns xsgetn(__s,__n). The effect is to fill __s[0] through __s[__n-1] with characters from the input sequence, if possible.

showmanyc()

```
template<typename _CharT, typename _Traits>
virtual streamsize std::basic_streambuf< _CharT, _Traits >::showmanyc ()  [inline], [protected],
[virtual]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*

The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_stringbuf< char >, and std::basic_stringbuf< wchar_t >.
Referenced by std::basic_streambuf< char_type, traits_type >::in_avail().

snextc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc ()  [inline]
```

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, char_traits< _CharT > >::get(), and std::basic_istream< _CharT, char_traits< _CharT > >::readsome().

sputbackc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
            char_type __c)  [inline]
```

Pushing characters back into the input stream.

Parameters

_↩ _c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but __c is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be __c.
Referenced by std::basic_istream< _CharT, _Traits >::putback().

sputc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
            char_type __c)  [inline]
```

Entry point for all single-character output functions.

Parameters

_↩ _c	A character to output.

Returns

__c, if possible.

One of two public output functions.
If a write position is available for the output sequence (i.e., the buffer is not full), stores __c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↩ __c)`.
Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::overflow().

sputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
            const char_type * __s,
            streamsize __n)  [inline]
```

Entry point for all single-character output functions.

Parameters

_↩ _s	A buffer read area.
_↩ _n	A count.

One of two public output functions.
Returns xsputn(__s,__n). The effect is to write __*s*[0] through __*s*[__n-1] to the output sequence, if possible.

sungetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ()  [inline]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.
Referenced by std::basic_istream< _CharT, _Traits >::unget().

sync()

```
template<typename _CharT, typename _Traits>
virtual int std::basic_streambuf< _CharT, _Traits >::sync ()  [inline], [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, and std::wbuffer_convert< _Codecvt, _Elem, _Tr >.
Referenced by std::basic_streambuf< char_type, traits_type >::pubsync().

uflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ()  [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.
Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.
Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), and xsgetn().

underflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::underflow ()  [inline], [protected],
[virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.
For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.
A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_stringbuf< char >, std::basic_stringbuf< wcha and std::wbuffer_convert< _Codecvt, _Elem, _Tr >.
Referenced by std::basic_streambuf< char_type, traits_type >::sgetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

xsgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (
             char_type * __s,
             streamsize __n)  [protected], [virtual]
```

Multiple character extraction.

Parameters

_↩ _*s*	A buffer area.
_↩ _*n*	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __*s*[0] through __*s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __*n* characters have been copied, or when `traits::eof()` would be copied.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, and std::basic_filebuf< char_type, traits_type >.
References egptr(), gptr(), std::min(), and uflow().
Referenced by std::basic_streambuf< char_type, traits_type >::sgetn().

xsputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::xsputn (
            const char_type * __s,
            streamsize __n)  [protected], [virtual]
```

Multiple character insertion.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __s[0] through __s[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, and std::basic_filebuf< char_type, traits_type >.
References epptr(), std::min(), overflow(), and pptr().
Referenced by std::basic_streambuf< char_type, traits_type >::sputn().

6.248.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>
class __gnu_debug::basic_string< _CharT, _Traits, _Allocator >

Class std::basic_string with safety/checking/debug instrumentation.

6.248.2 Member Function Documentation

__resize_and_overwrite() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string< _CharT, _Traits, _Alloc >::__resize_and_overwrite (
            size_type __n,
            _Operation __op)  [constexpr], [inherited]
```

Non-standard version of resize_and_overwrite for C++11 and above.

__resize_and_overwrite() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string< _CharT, _Traits, _Alloc >::__resize_and_overwrite (
            size_type __n,
            _Operation __op)  [inherited]
```

Non-standard version of resize_and_overwrite for C++11 and above.

append() [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const _CharT * __s,
            size_type __n)  [inline], [constexpr], [inherited]
```

Append a C substring.

Parameters

_↩ _s	The C string to append.
_↩ _n	The number of characters to append.

Returns

Reference to this string.

append() [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr], [inherited]
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Referenced by std::basic_string< _CharT >::append(), std::basic_string< _CharT >::append(), std::basic_string< _CharT >::append(), std::basic_string< _CharT >::append(), std::__cxx11::collate< _CharT >::do_transform(), std::basic_string< _CharT >::operator+=(), std::basic_string< _CharT >::operator+=(), std::basic_string< _CharT >::operator+=(), std::operator>>(), std::basic_string< _CharT, st and resize().

append() [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos)  [inline], [constexpr], [inherited]
```

Append a substring.

Parameters

__str	The string to append.

__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.

append() [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            initializer_list< _CharT > __l)  [inline], [constexpr], [inherited]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to append.

Returns

Reference to this string.

append() [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            size_type __n,
            _CharT __c)  [inline], [constexpr], [inherited]
```

Append multiple characters.

Parameters

_↩ *_n*	The number of characters to append.
_↩ *_c*	The character to use.

Returns

Reference to this string.

Appends __n copies of __c to this string.

assign() [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            basic_string< _CharT, _Traits, _Alloc > && __str)  [inline], [constexpr], [noexcept],
[inherited]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.

assign() [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const _CharT * __s,
            size_type __n)  [inline], [constexpr], [inherited]
```

Set value to a C substring.

Parameters

_↩ _s	The C string to use.
_↩ _n	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first *__n* characters of *__s*. If *__n* is is larger than the number of available characters in *__s*, the remainder of *__s* is used.

assign() [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr], [inherited]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

Referenced by std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::operator=(), std::basic_string< _CharT >::operator=(), std::basic_string< _CharT >::operator=(), std::basic_string< _CharT >::operator=(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< char >::str() and std::basic_stringbuf< char >::str().

assign() [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos)  [inline], [constexpr], [inherited]
```

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.

assign() [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            size_type __n,
            _CharT __c)  [inline], [constexpr], [inherited]
```

Set value to multiple characters.

Parameters

_↩ _n	Length of the resulting string.
_↩ _c	The character to use.

Returns

Reference to this string.

This function sets the value of this string to __n copies of character __c.

at() [1/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Allocator >::at (
            size_type __n)  [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

at() [2/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Allocator >::at (
            size_type __n)  [inline]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.

at() [3/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Allocator >::at (
            size_type __n) const  [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

at() [4/6]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Allocator >::at (
            size_type __n) const  [inline]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

at() [5/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n)  [inline], [nodiscard], [constexpr], [inherited]
```

Provides access to the data contained in the string.

Parameters

_↩ _*n*	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

at() [6/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n) const  [inline], [nodiscard], [constexpr], [inherited]
```

Provides access to the data contained in the string.

Parameters

_↩ _*n*	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

back() [1/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Allocator >::back () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

back() [2/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Allocator >::back ()  [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write reference to the data at the last element of the string.

capacity()

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::capacity () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

compare() [1/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            const basic_string< _CharT, _Traits, _Allocator > & __str) const  [inline], [nodiscard],
[constexpr]
```

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [2/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Allocator > & __str) const  [inline], [nodiscard],
[constexpr]
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [3/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Allocator > & __str) const  [inline]
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [4/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s) const  [inline], [nodiscard], [constexpr]
```

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [5/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2) const  [inline], [nodiscard], [constexpr]
```

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer < 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or

$>$ 0 if this substring is ordered after the string from __s. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and __n2. The function then compares the two strings by calling traits::↩ compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
NB: s must have at least n2 characters, '\0' has no special meaning.

compare() [6/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2) const  [inline]
```

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer $<$ 0, 0, or $>$ 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer $<$ 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or $>$ 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits::↩ compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
NB: s must have at least n2 characters, '\0' has no special meaning.

compare() [7/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos2,
            size_type __n2 = npos) const  [inline], [nodiscard], [constexpr]
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.

__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [8/12]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos2,
            size_type __n2 = npos) const  [inline]
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [9/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
```

```
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str) const  [inline], [nodiscard],
[constexpr], [inherited]
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [10/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s) const  [inline], [nodiscard], [constexpr], [inherited]
```

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [11/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
```

```
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2) const  [inline], [nodiscard], [constexpr], [inherited]
```

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer < 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits::compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
NB: s must have at least n2 characters, '\0' has no special meaning.

compare() [12/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n2 = npos) const  [inline], [nodiscard], [constexpr], [inherited]
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*,

0 if their values are equivalent, or > 0 if this substring is ordered after the substring of __*str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

copy()

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::copy (
            _CharT * __s,
            size_type __n,
            size_type __pos = 0) const  [constexpr], [inherited]
```

Copy substring into C string.

Parameters

__*s*	C string to copy value into.
__*n*	Number of characters to copy.
__*pos*	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

std::out_of_range	If __pos > size().

Copies up to __*n* characters starting at __*pos* into the C string __*s*. If __*pos* is greater than size(), out_of_range is thrown.

data()

```
template<typename _CharT, typename _Traits, typename _Alloc>
_CharT * std::basic_string< _CharT, _Traits, _Alloc >::data ()  [inline], [nodiscard], [constexpr],
[noexcept], [inherited]
```

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

empty()

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
bool std::basic_string< _CharT, _Traits, _Allocator >::empty () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

erase() [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            __const_iterator __first,
            __const_iterator __last)  [inline], [constexpr], [inherited]
```

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

erase() [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            __const_iterator __position)  [inline], [constexpr], [inherited]
```

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.

erase() [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc
>::erase (
            iterator __first,
            iterator __last)  [inherited]
```

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

erase() [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            iterator __position)  [inline], [inherited]
```

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.

erase() [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::erase (
            size_type __pos = 0,
            size_type __n = npos)  [inline], [constexpr], [inherited]
```

Remove characters.

Parameters

__pos	Index of first character to remove (default 0).
__n	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are < *__n* characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Referenced by std::getline(), std::operator>>(), std::basic_string< _CharT >::pop_back(), and resize().

find() [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
            _CharT __c,
            size_type __pos = 0) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find() [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
            _CharT __c,
            size_type __pos = 0) const  [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find() [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
            _CharT __c,
            size_type __pos = 0) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find() [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
References std::data(), npos, and std::size().
Referenced by std::basic_string< _CharT >::find(), std::basic_string< _CharT >::find(), std::basic_string< _CharT >::find(), and std::basic_string< _CharT >::find_first_of().

find() [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
```

```
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

find_first_not_of() [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
            _CharT __c,
            size_type __pos = 0) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
            _CharT __c,
            size_type __pos = 0) const  [noexcept]
```

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from.
__n	Number of characters from __s to consider.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from.
__n	Number of characters from __s to consider.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
```

```
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
            _CharT __c,
            size_type __pos = 0) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from __*pos*, searches forward for a character other than __*c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_first_not_of() [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character not in C substring.

Parameters

__*s*	C string containing characters to avoid.
__*pos*	Index of character to search from.
__*n*	Number of characters from __s to consider.

Returns

Index of first occurrence.

Starting from __*pos*, searches forward for a character not contained in the first __*n* characters of __*s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_first_not_of() [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character not in C string.

Parameters

__*s*	C string containing characters to avoid.
__*pos*	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from __*pos*, searches forward for a character not contained in __*s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_first_not_of(), std::basic_string< _CharT >::find_first_not_of(), and std::basic_string< _CharT >::find_first_not_of().

find_first_of() [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
            _CharT __c,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for the character *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to find(__c, __pos).

find_first_of() [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
            _CharT __c,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for the character *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to find(__c, __pos).

find_first_of() [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C substring.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from.
__n	Number of characters from s to search for.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find position of a character of C substring.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from.
__n	Number of characters from s to search for.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C string.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            _CharT __c,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for the character *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to find(__c, __pos).

find_first_of() [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
```

```
>::find_first_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character of C substring.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from.
__n	Number of characters from s to search for.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_first_of() [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character of C string.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_first_of(), and std::basic_string< _CharT >::find_first_of().

find_last_not_of() [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
            _CharT __c,
            size_type __pos = npos) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
            _CharT __c,
            size_type __pos = npos) const  [noexcept]
```

Find last position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from.
__n	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find last position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from.
__n	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
            _CharT __c,
            size_type __pos = npos) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_last_not_of() [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from.
__n	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_last_not_of() [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from __*pos*, searches backward for a character not contained in __*str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_last_not_of(), std::basic_string< _CharT >::find_last_not_of(), and std::basic_string< _CharT >::find_last_not_of().

find_last_of() [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
            _CharT __c,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

Parameters

__*c*	Character to locate.
__*pos*	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from __*pos*, searches backward for __*c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to rfind(__c, __pos).

find_last_of() [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
            _CharT __c,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character.

Parameters

__*c*	Character to locate.
__*pos*	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from __*pos*, searches backward for __*c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to rfind(__c, __pos).

find_last_of() [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C substring.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find last position of a character of C substring.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C string.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            _CharT __c,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to rfind(__c, __pos).

find_last_of() [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character of C substring.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_last_of() [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character of C string.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_last_of(), and std::basic_string< _CharT >::find_last_of().

front() [1/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Allocator >::front () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

front() [2/2]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
reference std::basic_string< _CharT, _Traits, _Allocator >::front ()  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read/write reference to the data at the first element of the string.

get_allocator()

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
allocator_type std::basic_string< _CharT, _Traits, _Allocator >::get_allocator () const  [inline],
[nodiscard], [constexpr], [noexcept]
```

Return copy of allocator used to construct this string.

insert() [1/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            __const_iterator __p,
            _CharT __c)  [inline], [constexpr], [inherited]
```

Insert one character.

Parameters

_↩ _p	Iterator referencing position in string to insert at.
_↩ _c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [2/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            const_iterator __p,
            _InputIterator __beg,
            _InputIterator __end)  [inline], [constexpr], [inherited]
```

Insert a range of characters.

Parameters

__p	Const_iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Returns

Iterator referencing the first inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [beg,end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [3/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            const_iterator __p,
            initializer_list< _CharT > __l)  [inline], [constexpr], [inherited]
```

Insert an initializer_list of characters.

Parameters

_↩ _p	Iterator referencing location in string to insert at.
_↩ _l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

insert() [4/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            const_iterator __p,
            size_type __n,
            _CharT __c)  [inline], [constexpr], [inherited]
```

Insert multiple characters.

Parameters

_↩ _p	Const_iterator referencing location in string to insert at.
_↩ _n	Number of characters to insert
_↩ _c	The character to insert.

Returns

Iterator referencing the first inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts __n copies of character __c starting at the position referenced by iterator __p. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Referenced by std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), and std::basic_string< _CharT >::insert().

insert() [5/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            _CharT __c)  [inline], [inherited]
```

Insert one character.

Parameters

_↩ _p	Iterator referencing position in string to insert at.
_↩ _c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character __c at position referenced by __p. If adding character causes the length to exceed max_size(), length_error is thrown. If __p is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [6/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
             iterator __p,
             _InputIterator __beg,
             _InputIterator __end)  [inline], [inherited]
```

Insert a range of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [__beg,__end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [7/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
             iterator __p,
             initializer_list< _CharT > __l)  [inline], [inherited]
```

Insert an initializer_list of characters.

Parameters

_↩ _p	Iterator referencing location in string to insert at.
_↩ _l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

insert() [8/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
```

```
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            size_type __n,
            _CharT __c)  [inline], [inherited]
```

Insert multiple characters.

Parameters

_↩ _p	Iterator referencing location in string to insert at.
_↩ _n	Number of characters to insert
_↩ _c	The character to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts *__n* copies of character *__c* starting at the position referenced by iterator *__p*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [9/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s)  [inline], [constexpr], [inherited]
```

Insert a C string.

Parameters

__pos	Position in string to insert at.
__s	The C string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos* is beyond the end of this string.

Inserts the first *n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [10/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s,
            size_type __n)  [inline], [constexpr], [inherited]
```

Insert a C substring.

Parameters

__pos	Position in string to insert at.
__s	The C string to insert.
__n	The number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [11/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            size_type __n,
            _CharT __c)  [inline], [constexpr], [inherited]
```

Insert multiple characters.

Parameters

__pos	Index in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts *__n* copies of character *__c* starting at index *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* > length(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [12/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr], [inherited]
```

Insert value of a string.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [13/13]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n = npos)  [inline], [constexpr], [inherited]
```

Insert a substring.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.

__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos1* > size() or *__pos2* > *str.size()*.

Starting at *pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

length()

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::length () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

max_size()

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::max_size () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the size() of the largest possible string.

operator+=()

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr], [inherited]
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

operator[]() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos)  [inline], [nodiscard], [constexpr], [inherited]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

operator[]() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)
Referenced by std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::front(), std::basic_string< _CharT >::front(), and std::basic_string< _CharT >::front().

replace() [1/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            __const_iterator __i1,
            __const_iterator __i2,
            const _CharT * __s)  [inline], [constexpr], [inherited]
```

Replace range of characters with C string.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.

_↩ _s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [2/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            __const_iterator __i1,
            __const_iterator __i2,
            const _CharT * __s,
            size_type __n)  [inline], [constexpr], [inherited]
```

Replace range of characters with C substring.

Parameters

_↩ _*i1*	Iterator referencing start of range to replace.
_↩ _*i2*	Iterator referencing end of range to replace.
_↩ _*s*	C string value to insert.
_↩ _*n*	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first __*n* characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [3/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
```

```
__const_iterator __i1,
__const_iterator __i2,
const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr], [inherited]
```

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [4/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
             __const_iterator __i1,
             __const_iterator __i2,
             size_type __n,
             _CharT __c)  [inline], [constexpr], [inherited]
```

Replace range of characters with multiple characters.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _n	Number of characters to insert.
_↩ _c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, __*n* copies of __*c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [5/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
             const_iterator __i1,
             const_iterator __i2,
             _InputIterator __k1,
             _InputIterator __k2)  [inline], [constexpr], [inherited]
```

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [6/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
             const_iterator __i1,
             const_iterator __i2,
             initializer_list< _CharT > __l)  [inline], [constexpr], [inherited]
```

Replace range of characters with initializer_list.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [7/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
             iterator __i1,
             iterator __i2,
             _InputIterator __k1,
             _InputIterator __k2)  [inline], [inherited]
```

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [8/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s)  [inline], [inherited]
```

Replace range of characters with C string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [9/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s,
            size_type __n)  [inline], [inherited]
```

Replace range of characters with C substring.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _s	C string value to insert.
_↩ _n	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first *__n* characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [10/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [inherited]
```

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [11/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            initializer_list< _CharT > __l)  [inline], [inherited]
```

Replace range of characters with initializer_list.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [12/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            size_type __n,
            _CharT __c)  [inline], [inherited]
```

Replace range of characters with multiple characters.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _n	Number of characters to insert.

_↩ _c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, __*n* copies of __*c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [13/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr], [inherited]
```

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos+__n) from this string. In place, the value of __*str* is inserted. If __*pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Referenced by std::basic_string< _CharT >::append(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), and std::basic_string< _CharT >::replace().

replace() [14/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            const _CharT * __s)  [inline], [constexpr], [inherited]
```

Replace characters with value of a C string.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the characters of *__s* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [15/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::replace
(
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2)  [inline], [constexpr], [inherited]
```

Replace characters with value of a C substring.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.
__n2	Number of characters from *s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos1* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the first *__n2* characters of *__s* are inserted, or all of *__s* if *__n2* is too large. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [16/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            size_type __n2,
            _CharT __c)  [inline], [constexpr], [inherited]
```

Replace characters with multiple characters.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__n2	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, *__n2* copies of *__c* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [17/17]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos1,
            size_type __n1,
```

```
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n2 = npos)  [inline], [constexpr], [inherited]
```

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > __str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos1,__pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

reserve() [1/4]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
void std::basic_string< _CharT, _Traits, _Allocator >::reserve ()  [constexpr]
```

Equivalent to shrink_to_fit().

reserve() [2/4]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
void std::basic_string< _CharT, _Traits, _Allocator >::reserve (
            size_type __res_arg)  [constexpr]
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

reserve() [3/4]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
void std::basic_string< _CharT, _Traits, _Allocator >::reserve (
            size_type __res_arg)
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

reserve() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
            size_type __res_arg)  [constexpr], [inherited]
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.
References capacity(), get_allocator(), and std::size().
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:

std::tr2::operator>>(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow().

resize() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n)  [inline], [constexpr], [inherited]
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

resize() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n,
            _CharT __c)  [constexpr], [inherited]
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.
_↩ _c	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to __c.
References append(), erase(), and size().
Referenced by std::basic_string< _CharT >::resize().

rfind() [1/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::rfind (
            _CharT __c,
            size_type __pos = npos) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

rfind() [2/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::rfind (
            _CharT __c,
            size_type __pos = npos) const  [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

rfind() [3/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

rfind() [4/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

rfind() [5/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::rfind (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr]
```

Find last position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

rfind() [6/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::rfind (
```

```
            const basic_string< _CharT, _Traits, _Allocator > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

rfind() [7/11]

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =

>::rfind (
            _CharT __c,
            size_type __pos = npos) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from __pos, searches backward for __c within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

rfind() [9/11]

>::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from __pos, searches backward for the first __n characters in __s within this string. If found, returns the index where it begins. If not found, returns npos.
References std::min(), npos, and std::size().

rfind() [10/11]

            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept], [inherited]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_last_of(), std::basic_string< _CharT >::rfind(), std::basic_string< _CharT >::rfind(), std::basic_string< _CharT >::rfind(), and std::basic_string< _CharT >::rfind().

size()

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Allocator >::size () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

substr()

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr (
            size_type __pos = 0,
            size_type __n = npos) const  [inline], [nodiscard], [constexpr], [inherited]
```

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a new string using the __*n* characters starting at __*pos*. If the string is too short, use the remainder of the characters. If __*pos* is beyond the end of the string, out_of_range is thrown.

subview() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string_view< _CharT, _Traits > std::basic_string< _CharT, _Traits, _Alloc >::subview (
            size_type __pos = 0,
            size_type __n = npos) const  [inline], [nodiscard], [constexpr], [inherited]
```

Get a subview.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in subview (default remainder).

Returns

The subview.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a subview using the __n characters starting at __pos. If the string is too short, use the remainder of the characters. If __pos is beyond the end of the string, out_of_range is thrown.

subview() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string_view< _CharT, _Traits > std::basic_string< _CharT, _Traits, _Alloc >::subview (
            size_type __pos = 0,
            size_type __n = npos) const  [inline], [nodiscard], [constexpr], [inherited]
```

Get a subview.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in subview (default remainder).

Returns

The subview.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a subview using the __n characters starting at __pos. If the string is too short, use the remainder of the characters. If __pos is beyond the end of the string, out_of_range is thrown.

swap()

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::swap (
            basic_string< _CharT, _Traits, _Alloc > & __s)  [constexpr], [noexcept], [inherited]
```

Swap contents with another string.

Parameters

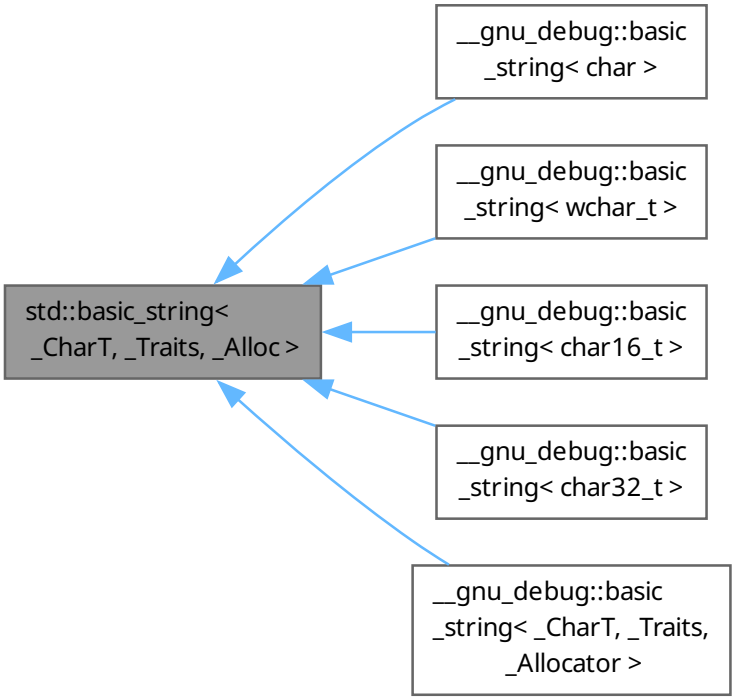
_↩ _s	String to swap with.

Exchanges the contents of this string with that of __*s* in constant time.
References basic_string(), and get_allocator().
Referenced by std::basic_string< _CharT >::assign(), and std::basic_string< _CharT >::operator=().

6.248.3 Member Data Documentation

npos

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const size_type std::basic_string< _CharT, _Traits, _Allocator >::npos  [static]
```



Value returned by various member functions when they fail.
The documentation for this class was generated from the following file:

- debug/string

6.249 std::basic_string< _CharT, _Traits, _Alloc > Class Template Reference

6.249.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_string< _CharT, _Traits, _Alloc >

Managing sequences of characters and character-like objects.

Since

C++98

Template Parameters

_CharT	Type of character
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

Meets the requirements of a container, a reversible container, and a sequence. Of the optional sequence requirements, only push_back, at, and array access are supported.

Since

C++98

Template Parameters

_CharT	Type of character
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

Meets the requirements of a container, a reversible container, and a sequence. Of the optional sequence requirements, only push_back, at, and array access are supported.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Documentation? What's that? Nathan Myers ncm@cantrip.org.
A string looks like this:

```
                                        [_Rep]
                                        _M_length
[basic_string<char_type>]               _M_capacity
_M_dataplus                             _M_refcount
_M_p ---------------->                  unnamed array of char_type
```

Where the _M_p points to the first character in the string, and you cast it to a pointer-to-_Rep and subtract 1 to get a pointer to the header.
This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: _Rep::_M_data(), and string::_M_rep(); and the allocation function which gets a block of raw bytes and with room enough and constructs a _Rep object at the front.
The reason you want _M_data pointing to the character array and not the _Rep is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the _Rep for the debugger to use, so users can check the actual string length.)
Note that the _Rep object is a POD so that you can have a static *empty string* _Rep object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string _Rep object.
All but the last paragraph is considered pretty conventional for a Copy-On-Write C++ string implementation.

6.249.2 Constructor & Destructor Documentation

basic_string() [1/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string ()  [inline], [constexpr], [noexcept]
```

Default constructor creates an empty string.

Referenced by std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::substr(), swap(), and std::basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >::swap().

basic_string() [2/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _Alloc & __a)  [inline], [explicit], [constexpr], [noexcept]
```

Construct an empty string using allocator *a*.

basic_string() [3/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Construct string with copy of value of *__str*.

Parameters

__str	Source string.

basic_string() [4/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            const _Alloc & __a = _Alloc())  [inline], [constexpr]
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__a	Allocator to use.

basic_string() [5/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n)  [inline], [constexpr]
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.

basic_string() [6/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n,
            const _Alloc & __a)  [inline], [constexpr]
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.
__a	Allocator to use.

basic_string() [7/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _CharT * __s,
            size_type __n,
            const _Alloc & __a = _Alloc())  [inline], [constexpr]
```

Construct string initialized by a character array.

Parameters

_↩ _s	Source character array.
_↩ _n	Number of characters to copy.
_↩ _a	Allocator to use (default is default allocator).

NB: *__s* must have at least *__n* characters, '\0' has no special meaning.

basic_string() [8/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
```

```
template<typename = _RequireAllocator<_Alloc>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _CharT * __s,
            const _Alloc & __a = _Alloc())  [inline], [constexpr]
```

Construct string as copy of a C string.

Parameters

_↩ _s	Source C string.
_↩ _a	Allocator to use (default is default allocator).

basic_string() [9/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename = _RequireAllocator<_Alloc>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            size_type __n,
            _CharT __c,
            const _Alloc & __a = _Alloc())  [inline], [constexpr]
```

Construct string as multiple characters.

Parameters

_↩ _n	Number of characters.
_↩ _c	Character to use.
_↩ _a	Allocator to use (default is default allocator).

basic_string() [10/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            basic_string< _CharT, _Traits, _Alloc > && __str)  [inline], [constexpr], [noexcept]
```

Move construct string.

Parameters

__str	Source string.

The newly-created string contains the exact contents of __str. __str is a valid, but unspecified string.

basic_string() [11/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
```

```
            initializer_list< _CharT > __l,
            const _Alloc & __a = _Alloc())  [inline], [constexpr]
```

Construct string from an initializer list.

Parameters

_↩ _l	std::initializer_list of characters.
_↩ _a	Allocator to use (default is default allocator).

basic_string() [12/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            _InputIterator __beg,
            _InputIterator __end,
            const _Alloc & __a = _Alloc())  [inline], [constexpr]
```

Construct string as copy of a range.

Parameters

__beg	Start of range.
__end	End of range.
__a	Allocator to use (default is default allocator).

~basic_string() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::~basic_string ()  [inline], [constexpr]
```

Destroy the string instance.

basic_string() [13/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string ()  [inline], [noexcept]
```

Default constructor creates an empty string.

basic_string() [14/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _Alloc & __a)  [inline], [explicit]
```

Construct an empty string using allocator *a*.

basic_string() [15/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline]
```

Construct string with copy of value of *str*.

Parameters

__str	Source string.

basic_string() [16/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            const _Alloc & __a = _Alloc())
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__a	Allocator to use.

basic_string() [17/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n)
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.

basic_string() [18/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
```

```
            size_type __n,
            const _Alloc & __a)
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.
__a	Allocator to use.

basic_string() [19/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _CharT * __s,
            size_type __n,
            const _Alloc & __a = _Alloc())  [inline]
```

Construct string initialized by a character array.

Parameters

_↩ _s	Source character array.
_↩ _n	Number of characters to copy.
_↩ _a	Allocator to use (default is default allocator).

NB: *__s* must have at least *__n* characters, '\0' has no special meaning.

basic_string() [20/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename = _RequireAllocator<_Alloc>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _CharT * __s,
            const _Alloc & __a = _Alloc())  [inline]
```

Construct string as copy of a C string.

Parameters

_↩ _s	Source C string.
_↩ _a	Allocator to use (default is default allocator).

basic_string() [21/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            size_type __n,
            _CharT __c,
            const _Alloc & __a = _Alloc())  [inline]
```

Construct string as multiple characters.

Parameters

_↩ _n	Number of characters.
_↩ _c	Character to use.
_↩ _a	Allocator to use (default is default allocator).

basic_string() [22/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            basic_string< _CharT, _Traits, _Alloc > && __str)  [inline], [noexcept]
```

Move construct string.

Parameters

__str	Source string.

The newly-created string contains the exact contents of __str. __str is a valid, but unspecified string.

basic_string() [23/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            initializer_list< _CharT > __l,
            const _Alloc & __a = _Alloc())  [inline]
```

Construct string from an initializer list.

Parameters

_↩ _l	std::initializer_list of characters.
_↩ _a	Allocator to use (default is default allocator).

basic_string() [24/24]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            _InputIterator __beg,
            _InputIterator __end,
            const _Alloc & __a = _Alloc())  [inline]
```

Construct string as copy of a range.

Parameters

__beg	Start of range.
__end	End of range.
__a	Allocator to use (default is default allocator).

~basic_string() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::~basic_string ()  [inline], [noexcept]
```

Destroy the string instance.

6.249.3 Member Function Documentation

__resize_and_overwrite() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string< _CharT, _Traits, _Alloc >::__resize_and_overwrite (
            size_type __n,
            _Operation __op)  [constexpr]
```

Non-standard version of resize_and_overwrite for C++11 and above.

__resize_and_overwrite() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Operation>
void std::basic_string< _CharT, _Traits, _Alloc >::__resize_and_overwrite (
            size_type __n,
            _Operation __op)
```

Non-standard version of resize_and_overwrite for C++11 and above.

append() [1/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            _InputIterator __first,
            _InputIterator __last)  [inline], [constexpr]
```

Append a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [__first,__last) to this string.

append() [2/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            _InputIterator __first,
            _InputIterator __last)  [inline]
```

Append a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [__first,__last) to this string.

append() [3/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const _CharT * __s)  [inline], [constexpr]
```

Append a C string.

Parameters

_↩ _s	The C string to append.

Returns

Reference to this string.

append() [4/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const _CharT * __s)  [inline]
```

Append a C string.

Parameters

_↩ _s	The C string to append.

Returns

Reference to this string.

append() [5/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const _CharT * __s,
            size_type __n)  [inline], [constexpr]
```

Append a C substring.

Parameters

_↩ _s	The C string to append.
_↩ _n	The number of characters to append.

Returns

Reference to this string.

append() [6/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const _CharT * __s,
            size_type __n)
```

Append a C substring.

Parameters

_↩ _s	The C string to append.
_↩ _n	The number of characters to append.

Returns

Reference to this string.

append() [7/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Referenced by std::basic_string< _CharT >::append(), std::basic_string< _CharT >::append(), std::basic_string< _CharT >::append(), std::basic_string< _CharT >::append(), std::__cxx11::collate< _CharT >::do_transform(), std::basic_string< _CharT >::operator+=(), std::basic_string< _CharT >::operator+=(), std::basic_string< _CharT >::operator+=(), std::operator>>(), std::basic_string< _CharT, st and resize().

append() [8/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str)
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

append() [9/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos)  [inline], [constexpr]
```

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.

append() [10/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos)
```

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.

append() [11/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            initializer_list< _CharT > __l)  [inline], [constexpr]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to append.

Returns

Reference to this string.

append() [12/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            initializer_list< _CharT > __l)  [inline]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to append.

Returns

Reference to this string.

append() [13/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            size_type __n,
            _CharT __c)  [inline], [constexpr]
```

Append multiple characters.

Parameters

_↩ *_n*	The number of characters to append.
_↩ *_c*	The character to use.

Returns

Reference to this string.

Appends __n copies of __c to this string.

append() [14/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
            size_type __n,
            _CharT __c)
```

Append multiple characters.

Parameters

_↩ _n	The number of characters to append.
_↩ _c	The character to use.

Returns

Reference to this string.

Appends __n copies of __c to this string.

assign() [1/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            _InputIterator __first,
            _InputIterator __last)  [inline], [constexpr]
```

Set value to a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [__first,__last).

assign() [2/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            _InputIterator __first,
            _InputIterator __last)  [inline]
```

Set value to a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [__first,__last).

assign() [3/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            basic_string< _CharT, _Traits, _Alloc > && __str)  [inline], [constexpr], [noexcept]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.

assign() [4/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            basic_string< _CharT, _Traits, _Alloc > && __str)  [inline], [noexcept]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.

assign() [5/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const _CharT * __s)  [inline], [constexpr]
```

Set value to contents of a C string.

Parameters

_↩ _s	The C string to use.

Returns

Reference to this string.

This function sets the value of this string to the value of __s. The data is copied, so there is no dependence on __s once the function returns.

assign() [6/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const _CharT * __s)  [inline]
```

Set value to contents of a C string.

Parameters

_↩ _s	The C string to use.

Returns

Reference to this string.

This function sets the value of this string to the value of __s. The data is copied, so there is no dependence on __s once the function returns.

assign() [7/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const _CharT * __s,
            size_type __n)  [inline], [constexpr]
```

Set value to a C substring.

Parameters

_↩ _s	The C string to use.
_↩ _n	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first __n characters of __s. If __n is is larger than the number of available characters in __s, the remainder of __s is used.

assign() [8/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const _CharT * __s,
            size_type __n)
```

Set value to a C substring.

Parameters

_↩ _s	The C string to use.
_↩ _n	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first __n characters of __s. If __n is is larger than the number of available characters in __s, the remainder of __s is used.

assign() [9/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

Referenced by std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::operator=(), std::basic_string< _CharT >::operator=(), std::basic_string< _CharT >::operator=(), std::basic_string< _CharT >::operator=(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< char >::str() and std::basic_stringbuf< char >::str().

assign() [10/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str)
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

assign() [11/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos)  [inline], [constexpr]
```

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.

assign() [12/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos)  [inline]
```

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.

assign() [13/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            initializer_list< _CharT > __l)  [inline], [constexpr]
```

Set value to an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to assign.

Returns

Reference to this string.

assign() [14/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            initializer_list< _CharT > __l)  [inline]
```

Set value to an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to assign.

Returns

Reference to this string.

assign() [15/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
```

```
            size_type __n,
            _CharT __c)  [inline], [constexpr]
```

Set value to multiple characters.

Parameters

_↩ _n	Length of the resulting string.
_↩ _c	The character to use.

Returns

Reference to this string.

This function sets the value of this string to __n copies of character __c.

assign() [16/16]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            size_type __n,
            _CharT __c)  [inline]
```

Set value to multiple characters.

Parameters

_↩ _n	Length of the resulting string.
_↩ _c	The character to use.

Returns

Reference to this string.

This function sets the value of this string to __n copies of character __c.

at() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n)  [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

at() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n)  [inline]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.

at() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n) const  [inline], [nodiscard], [constexpr]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

at() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n) const  [inline]
```

Provides access to the data contained in the string.

Parameters

_↩ _*n*	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

back() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::back ()  [inline]
```

Returns a read/write reference to the data at the last element of the string.

back() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

back() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back () const  [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

back() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::back () [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write reference to the data at the last element of the string.

begin() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () [inline]
```

Returns a read/write iterator that points to the first character in the string. Unshares the string.

begin() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

begin() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

begin() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write iterator that points to the first character in the string.
Referenced by std::basic_string< _CharT >::crend(), std::basic_string< _CharT >::erase(), std::basic_string< _CharT >::erase(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::regex_match(), std::regex_match(), std::regex_replace(), std::regex_replace(), std::regex_search(), std::basic_string< _CharT >::ren std::basic_string< _CharT >::rend(), std::basic_string< _CharT >::rend(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), and std::basic_string< _CharT >::replace().

c_str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic_string< _CharT, _Traits, _Alloc >::c_str () const [inline], [nodiscard],
[constexpr], [noexcept]
```

Return const pointer to null-terminated contents.
This is a handle to internal data. Do not modify or dire things may happen.
Referenced by std::__cxx11::collate< _CharT >::do_compare(), std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::__cxx11::collate< _CharT >::do_transform(), std::basic_filebuf< char_type, traits_type >::open(), std::operator+(), std::operator+(), std::operator+(), std::operator+(), std::operator+(), std::regex_replace(), and std::regex_traits< _CharT >::transform_prim

c_str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic_string< _CharT, _Traits, _Alloc >::c_str () const [inline], [noexcept]
```

Return const pointer to null-terminated contents.
This is a handle to internal data. Do not modify or dire things may happen.

capacity() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::capacity () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.
Referenced by std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::push_back(), reserve(), and reserve().

capacity() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::capacity () const  [inline], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

cbegin() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cbegin () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

cbegin() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cbegin () const  [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

cend() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cend () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

cend() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cend () const  [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

clear() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::clear ()  [inline], [constexpr], [noexcept]
```

Erases the string, making it empty.
Referenced by std::__cxx11::collate< _CharT >::do_transform(), and std::basic_string< _CharT >::operator=().

clear() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::clear ()  [inline], [noexcept]
```

Erases the string, making it empty.

compare() [1/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            const _CharT * __s) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Compare to a C string.

Parameters

_↩ _s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before __s, 0 if their values are equivalent, or > 0 if this string is ordered after __s. Determines the effective length rlen of the strings to compare as the smallest of size() and the length of a string constructed from __s. The function then compares the two strings by calling traits::compare(data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [2/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            const _CharT * __s) const  [inline], [noexcept]
```

Compare to a C string.

Parameters

_↩ _s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before __s, 0 if their values are equivalent, or > 0 if this string is ordered after __s. Determines the effective length rlen of the strings to compare as the smallest of size() and the length of a string constructed from __s. The function then compares the two strings by calling traits::compare(data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [3/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            const basic_string< _CharT, _Traits, _Alloc > & __str) const  [inline], [nodiscard],
[constexpr]
```

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [4/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            const basic_string< _CharT, _Traits, _Alloc > & __str) const  [inline]
```

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [5/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str) const  [inline], [nodiscard],
[constexpr]
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [6/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str) const  [inline]
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [7/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s) const  [inline], [nodiscard], [constexpr]
```

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [8/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s) const  [inline]
```

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer $<$ 0, 0, or $>$ 0.

Form the substring of this string from the *__n1* characters starting at *pos*. Returns an integer $<$ 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or $>$ 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [9/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2) const  [inline], [nodiscard], [constexpr]
```

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer $<$ 0, 0, or $>$ 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer $<$ 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or $>$ 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare

as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits::↩ compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
NB: s must have at least n2 characters, '\0' has no special meaning.

compare() [10/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2) const  [inline]
```

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer < 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits::↩ compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
NB: s must have at least n2 characters, '\0' has no special meaning.

compare() [11/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n2 = npos) const  [inline], [nodiscard], [constexpr]
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.

__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

compare() [12/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n2 = npos) const  [inline]
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

copy() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::copy (
            _CharT * __s,
            size_type __n,
            size_type __pos = 0) const  [constexpr]
```

Copy substring into C string.

Parameters

__s	C string to copy value into.
__n	Number of characters to copy.
__pos	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

std::out_of_range	If __pos > size().

Copies up to *__n* characters starting at *__pos* into the C string *__s*. If *__pos* is greater than size(), out_of_range is thrown.

copy() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::copy (
            _CharT * __s,
            size_type __n,
            size_type __pos = 0) const
```

Copy substring into C string.

Parameters

__s	C string to copy value into.
__n	Number of characters to copy.
__pos	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

std::out_of_range	If __pos > size().

Copies up to *__n* characters starting at *__pos* into the C string *__s*. If *__pos* is greater than size(), out_of_range is thrown.

crbegin() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crbegin () const  [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

crbegin() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crbegin () const  [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

crend() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crend () const  [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

crend() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crend () const  [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

data() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic_string< _CharT, _Traits, _Alloc >::data () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Return const pointer to contents.

This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).

Referenced by std::basic_regex< char >::assign(), std::basic_string< _CharT >::compare(), std::basic_string< _CharT >::compare(), std::basic_string< _CharT >::compare(), std::__cxx11::collate< _CharT >::do_compare(), std::__cxx11::collate< _CharT >::do_transfo std::basic_string< _CharT >::find(), std::basic_string< _CharT >::find_first_not_of(), std::basic_string< _CharT >::find_first_of(), std::basic_string< _CharT >::find_last_of(), std::match_results< _BidirectionalIterator, polymorphic_allocator< sub↩ _match< _BidirectionalIterator > > >< const char * >::format(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::fr std::operator==(), std::basic_stringbuf< char >::str(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes(), and std::regex_traits< _CharT >::transform().

data() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic_string< _CharT, _Traits, _Alloc >::data () const  [inline], [noexcept]
```

Return const pointer to contents.

This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).

data() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
_CharT * std::basic_string< _CharT, _Traits, _Alloc >::data ()  [inline], [nodiscard], [constexpr],
[noexcept]
```

Return non-const pointer to contents.
This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

data() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
_CharT * std::basic_string< _CharT, _Traits, _Alloc >::data ()  [inline]
```

Return non-const pointer to contents.
This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.
The standard requires this function to be `noexcept` but for the Copy-On-Write string implementation it can throw. This function allows modifying the string contents directly, which means we must copy-on-write to unshare it, which requires allocating memory.

empty() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
bool std::basic_string< _CharT, _Traits, _Alloc >::empty () const  [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.
Referenced by std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::front(), std::basic_string< _CharT >::front(), std::basic_string< _CharT >::front(), std::regex_traits< _Ch_type >::lookup_collatename(), std::tr2::operator>>(), std::basic_string< _CharT >::pop_back(), and std::basic_string< _CharT >::pop_back().

empty() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
bool std::basic_string< _CharT, _Traits, _Alloc >::empty () const  [inline], [nodiscard], [noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

end() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::end ()  [inline]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

end() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

end() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end () const  [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

end() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::end ()  [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write iterator that points one past the last character in the string.

Referenced by std::basic_string< _CharT >::append(), std::basic_string< _CharT >::crbegin(), std::basic_string< _CharT >::erase(), std::basic_string< _CharT >::erase(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::rbegin(), std::basic_string< _CharT >::rbegin(), std::basic_string< _CharT >::rbegin(), std::regex_match(), std::regex_match(), std::regex_replace(), std::regex_replace(), std::regex_search(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), and std::basic_string< _CharT >::r

erase() [1/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            __const_iterator __first,
            __const_iterator __last)  [inline], [constexpr]
```

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

erase() [2/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            __const_iterator __position)  [inline], [constexpr]
```

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.

erase() [3/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc
>::erase (
```

```
            iterator __first,
            iterator __last)
```

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

erase() [4/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            iterator __position)  [inline]
```

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.

erase() [5/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::erase (
            size_type __pos = 0,
            size_type __n = npos)  [inline], [constexpr]
```

Remove characters.

Parameters

__pos	Index of first character to remove (default 0).
__n	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are < *__n* characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Referenced by std::getline(), std::operator>>(), std::basic_string< _CharT >::pop_back(), and resize().

erase() [6/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::erase (
            size_type __pos = 0,
            size_type __n = npos)  [inline]
```

Remove characters.

Parameters

__pos	Index of first character to remove (default 0).
__n	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are < *__n* characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

find() [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
            _CharT __c,
            size_type __pos = 0) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.

__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find() [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            _CharT __c,
            size_type __pos = 0) const  [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from __pos, searches forward for the first __n characters in __s within this string. If found, returns the index where it begins. If not found, returns npos.
References std::data(), npos, and std::size().
Referenced by std::basic_string< _CharT >::find(), std::basic_string< _CharT >::find(), std::basic_string< _CharT >::find(), and std::basic_string< _CharT >::find_first_of().

find() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from __pos, searches forward for the first __n characters in __s within this string. If found, returns the index where it begins. If not found, returns npos.

find() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from __pos, searches forward for the value of __s within this string. If found, returns the index where it begins. If not found, returns npos.

find() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

find() [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a string.

Parameters

__str	String to locate.

__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

find_first_not_of() [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
            _CharT __c,
            size_type __pos = 0) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_first_not_of() [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            _CharT __c,
            size_type __pos = 0) const  [noexcept]
```

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from.
__n	Number of characters from __s to consider.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_first_not_of() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from.
__n	Number of characters from __s to consider.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
```

```
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_not_of() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_first_not_of(), std::basic_string< _CharT >::find_first_not_of(), and std::basic_string< _CharT >::find_first_not_of().

find_first_not_of() [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            _CharT __c,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for the character *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to find(__c, __pos).

find_first_of() [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
```

```
            _CharT __c,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for the character *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to find(__c, __pos).

find_first_of() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C substring.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from.
__n	Number of characters from s to search for.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_first_of() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find position of a character of C substring.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from.
__n	Number of characters from s to search for.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of C string.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const _CharT * __s,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character of C string.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_first_of() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_first_of(), and std::basic_string< _CharT >::find_first_of().

find_first_of() [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0) const  [inline], [noexcept]
```

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
```

```
            _CharT __c,
            size_type __pos = npos) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_last_not_of() [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            _CharT __c,
            size_type __pos = npos) const  [noexcept]
```

Find last position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.

__pos	Index of character to search back from.
__n	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_last_not_of() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find last position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from.
__n	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_not_of() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_last_not_of(), std::basic_string< _CharT >::find_last_not_of(), and std::basic_string< _CharT >::find_last_not_of().

find_last_not_of() [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
```

```
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            _CharT __c,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to rfind(__c, __pos).

find_last_of() [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            _CharT __c,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to rfind(__c, __pos).

find_last_of() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C substring.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

find_last_of() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find last position of a character of C substring.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of C string.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character of C string.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

find_last_of() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
```

```
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_last_of(), and std::basic_string< _CharT >::find_last_of().

find_last_of() [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

front() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::front ()  [inline]
```

Returns a read/write reference to the data at the first element of the string.

front() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::front () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

front() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::front () const  [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

front() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::front ()  [inline], [nodiscard], [constexpr],
[noexcept]
```

Returns a read/write reference to the data at the first element of the string.

get_allocator() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
allocator_type std::basic_string< _CharT, _Traits, _Alloc >::get_allocator () const  [inline],
[nodiscard], [constexpr], [noexcept]
```

Return copy of allocator used to construct this string.

Referenced by std::basic_string< _CharT >::~basic_string(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::clear
std::operator+(), std::operator+(), std::operator+(), std::operator+(), std::operator+(), reserve(), reserve(), std::basic_string< _CharT, std::c
and swap().

get_allocator() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
allocator_type std::basic_string< _CharT, _Traits, _Alloc >::get_allocator () const  [inline],
[noexcept]
```

Return copy of allocator used to construct this string.

insert() [1/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            __const_iterator __p,
            _CharT __c)  [inline], [constexpr]
```

Insert one character.

Parameters

_↩ _p	Iterator referencing position in string to insert at.
_↩ _c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character __c at position referenced by __p. If adding character causes the length to exceed max_size(), length_error is thrown. If __p is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [2/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            const_iterator __p,
            _InputIterator __beg,
            _InputIterator __end)  [inline], [constexpr]
```

Insert a range of characters.

Parameters

__p	Const_iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Returns

Iterator referencing the first inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [beg,end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [3/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            const_iterator __p,
            initializer_list< _CharT > __l)  [inline], [constexpr]
```

Insert an initializer_list of characters.

Parameters

_↩ _p	Iterator referencing location in string to insert at.
_↩ _l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

insert() [4/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            const_iterator __p,
            size_type __n,
            _CharT __c)  [inline], [constexpr]
```

Insert multiple characters.

Parameters

_↩ _p	Const_iterator referencing location in string to insert at.
_↩ _n	Number of characters to insert
_↩ _c	The character to insert.

Returns

Iterator referencing the first inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts __n copies of character __c starting at the position referenced by iterator __p. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Referenced by std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), and std::basic_string< _CharT >::insert().

insert() [5/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            _CharT __c)  [inline]
```

Insert one character.

Parameters

_↩ _p	Iterator referencing position in string to insert at.
_↩ _c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [6/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
             iterator __p,
             _InputIterator __beg,
             _InputIterator __end)  [inline]
```

Insert a range of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [__beg,__end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [7/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
             iterator __p,
             initializer_list< _CharT > __l)  [inline]
```

Insert an initializer_list of characters.

Parameters

__↩ __p	Iterator referencing location in string to insert at.

_↩ _l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

insert() [8/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            size_type __n,
            _CharT __c)  [inline]
```

Insert multiple characters.

Parameters

_↩ _p	Iterator referencing location in string to insert at.
_↩ _n	Number of characters to insert
_↩ _c	The character to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts *__n* copies of character *__c* starting at the position referenced by iterator *__p*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [9/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s)  [inline], [constexpr]
```

Insert a C string.

Parameters

__pos	Position in string to insert at.

__s	The C string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos* is beyond the end of this string.

Inserts the first *n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [10/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s)  [inline]
```

Insert a C string.

Parameters

__pos	Position in string to insert at.
__s	The C string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos* is beyond the end of this string.

Inserts the first *n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [11/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s,
            size_type __n)  [inline], [constexpr]
```

Insert a C substring.

Parameters

__pos	Position in string to insert at.
__s	The C string to insert.
__n	The number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [12/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s,
            size_type __n)
```

Insert a C substring.

Parameters

__pos	Position in string to insert at.
__s	The C string to insert.
__n	The number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first __n characters of __s starting at __pos. If adding characters causes the length to exceed max_size(), length_error is thrown. If __pos is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [13/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            size_type __n,
            _CharT __c)  [inline], [constexpr]
```

Insert multiple characters.

Parameters

__pos	Index in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts __n copies of character __c starting at index __pos. If adding characters causes the length to exceed max_size(), length_error is thrown. If __pos > length(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [14/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            size_type __n,
            _CharT __c)  [inline]
```

Insert multiple characters.

Parameters

__pos	Index in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts *__n* copies of character *__c* starting at index *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* > length(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [15/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Insert value of a string.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [16/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline]
```

Insert value of a string.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

insert() [17/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n = npos)  [inline], [constexpr]
```

Insert a substring.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.
__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos1* > size() or *__pos2* > *str.size()*.

Starting at *pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

insert() [18/18]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n = npos)  [inline]
```

Insert a substring.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.
__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos1* > size() or *__pos2* > *str.size()*.

Starting at *pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

length() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::length () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Referenced by std::basic_string< _CharT >::basic_string(), std::basic_string< _CharT >::basic_string(), std::__cxx11::collate< _CharT std::__cxx11::collate< _CharT >::do_transform(), std::basic_string< _CharT >::operator=(), std::regex_replace(), and reserve().

length() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::length () const  [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

max_size() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the size() of the largest possible string.
Referenced by std::getline(), and std::operator>>().

max_size() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size () const  [inline], [noexcept]
```

Returns the size() of the largest possible string.

operator+=() [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            _CharT __c)  [inline], [constexpr]
```

Append a character.

Parameters

_↩ _c	The character to append.

Returns

Reference to this string.

operator+=() [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            _CharT __c)  [inline]
```

Append a character.

Parameters

_↩ _c	The character to append.

Returns

Reference to this string.

operator+=() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            const _CharT * __s)  [inline], [constexpr]
```

Append a C string.

Parameters

_↩ _s	The C string to append.

Returns

Reference to this string.

operator+=() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            const _CharT * __s)  [inline]
```

Append a C string.

Parameters

_↩ _s	The C string to append.

Returns

Reference to this string.

operator+=() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

operator+=() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline]
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

operator+=() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            initializer_list< _CharT > __l)  [inline], [constexpr]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to be appended.

Returns

Reference to this string.

operator+=() [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            initializer_list< _CharT > __l)  [inline]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to be appended.

Returns

Reference to this string.

operator=() [1/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            _CharT __c)  [inline], [constexpr]
```

Set value to string of length 1.

Parameters

_↩ *_c*	Source character.

Assigning to a character makes this string length 1 and (∗this)[0] == *c*.

operator=() [2/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            _CharT __c)  [inline]
```

Set value to string of length 1.

Parameters

_↩ _*c*	Source character.

Assigning to a character makes this string length 1 and (∗this)[0] == *c*.

operator=() [3/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            basic_string< _CharT, _Traits, _Alloc > && __str)  [inline], [noexcept]
```

Move assign the value of *str* to this string.

Parameters

__*str*	Source string.

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

operator=() [4/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            basic_string< _CharT, _Traits, _Alloc > && __str)  [inline], [constexpr], [noexcept]
```

Move assign the value of *str* to this string.

Parameters

__*str*	Source string.

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

operator=() [5/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            const _CharT * __s)  [inline], [constexpr]
```

Copy contents of *s* into this string.

Parameters

_↩ _*s*	Source null-terminated string.

operator=() [6/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            const _CharT * __s)  [inline]
```

Copy contents of *s* into this string.

Parameters

_↩ _s	Source null-terminated string.

operator=() [7/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Assign the value of *str* to this string.

Parameters

__str	Source string.

operator=() [8/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline]
```

Assign the value of *str* to this string.

Parameters

__str	Source string.

operator=() [9/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            initializer_list< _CharT > __l)  [inline], [constexpr]
```

Set value to string constructed from initializer list.

Parameters

↩ _↩ ↩ _↩ l	std::initializer_list.

operator=() [10/10]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            initializer_list< _CharT > __l)  [inline]
```

Set value to string constructed from initializer list.

Parameters

↩ _↩ ↩ _↩ *l*	std::initializer_list.

operator[]() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos)  [inline], [nodiscard], [constexpr]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

operator[]() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos)  [inline]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().) Unshares the string.

operator[]() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)
Referenced by std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::front(), std::basic_string< _CharT >::front(), and std::basic_string< _CharT >::front().

operator[]() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos) const  [inline], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

pop_back() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back ()  [inline]
```

Remove the last character.
The string must be non-empty.

pop_back() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back ()  [inline], [constexpr], [noexcept]
```

Remove the last character.
The string must be non-empty.

push_back() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
            _CharT __c)  [inline], [constexpr]
```

Append a single character.

Parameters

_↩ _c	Character to append.

Referenced by std::__cxx11::collate< _CharT >::do_transform(), std::basic_string< _CharT >::operator+=(), std::tr2::operator>>(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow().

push_back() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
            _CharT __c)  [inline]
```

Append a single character.

Parameters

_↩ _c	Character to append.

rbegin() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ()  [inline]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

rbegin() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin () const  [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

rbegin() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin () const  [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

rbegin() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ()  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

rend() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ()  [inline]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

rend() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend () const  [inline],
[nodiscard], [constexpr], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

rend() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend () const  [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

rend() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ()  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

replace() [1/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            __const_iterator __i1,
            __const_iterator __i2,
            const _CharT * __s)  [inline], [constexpr]
```

Replace range of characters with C string.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [2/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            __const_iterator __i1,
            __const_iterator __i2,
            const _CharT * __s,
            size_type __n)  [inline], [constexpr]
```

Replace range of characters with C substring.

Parameters

_↩ _*i1*	Iterator referencing start of range to replace.
_↩ _*i2*	Iterator referencing end of range to replace.
_↩ _*s*	C string value to insert.
_↩ _*n*	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first __*n* characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [3/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            __const_iterator __i1,
            __const_iterator __i2,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [4/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            __const_iterator __i1,
            __const_iterator __i2,
            size_type __n,
            _CharT __c)  [inline], [constexpr]
```

Replace range of characters with multiple characters.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _n	Number of characters to insert.
_↩ _c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, *__n* copies of *__c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [5/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            const_iterator __i1,
            const_iterator __i2,
            _InputIterator __k1,
            _InputIterator __k2)  [inline], [constexpr]
```

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [6/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            const_iterator __i1,
            const_iterator __i2,
            initializer_list< _CharT > __l)  [inline], [constexpr]
```

Replace range of characters with initializer_list.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.

_↩ _l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [7/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            _InputIterator __k1,
            _InputIterator __k2)  [inline]
```

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [8/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s)  [inline]
```

Replace range of characters with C string.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [9/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s,
            size_type __n)  [inline]
```

Replace range of characters with C substring.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _s	C string value to insert.
_↩ _n	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first *__n* characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [10/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline]
```

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [11/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            initializer_list< _CharT > __l)  [inline]
```

Replace range of characters with initializer_list.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [12/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
             iterator __i1,
             iterator __i2,
             size_type __n,
             _CharT __c)  [inline]
```

Replace range of characters with multiple characters.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _n	Number of characters to insert.
_↩ _c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, __*n* copies of __*c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [13/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline], [constexpr]
```

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos+__n) from this string. In place, the value of __*str* is inserted. If __*pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Referenced by std::basic_string< _CharT >::append(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), and std::basic_string< _CharT >::replace().

replace() [14/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
```

```
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str)  [inline]
```

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos+__n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [15/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            const _CharT * __s)  [inline], [constexpr]
```

Replace characters with value of a C string.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the characters of __*s* are inserted. If __*pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [16/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            const _CharT * __s)  [inline]
```

Replace characters with value of a C string.

Parameters

__*pos*	Index of first character to replace.
__*n1*	Number of characters to be replaced.
__*s*	C string to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the characters of __*s* are inserted. If __*pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [17/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::replace
(
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2)  [inline], [constexpr]
```

Replace characters with value of a C substring.

Parameters

__*pos*	Index of first character to replace.
__*n1*	Number of characters to be replaced.
__*s*	C string to insert.

__n2	Number of characters from *s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos1* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the first *__n2* characters of *__s* are inserted, or all of *__s* if *__n2* is too large. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [18/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2)
```

Replace characters with value of a C substring.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.
__n2	Number of characters from *s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos1* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the first *__n2* characters of *__s* are inserted, or all of *__s* if *__n2* is too large. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [19/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
```

```
            size_type __pos,
            size_type __n1,
            size_type __n2,
            _CharT __c)  [inline], [constexpr]
```

Replace characters with multiple characters.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__n2	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, *__n2* copies of *__c* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [20/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            size_type __n2,
            _CharT __c)  [inline]
```

Replace characters with multiple characters.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__n2	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, *__n2* copies of *__c* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [21/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n2 = npos)  [inline], [constexpr]
```

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > __str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos1,__pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

replace() [22/22]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos1,
            size_type __n1,
```

```
        const basic_string< _CharT, _Traits, _Alloc > & __str,
        size_type __pos2,
        size_type __n2 = npos)  [inline]
```

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > __str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos1,__pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

reserve() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve ()  [constexpr]
```

Equivalent to shrink_to_fit().
References capacity(), get_allocator(), and length().
Referenced by std::basic_string< _CharT >::push_back(), and std::basic_string< _CharT >::shrink_to_fit().

reserve() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve ()
```

Equivalent to shrink_to_fit().

reserve() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
            size_type __res_arg)  [constexpr]
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.
References capacity(), get_allocator(), and std::size().
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:
std::tr2::operator>>(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow().

reserve() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
            size_type __res_arg)
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

resize() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n)  [inline], [constexpr]
```

Resizes the string to the specified number of characters.

Parameters

__n	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

resize() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n)  [inline]
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

resize() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n,
            _CharT __c)  [constexpr]
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.
_↩ _c	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to __c.
References append(), erase(), and size().
Referenced by std::basic_string< _CharT >::resize().

resize() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n,
            _CharT __c)
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.
_↩ _c	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to __c.

rfind() [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
            _CharT __c,
            size_type __pos = npos) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
References npos, and std::size().

rfind() [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            _CharT __c,
            size_type __pos = npos) const  [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

rfind() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [nodiscard], [constexpr], [noexcept]
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
References std::min(), npos, and std::size().

rfind() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n) const  [noexcept]
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

rfind() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr]
```

Find last position of a C string.

Parameters

__s	C string to locate.

__pos	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

rfind() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            const _CharT * __s,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

rfind() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [nodiscard], [constexpr], [noexcept]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Referenced by std::basic_string< _CharT >::find_last_of(), std::basic_string< _CharT >::rfind(), std::basic_string< _CharT >::rfind(), std::basic_string< _CharT >::rfind(), and std::basic_string< _CharT >::rfind().

rfind() [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos) const  [inline], [noexcept]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

shrink_to_fit() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::shrink_to_fit ()  [inline], [constexpr], [noexcept]
```

A non-binding request to reduce capacity() to size().

shrink_to_fit() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::shrink_to_fit ()  [inline], [noexcept]
```

A non-binding request to reduce capacity() to size().

size() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::size () const  [inline], [nodiscard],
[constexpr], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Referenced by std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset(), std::basic_string< _CharT >::append(), std::basic_string< _CharT >::append(), std::basic_regex< char >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::assign(), std::basic_string< _CharT >::at(), std::basic_string< _CharT >::at(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::back(), std::basic_string< _CharT >::cend(), std::basic_string< _CharT >::compare(), std::basic_string< _CharT >::compare(), std::basic_string< _CharT >::compare(), std::basic_string< _CharT >::empty(), std::basic_string< _CharT >::end(), std::basic_string< _CharT >::end(), std::basic_string< _CharT >::end(), std::basic_string< _CharT >::find(), std::basic_string< _CharT >::find_first_not_of(), std::basic_string< _CharT >::find_first_of(), std::basic_string< _CharT >::find_last_of(), std::match_results< _BidirectionalIterator, polymorphic_allocator< sub↩ _match< _BidirectionalIterator > > >< const char * >::format(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::fr std::basic_string< _CharT >::insert(), std::basic_string< _CharT >::length(), std::operator+(), std::operator+(), std::operator+(), std::operator+(), std::operator+(), std::basic_string< _CharT >::operator=(), std::operator==(), std::tr2::operator>>(), std::basic_string< _CharT >::operator[](), std::basic_string< _CharT >::operator[](), std::basic_string< _CharT std::basic_string< _CharT >::pop_back(), std::basic_string< _CharT >::push_back(), std::basic_string< _CharT >::replace(), std::basic_string< _CharT >::replace(), resize(), std::basic_stringbuf< char >::str(), std::wstring_convert< _Codecvt, _Elem, _Wide_allo std::regex_traits< _CharT >::transform(), and std::regex_traits< _CharT >::transform_primary().

size() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::size () const  [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

substr() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr (
            size_type __pos = 0,
            size_type __n = npos) const  [inline], [nodiscard], [constexpr]
```

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a new string using the *__n* characters starting at *__pos*. If the string is too short, use the remainder of the characters. If *__pos* is beyond the end of the string, out_of_range is thrown.

substr() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr (
            size_type __pos = 0,
            size_type __n = npos) const  [inline]
```

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a new string using the *__n* characters starting at *__pos*. If the string is too short, use the remainder of the characters. If *__pos* is beyond the end of the string, out_of_range is thrown.

subview() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string_view< _CharT, _Traits > std::basic_string< _CharT, _Traits, _Alloc >::subview (
            size_type __pos = 0,
            size_type __n = npos) const  [inline], [nodiscard], [constexpr]
```

Get a subview.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in subview (default remainder).

Returns

The subview.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a subview using the __n characters starting at __pos. If the string is too short, use the remainder of the characters. If __pos is beyond the end of the string, out_of_range is thrown.

subview() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string_view< _CharT, _Traits > std::basic_string< _CharT, _Traits, _Alloc >::subview (
            size_type __pos = 0,
            size_type __n = npos) const  [inline], [nodiscard], [constexpr]
```

Get a subview.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in subview (default remainder).

Returns

The subview.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a subview using the __n characters starting at __pos. If the string is too short, use the remainder of the characters. If __pos is beyond the end of the string, out_of_range is thrown.

swap() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::swap (
            basic_string< _CharT, _Traits, _Alloc > & __s)  [constexpr], [noexcept]
```

Swap contents with another string.

Parameters

_↩ _s	String to swap with.

Exchanges the contents of this string with that of __s in constant time.
References basic_string(), and get_allocator().
Referenced by std::basic_string< _CharT >::assign(), and std::basic_string< _CharT >::operator=().

swap() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::swap (
            basic_string< _CharT, _Traits, _Alloc > & __s)  [noexcept]
```

Swap contents with another string.

Parameters

_↩ _s	String to swap with.

Exchanges the contents of this string with that of __s in constant time.

6.249.4 Member Data Documentation

npos

```
template<typename _CharT, typename _Traits, typename _Alloc>
const size_type std::basic_string< _CharT, _Traits, _Alloc >::npos  [static]
```

Value returned by various member functions when they fail.
Referenced by std::bitset< _Nb >::bitset(), std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset(), find(), find(), find_first_not_of(), find_first_not_of(), find_first_of(), find_last_not_of(), find_last_not_of(), find_last_of(), rfind(), and rfind().

6.250.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::basic_string_view< _CharT, _Traits >

A non-owning reference to a string.

Template Parameters

_CharT	Type of character
_Traits	Traits for character type, defaults to char_traits<_CharT>.

A basic_string_view looks like this:

```
_CharT*     _M_str
size_t      _M_len
```

The documentation for this class was generated from the following files:

- string_view
- bits/string_view.tcc

6.251.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::experimental::filesystem::v1::basic_string_view< _CharT, _Traits >

A non-owning reference to a string.

Template Parameters

_CharT	Type of character
_Traits	Traits for character type, defaults to char_traits<_CharT>.

A basic_string_view looks like this:

```
_CharT*     _M_str
size_t      _M_len
```

The documentation for this class was generated from the following files:

- string_view
- bits/string_view.tcc

6.252 std::experimental::fundamentals_v1::basic_string_view< _CharT, _Traits > Class Template Reference

6.253.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringbuf< _CharT, _Traits, _Alloc >

The actual work of input and output (for std::string).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.)
For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

6.253.2 Constructor & Destructor Documentation

basic_stringbuf() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf ()  [inline]
```

Starts with an empty string buffer.
The default constructor initializes the parent class using its own default ctor.

basic_stringbuf() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
            ios_base::openmode __mode)  [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

The default constructor initializes the parent class using its own default ctor.

basic_stringbuf() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
            const __string_type & __str,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

6.253.3 Member Function Documentation

eback()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::eback () const  [inline], [protected], [inherited]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _Cha std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

egptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::egptr () const  [inline], [protected], [inherited]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_stringbuf< char std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow(), std::basic_filebuf< _CharT, _Traits >::xsgetn(), and xsgetn().

epptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::epptr () const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_streambuf< char_type, traits_type >::sputc(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and xsputn().

gbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::gbump (
            int __n)  [inline], [protected], [inherited]
```

Moving the read position.

Parameters

_↩ _n	The delta by which to move.

This just advances the read position without returning any data.
Referenced by std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_streambuf< char_type, traits_type >::uflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

getloc()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::getloc () const  [inline], [inherited]
```

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.
Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

gptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::gptr () const  [inline], [protected], [inherited]
```

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy
std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_stringbuf< _CharT,
std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< cha
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_streambuf< char_type, traits_type >::sgetc(),
std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_stringbuf< char >::showmanyc(), std::basic_streambuf< char_type, traits
std::basic_streambuf< char_type, traits_type >::sungetc(), std::basic_streambuf< char_type, traits_type >::uflow(),
std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(),
std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow(), std::basic_filebuf< _CharT, _Traits >::xsgetn(), and
xsgetn().

imbue()

```
template<typename _CharT, typename _Traits>
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
             const locale & __loc)  [inline], [protected], [virtual], [inherited]
```

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >,
std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >,
and std::basic_filebuf< wchar_t >.
Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

in_avail()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ()  [inline], [inherited]
```

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

overflow()

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↩
Alloc >::overflow (
            int_type __c = traits_type::eof())  [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

_↩ _c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __c, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __c is not `eof()`.
For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_mode, std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::epptr(), std::basic_streambuf< _CharT, _Tra std::ios_base::in, std::max(), std::min(), std::ios_base::out, std::basic_streambuf< _CharT, _Traits >::pbase(), std::basic_streambuf< _CharT, _Traits >::pbump(), std::basic_streambuf< _CharT, _Traits >::pptr(), std::basic_string< _CharT, _Traits, std::basic_string< _CharT, _Traits, _Alloc >::reserve(), and std::basic_streambuf< _CharT, _Traits >::setg().

pbackfail()

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↩
Alloc >::pbackfail (
            int_type __c = traits_type::eof())  [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

_↩ _c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_mode, std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::gbump(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::ios_base::out.

pbase()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pbase () const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, std::basic_stringbuf< char >::str(), std::basic_filebuf< _CharT, _Traits >::sync(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

pbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::pbump (
            int __n)  [inline], [protected], [inherited]
```

Moving the write position.

Parameters

_↩ _n	The delta by which to move.

This just advances the write position without returning any data.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), and std::basic_streambuf< char_type, traits_type >::sputc().

pptr()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf< _CharT, _Traits >::pptr () const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_streambuf< char_t std::basic_filebuf< _CharT, _Traits >::sync(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and xsputn().

pubimbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
            const locale & __loc)  [inline], [inherited]
```

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

pubseekoff()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline], [inherited]
```

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

pubseekpos()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
```

```
            pos_type __sp,
            ios_base::openmode __mode = ios_base::in | ios_base::out)  [inline], [inherited]
```

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

pubsetbuf()

```
template<typename _CharT, typename _Traits>
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Entry points for derived buffer functions.
The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

pubsync()

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync ()  [inline], [inherited]
```

Calls virtual sync function.
Referenced by std::basic_istream< _CharT, _Traits >::sync().

sbumpc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ()  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_streambuf< char_type, traits_type >::snextc().

seekoff()

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↩
Alloc >::seekoff (
            off_type ,
            ios_base::seekdir ,
            ios_base::openmode  = ios_base::in | ios_base::out)  [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_mode, std::ios_base::cur, std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::e
std::ios_base::end, std::basic_streambuf< _CharT, _Traits >::epptr(), std::basic_streambuf< _CharT, _Traits >::gptr(),
std::ios_base::in, std::ios_base::out, std::basic_streambuf< _CharT, _Traits >::pbase(), std::basic_streambuf< _CharT, _Traits >::pptr(),
and std::basic_streambuf< _CharT, _Traits >::setg().

seekpos()

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↩
Alloc >::seekpos (
            pos_type ,
            ios_base::openmode  = ios_base::in | ios_base::out)  [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_mode, std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::egptr(),
std::basic_streambuf< _CharT, _Traits >::epptr(), std::ios_base::in, std::ios_base::out, std::basic_streambuf< _CharT, _Traits >::pbase()
and std::basic_streambuf< _CharT, _Traits >::setg().

setbuf()

```
template<typename _CharT, typename _Traits, typename _Alloc>
virtual __streambuf_type * std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf (
            char_type * __s,
            streamsize __n)  [inline], [protected], [virtual]
```

Manipulates the buffer.

Parameters

_↩ _s	Pointer to a buffer area.
_↩ _n	Size of __s.

Returns

`this`

If no buffer has already been created, and both __s and __n are non-zero, then __s is used as a buffer; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.↩ buffering for more.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.

setg()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
```

```
            char_type * __gbeg,
            char_type * __gnext,
            char_type * __gend)  [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert(), std::basic_filebuf< char_type, traits_type >::_M_create
std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_filebuf< char_type, traits_type >::_M_set_buffer(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(),
std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setp (
            char_type * __pbeg,
            char_type * __pend)  [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert(), and std::basic_filebuf< char_type, traits_type >::_M_s

sgetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ()  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ign
and std::basic_streambuf< char_type, traits_type >::snextc().

sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Entry point for xsgetn.

Parameters

_↩ _s	A buffer area.
_↩ _n	A count.

Returns xsgetn(__s,__n). The effect is to fill __s[0] through __s[__n-1] with characters from the input sequence, if possible.

showmanyc()

```
template<typename _CharT, typename _Traits, typename _Alloc>
virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc ()  [inline], [protected],
[virtual]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*

The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

snextc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc ()  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.
Referenced by std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, char_traits< _CharT > >::get(), and std::basic_istream< _CharT, char_traits< _CharT > >::readsome().

sputbackc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
            char_type __c)  [inline], [inherited]
```

Pushing characters back into the input stream.

Parameters

_↩ _c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but __c is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be __c.
Referenced by std::basic_istream< _CharT, _Traits >::putback().

sputc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
            char_type __c)  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _c	A character to output.

Returns

__c, if possible.

One of two public output functions.
If a write position is available for the output sequence (i.e., the buffer is not full), stores __c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↩ __c)`.
Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::overflow().

sputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
            const char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _s	A buffer read area.
_↩ _n	A count.

One of two public output functions.
Returns xsputn(__s,__n). The effect is to write __s[0] through __s[__n-1] to the output sequence, if possible.

str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str () const &  [inline], [nodiscard]
```

Copying out the string buffer.

Returns

A copy of one of the underlying sequences.

If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1

str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str (
             const __string_type & __s)  [inline]
```

Setting a new buffer.

Parameters

_↩ _s	The string to use as a new sequence.

Deallocates any previous stored sequence, then copies *s* to use as a new one.

sungetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ()  [inline], [inherited]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.
Referenced by std::basic_istream< _CharT, _Traits >::unget().

sync()

```
template<typename _CharT, typename _Traits>
virtual int std::basic_streambuf< _CharT, _Traits >::sync ()  [inline], [protected], [virtual],
[inherited]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, std::basic_filebuf< char_type, traits_type >, std::basic_filebuf< wchar_t >, and std::wbuffer_convert< _Codecvt, _Elem, _Tr >.
Referenced by std::basic_streambuf< char_type, traits_type >::pubsync().

uflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ()  [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.
Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.
Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), and xsgetn().

underflow()

```
template<class _CharT, class _Traits, class _Alloc>
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↩
Alloc >::underflow ()  [protected], [virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.
For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.
A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
References _M_mode, std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::ios_base::in.

xsgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (
            char_type * __s,
            streamsize __n)  [protected], [virtual], [inherited]
```

Multiple character extraction.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __s[0] through __s[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __n characters have been copied, or when `traits::eof()` would be copied.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, and std::basic_filebuf< char_type, traits_type >.
References egptr(), gptr(), std::min(), and uflow().
Referenced by std::basic_streambuf< char_type, traits_type >::sgetn().

xsputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::xsputn (
            const char_type * __s,
            streamsize __n)  [protected], [virtual], [inherited]
```

Multiple character insertion.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __s[0] through __s[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< char >, and std::basic_filebuf< char_type, traits_type >.
References epptr(), std::min(), overflow(), and pptr().
Referenced by std::basic_streambuf< char_type, traits_type >::sputn().

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.254.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringstream< _CharT, _Traits, _Alloc >

Controlling input and output for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports reading from and writing to objects of type std::basic_string, using the inherited functions from std::basic_iostream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.

6.254.2 Member Typedef Documentation

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)  [inherited]
```

The type of an event callback function.

Parameters

_↩ _e	One of the members of the event enum.
_↩ _b	Reference to the ios_base object.
_↩ _i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield

- basefield
- floatfield

iostate

`typedef _Ios_Iostate std::ios_base::iostate [inherited]`
This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

openmode

`typedef _Ios_Openmode std::ios_base::openmode [inherited]`
This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

`typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`
This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

6.254.3 Member Enumeration Documentation

event

`enum std::ios_base::event [inherited]`
The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

6.254.4 Constructor & Destructor Documentation

basic_stringstream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream ()  [inline]
```

Default constructor starts with an empty string buffer.
Initializes sb using the mode in|out, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

basic_stringstream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
            ios_base::openmode __m)  [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

_↩ _m	Whether the buffer can read, or write, or both.

Initializes sb using the mode from __m, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

basic_stringstream() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
            const __string_type & __str,
            ios_base::openmode __m = ios_base::out | ios_base::in)  [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__m	Whether the buffer can read, or write, or both.

Initializes sb using __str and __m, and passes &sb to the base class initializer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

~basic_stringstream()

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringstream< _CharT, _Traits, _Alloc >::~basic_stringstream ()  [inline]
```

The destructor does nothing.
The buffer is deallocated by the stringbuf object, not the formatting stream.

6.254.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc () const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter
std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIte
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::num_put< _CharT, _OutIter
std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry().

clear()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit)  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
References std::ios_base::badbit, exceptions(), rdbuf(), and rdstate().
Referenced by std::basic_ios< char_type, traits_type >::exceptions(), std::basic_fstream< char >::open(), std::basic_fstream< char >::
std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(),
std::basic_ofstream< char >::open(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::putback(),
rdbuf(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits
and std::basic_istream< _CharT, _Traits >::unget().

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs)  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
References basic_ios(), std::__addressof(), exceptions(), fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), tie(), std::tie(), and std::ios_base::width().

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const  [inline], [nodiscard], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Referenced by clear(), and copyfmt().

exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except)  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr « "Setting badbit\n";
```

```
    f.setstate (std::ios_base::badbit);

    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Referenced by std::basic_ios< char_type, traits_type >::operator bool(), std::basic_ios< char_type, traits_type >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits

fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const  [inline], [nodiscard], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Referenced by copyfmt(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::o

fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
             char_type __ch)  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

flags() [1/2]

```
fmtflags std::ios_base::flags () const  [inline], [nodiscard], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >
std::num_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::chrono::operator<<(),
std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator<<,
std::__detail::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(), std::operator>>(),
std::operator>>(), std::operator>>(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB

flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

flush()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush ()  [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::flush().

gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const  [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().
Referenced by std::basic_istream< char_type, traits_type >::get(), and std::basic_istream< char_type, traits_type >::get().

get() [2/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb)  [inline], [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns `get`(__sb,widen('\n')).

get() [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim)  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

get() [4/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c)  [inherited]
```

Simple extraction.

Parameters

_↩ _c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in __c. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

get() [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

*this

Returns get(__s,__n,widen('\n')).

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n)  [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen('\n'))`.

getline() [2/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

getline() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim)  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
References _M_gcount, and std::ios_base::goodbit.
Referenced by std::basic_istream< char_type, traits_type >::getline().

getloc()

```
locale std::ios_base::getloc () const  [inline], [nodiscard], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::basic_ios< _CharT, _Tr
std::chrono::operator<<(), std::operator>>(), std::operator>>(), and std::ws().

good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const  [inline], [nodiscard], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

ignore() [1/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >::sbumpc().
Referenced by std::basic_istream< char_type, traits_type >::ignore().

ignore() [2/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n)  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

ignore() [3/4]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            char __delim)  [inline], [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

ignore() [4/4]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim)  [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide four overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
References _M_gcount, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_streambuf< _CharT, _Traits >:

imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc)  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩
html
References std::ios_base::getloc(), std::ios_base::imbue(), and rdbuf().
Referenced by std::chrono::operator<<().

init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb)  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b

iword()

```
long & std::ios_base::iword (
            int __ix)  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
References iword().
Referenced by iword().

narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html

operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const  [inline], [explicit], [nodiscard],
[inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator!  () const  [inline], [nodiscard], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

operator<<() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(* __pf )(__ostream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb)  [inherited]
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p)  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(* __pf )(ios_base &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f)  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            short __n)  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
References basic_ostream(), std::ios_base::badbit, std::ostreambuf_iterator< _CharT, _Traits >::failed(), std::ios_base::goodbit, std::num_put< _CharT, _OutIter >::put(), std::basic_ios< _CharT, _Traits >::setstate(), and std::use_facet().

operator<<() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned int __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long long __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned short __n)  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator>>() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(* __pf )(__ios_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws. For more information, see the iomanip header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits>

            __istream_type &(* __pf )(__istream_type &))  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws. For more information, see the iomanip header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb)  [inherited]
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the __sb streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

operator>>() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            bool & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            double & __f)  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long long & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned short & __n)  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
            void *& __p)  [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void )  [inherited]
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

precision() [1/2]

```
streamsize std::ios_base::precision () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::chrono::operator<<().

precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec)  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

put()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c)  [inherited]
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits
Referenced by std::endl(), and std::ends().

putback()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
             char_type __c)  [inherited]
```

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().
Referenced by std::operator<<().

pword()

```
void *& std::ios_base::pword (
             int __ix)  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _*ix*	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb)  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

References clear().

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type * std::basic_stringstream< _CharT, _Traits, _Alloc >::rdbuf () const  [inline],
[nodiscard]
```

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const  [inline], [nodiscard], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Referenced by std::basic_ios< char_type, traits_type >::bad(), clear(), std::basic_ios< char_type, traits_type >::eof(), std::basic_ios< char_type, traits_type >::fail(), std::basic_ios< char_type, traits_type >::good(), std::basic_istream< _CharT, _Traits >::p std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char_type, traits_type > and std::basic_istream< _CharT, _Traits >::unget().

read()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References _M_gcount.

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n)  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into __*s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
References _M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::
and std::basic_ios< _CharT, _Traits >::setstate().

register_callback()

```
void std::ios_base::register_callback (
             event_callback __fn,
             int __index)  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
             off_type __off,
             ios_base::seekdir __dir)  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_ios< _CharT, _Traits >::setstate().

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos)  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir)  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos)  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
References std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Referenced by std::__detail::operator>>().

setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask)  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state)  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(),
std::basic_istream< _CharT, _Traits >::get(), std::getline(), std::getline(), std::basic_fstream< char >::open(),
std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(),
std::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::ope
std::operator>>(), std::operator>>(), std::operator>>(), std::tr2::operator>>(), std::basic_ostream< _CharT, _Traits >::put(),
std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Tra
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_stringstream< _CharT, _Traits, _Alloc >::str () const &  [inline], [nodiscard]
```

Copying out the string buffer.

Returns

```
rdbuf()->str()
```

str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (
            const __string_type & __s)  [inline]
```

Setting a new buffer.

Parameters

__s	The string to use as a new sequence.

Calls `rdbuf()->str(s)`.

sync()

```
template<typename _CharT, typename _Traits>
int std::basic_istream< _CharT, _Traits >::sync (
            void )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

sync_with_stdio()

```
bool std::ios_base::sync_with_stdio (
            bool __sync = true)  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/↩libstdc++/manual/fstreams.html#std.io.filestreams.binary

tellg()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void )  [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

tellp()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()  [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
References std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf()

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie () const  [inline],
[nodiscard], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and copyfmt().

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr)  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

unget()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void )  [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References _M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().
Referenced by std::__detail::operator>>().

unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask)  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c) const  [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at https://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Referenced by std::endl(), std::basic_ios< char_type, traits_type >::fill(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::get(), std::basic_istream< char_type, traits_type >::getline(), std::getline(), std::getline(), std::operator<<(), std::operator<<(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F and std::tr2::operator>>().

width() [1/2]

```
streamsize std::ios_base::width () const  [inline], [nodiscard], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::operator>>().

width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide)  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

write()

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n)  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
int std::ios_base::xalloc () throw ( )   [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

6.254.6 Member Data Documentation

_M_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount  [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see gcount().
Referenced by get(), get(), get(), get(), getline(), ignore(), ignore(), ignore(), putback(), read(), readsome(), and unget().

adjustfield

```
const fmtflags std::ios_base::adjustfield  [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

app

```
const openmode std::ios_base::app  [static], [inherited]
```

Seek to end before each write.
Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

ate

```
const openmode std::ios_base::ate  [static], [inherited]
```

Open and seek to end immediately after opening.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

badbit

```
const iostate std::ios_base::badbit  [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::basic_ios< _CharT, _Traits >::clear(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_typ std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >:: std::basic_istream< _CharT, _Traits >::tellg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

basefield

```
const fmtflags std::ios_base::basefield  [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

beg

```
const seekdir std::ios_base::beg  [static], [inherited]
```

Request a seek relative to the beginning of the stream.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

binary

const openmode std::ios_base::binary [static], [inherited]
Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

boolalpha

const fmtflags std::ios_base::boolalpha [static], [inherited]
Insert/extract bool in alphabetic rather than numeric format.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

cur

const seekdir std::ios_base::cur [static], [inherited]
Request a seek relative to the current position within the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

dec

const fmtflags std::ios_base::dec [static], [inherited]
Converts integer input or generates integer output in decimal base.
Referenced by std::dec(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::opera and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0xD2511F53, 0xBB67AE85 >::operator>>.

end

const seekdir std::ios_base::end [static], [inherited]
Request a seek relative to the current end of the sequence.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

eofbit

const iostate std::ios_base::eofbit [static], [inherited]
Indicates that an input operation reached the end of an input sequence.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >:: std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type, traits_type >::get(), std::basic_istream< _CharT, _Tra std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_iostream< char_type, t std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, char_traits std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

failbit

const iostate std::ios_base::failbit [static], [inherited]
Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_fstream< char >::close(), std::basic_ifstream< char >
std::basic_ofstream< char >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname
std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_iostream< char_type,
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(),
std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(),
std::basic_ifstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(),
std::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(),
std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_iostream< char_type, traits_type >::seekg(),
std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >
and std::basic_ostream< _CharT, _Traits >::seekp().

fixed

```
const fmtflags std::ios_base::fixed  [static], [inherited]
```
Generate floating-point output in fixed-point notation.
Referenced by std::fixed(), and std::hexfloat().

floatfield

```
const fmtflags std::ios_base::floatfield  [static], [inherited]
```
A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

goodbit

```
const iostate std::ios_base::goodbit  [static], [inherited]
```
Indicates all is well.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(),
std::time_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::d
std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >:
std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::get(),
std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore()
std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_iostream< char_type, traits_
std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_iostream< char_type, traits_type >::operator>>(),
std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(),
std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::
std::basic_iostream< char_type, traits_type >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _T
std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, char_traits< _CharT > >::tellg(), std::basic_istream< _Cha
and std::ws().

hex

```
const fmtflags std::ios_base::hex  [static], [inherited]
```
Converts integer input or generates integer output in hexadecimal base.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and
std::hex().

in

```
const openmode std::ios_base::in  [static], [inherited]
```
Open for input. Default for `ifstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b
std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstream(), std::basic_ifstream< char >::basic_ifstrea
std::basic_istringstream< char >::basic_istringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char >
std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(),

std::basic_fstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_ifstream< char >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::p std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_streambuf< char_type, traits std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_streambuf< char_type, trait std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< char >::seekpos(), std::basic_filebuf< _CharT, _Traits std::basic_stringbuf< char >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_filebuf< _CharT, _Traits >::underfl std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

internal

```
const fmtflags std::ios_base::internal  [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Referenced by std::internal().

left

```
const fmtflags std::ios_base::left  [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.).
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::left(), and std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0

oct

```
const fmtflags std::ios_base::oct  [static], [inherited]
```

Converts integer input or generates integer output in octal base.
Referenced by std::oct().

out

```
const openmode std::ios_base::out  [static], [inherited]
```

Open for output. Default for `ofstream` and fstream.
Referenced by std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::basic_fstream(), std::basic_fstream< char >::b std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofstream(), std::basic_ofstream< char >::basic_ofs std::basic_ostringstream< char >::basic_ostringstream(), std::basic_stringbuf< char >::basic_stringbuf(), std::basic_stringstream< char std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_fstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_ofstream< char >::open(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::o std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_streambuf< char_type, traits_type >::pubseekoff(), std::basic_streambuf< char_type, traits_type >::pubseekpos(), std::basic_streambuf< char_type, traits_type >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< char >::seekoff(), std::basic_ostream< _CharT, _Traits std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_streambuf< char_type, traits_type >::seekpos(), std::basic_stringbuf< _Cha std::basic_stringbuf< char >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsput

right

```
const fmtflags std::ios_base::right  [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.).
Referenced by std::right().

scientific

```
const fmtflags std::ios_base::scientific  [static], [inherited]
```

Generates floating-point output in scientific notation.
Referenced by std::hexfloat(), and std::scientific().

showbase

```
const fmtflags std::ios_base::showbase  [static], [inherited]
```
Generates a prefix indicating the numeric base of generated integer output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

showpoint

```
const fmtflags std::ios_base::showpoint  [static], [inherited]
```
Generates a decimal-point character unconditionally in generated floating-point output.
Referenced by std::noshowpoint(), and std::showpoint().

showpos

```
const fmtflags std::ios_base::showpos  [static], [inherited]
```
Generates a + sign in non-negative generated numeric output.
Referenced by std::noshowpos(), and std::showpos().

skipws

```
const fmtflags std::ios_base::skipws  [static], [inherited]
```
Skips leading white space before certain input operations.
Referenced by std::noskipws(), std::__detail::operator>>(), std::philox_engine< uint_fast32_t, 32, 4, 10, 0xCD9E8D57, 0x9E3779B9, 0x
and std::skipws().

trunc

```
const openmode std::ios_base::trunc  [static], [inherited]
```
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf  [static], [inherited]
```
Flushes output after each output operation.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry(), std::nounitbuf(), and std::unitbuf().

uppercase

```
const fmtflags std::ios_base::uppercase  [static], [inherited]
```
Replaces certain lowercase letters with their uppercase equivalents in generated output.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

Friends

- bool operator== (const bernoulli_distribution &__d1, const bernoulli_distribution &__d2)

6.255.1 Detailed Description

A Bernoulli random number distribution.
Generates a sequence of true and false values with likelihood p that true will come up and $(1-p)$ that false will appear.

Since

C++11

6.255.2 Member Typedef Documentation

result_type

```
typedef bool std::bernoulli_distribution::result_type
```

The type of the range of the distribution.

6.255.3 Constructor & Destructor Documentation

bernoulli_distribution() [1/2]

```
std::bernoulli_distribution::bernoulli_distribution () [inline]
```

Constructs a Bernoulli distribution with likelihood 0.5.
References bernoulli_distribution().
Referenced by bernoulli_distribution(), and operator==.

bernoulli_distribution() [2/2]

```
std::bernoulli_distribution::bernoulli_distribution (
            double __p)  [inline], [explicit]
```

Constructs a Bernoulli distribution with likelihood p.

Parameters

_↩ _p	[IN] The likelihood of a true result being returned. Must be in the interval $[0, 1]$.

6.255.4 Member Function Documentation

max()

```
result_type std::bernoulli_distribution::max () const  [inline]
```

Returns the least upper bound value of the distribution.
References std::numeric_limits< _Tp >::max().

min()

```
result_type std::bernoulli_distribution::min () const  [inline]
```

Returns the greatest lower bound value of the distribution.
References std::numeric_limits< _Tp >::min().

operator()()

```
template<typename _UniformRandomNumberGenerator>
result_type std::bernoulli_distribution::operator() (
            _UniformRandomNumberGenerator & __urng)  [inline]
```

Generating functions.
References operator()().
Referenced by operator()().

p()

```
double std::bernoulli_distribution::p () const  [inline]
```

Returns the p parameter of the distribution.

param() [1/2]

```
param_type std::bernoulli_distribution::param () const  [inline]
```

Returns the parameter set of the distribution.
Referenced by std::operator>>().

param() [2/2]

```
void std::bernoulli_distribution::param (
            const param_type & __param)  [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

reset()

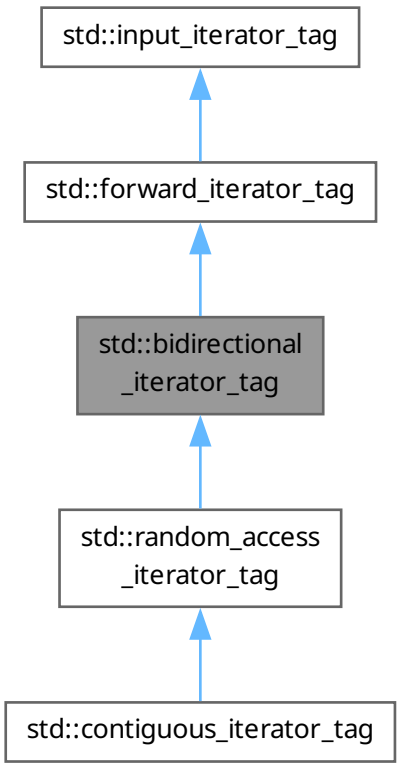
```
void std::bernoulli_distribution::reset ()  [inline]
```

Resets the distribution state.
Does nothing for a Bernoulli distribution.

6.255.5 Friends And Related Symbol Documentation

operator==

```
bool operator== (
            const bernoulli_distribution & __d1,
            const bernoulli_distribution & __d2)  [friend]
```



Return true if two Bernoulli distributions have the same parameters.
References bernoulli_distribution().

6.258.1 Detailed Description

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >

Const node iterator.

6.258.2 Member Typedef Documentation

const_reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::const_reference
```

Iterator's __const reference type.

difference_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type
```

Difference type.

iterator_category

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩
Iterator, Iterator, _Alloc >::iterator_category
```

Category.

metadata_const_reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference
```

Const metadata reference type.

metadata_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩
Iterator, Iterator, _Alloc >::metadata_type
```

Metadata type.

reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::reference
```

Iterator's reference type.

value_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::value_type
```

Iterator's value type.

6.258.3 Member Function Documentation

get_l_child()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
```

bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_cons
Node, Const_Iterator, Iterator, _Alloc >::get_l_child () const [inline]
Returns the __const node iterator associated with the left node.

get_metadata()

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::get_metadata () const [inline]
Metadata access.

get_r_child()

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_cons
Node, Const_Iterator, Iterator, _Alloc >::get_r_child () const [inline]
Returns the __const node iterator associated with the right node.

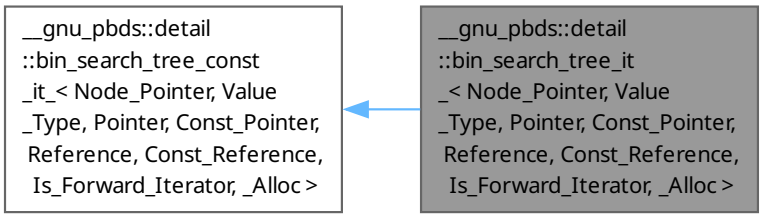
operator"!=()

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator!= (
const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
other) const [inline]
Compares (negatively) to a different iterator object.

operator∗()

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator,
_Alloc >::operator* () const [inline]
Access.

operator==()



template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator== (
const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
other) const [inline]
Compares to a different iterator object.
The documentation for this class was generated from the following file:

- bin_search_tree_/node_iterators.hpp

6.259 __gnu_pbds::detail::bin_search_tree_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc > Class Template Reference

6.260.1 Detailed Description

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >

Node iterator.

6.260.2 Member Typedef Documentation

const_reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _↩
Alloc >::const_reference
```

Iterator's __const reference type.

difference_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type  [inherited]
```

Difference type.

iterator_category

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩
Iterator, Iterator, _Alloc >::iterator_category  [inherited]
```

Category.

metadata_const_reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference  [inherited]
```

Const metadata reference type.

metadata_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩
Iterator, Iterator, _Alloc >::metadata_type  [inherited]
```

Metadata type.

reference

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _↩
Alloc >::reference
```

Iterator's reference type.

value_type

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _↩
Alloc >::value_type
```

Iterator's value type.

6.260.3 Member Function Documentation

get_l_child()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::get_l_child () const  [inline]
```

Returns the node iterator associated with the left node.

get_metadata()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::get_metadata () const  [inline], [inherited]
```

Metadata access.

get_r_child()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::get_r_child () const  [inline]
```

Returns the node iterator associated with the right node.

operator"!=()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator!= (
```

```
            const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
other) const  [inline], [inherited]
```

Compares (negatively) to a different iterator object.

operator*()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator* () const  [inline]
```

Access.

operator==()

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator== (
            const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
other) const  [inline], [inherited]
```

Compares to a different iterator object.

The documentation for this class was generated from the following file:

- bin_search_tree_/node_iterators.hpp

6.261 __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc > Struct Template Reference

```

6.261.1 Detailed Description

template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_CItr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >

Binary search tree traits, primary template.

6.261.2 Member Typedef Documentation

node_const_iterator

```
template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_CItr, class Node_↩
Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
typedef bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::b
Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.
The documentation for this struct was generated from the following file:

- bin_search_tree_/traits.hpp

6.262 __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc > Struct Template Reference

```
#include <traits.hpp>
```

Public Types

- typedef bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc > **const_reverse_iterator**

- typedef _Result result_type
- typedef _Arg2 second_argument_type

6.264.1 Detailed Description

template<typename _Arg1, typename _Arg2, typename _Result>
struct std::binary_function< _Arg1, _Arg2, _Result >

Helper for defining adaptable binary function objects.

Deprecated Deprecated in C++11, no longer in the standard since C++17.

6.264.2 Member Typedef Documentation

first_argument_type

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg1 std::binary_function< _Arg1, _Arg2, _Result >::first_argument_type
```

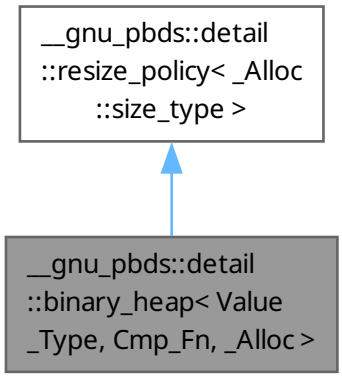
`first_argument_type` is the type of the first argument

result_type

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Result std::binary_function< _Arg1, _Arg2, _Result >::result_type
```

`result_type` is the return type

second_argument_type



```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result >::second_argument_type
```

`second_argument_type` is the type of the second argument

6.266.1 Detailed Description

template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
class __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >

Const point-type iterator.

6.266.2 Member Typedef Documentation

const_pointer

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::const_pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::const_pointer
```

Iterator's const pointer type.

const_reference

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::const_reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::const_reference
```

Iterator's const reference type.

difference_type

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef _Alloc::difference_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::difference_type
```

Difference type.

iterator_category

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef std::forward_iterator_tag __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::iterator_category
```
Category.

pointer

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,
Simple, _Alloc >::pointer
```
Iterator's pointer type.

reference

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,
Simple, _Alloc >::reference
```
Iterator's reference type.

value_type

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
typedef base_type::value_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,
Simple, _Alloc >::value_type
```
Iterator's value type.

6.272.1 Detailed Description

template<typename _IntType = int>
class std::binomial_distribution< _IntType >

A discrete binomial random number distribution.
The formula for the binomial probability density function is $p(i|t,p) = \binom{t}{i} p^i (1-p)^{t-i}$ where t and p are the parameters of the distribution.

Since

C++11

6.272.2 Member Typedef Documentation

result_type

```
template<typename _IntType = int>
typedef _IntType std::binomial_distribution< _IntType >::result_type
```

The type of the range of the distribution.

6.272.3 Member Function Documentation

max()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::max () const  [inline]
```

Returns the least upper bound value of the distribution.

min()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::min () const  [inline]
```

Returns the greatest lower bound value of the distribution.

operator()() [1/2]

```
template<typename _IntType = int>
template<typename _UniformRandomNumberGenerator>
result_type std::binomial_distribution< _IntType >::operator() (
            _UniformRandomNumberGenerator & __urng)  [inline]
```

Generating functions.
Referenced by operator()().

operator()() [2/2]

```
template<typename _IntType>
template<typename _UniformRandomNumberGenerator>
binomial_distribution< _IntType >::result_type std::binomial_distribution< _IntType >::operator()
(
            _UniformRandomNumberGenerator & __urng,
            const param_type & __param)
```

A rejection algorithm when t * p >= 8 and a simple waiting time method - the second in the referenced book - otherwise. NB: The former is available only if _GLIBCXX_USE_C99_MATH_FUNCS is defined.
Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).
References std::abs(), std::numeric_limits< _Tp >::epsilon(), std::log(), and std::numeric_limits< _Tp >::max().

p()

```
template<typename _IntType = int>
double std::binomial_distribution< _IntType >::p () const  [inline]
```

Returns the distribution p parameter.

param() [1/2]

```
template<typename _IntType = int>
param_type std::binomial_distribution< _IntType >::param () const  [inline]
```

Returns the parameter set of the distribution.

param() [2/2]

```
template<typename _IntType = int>
void std::binomial_distribution< _IntType >::param (
            const param_type & __param)  [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

reset()

```
template<typename _IntType = int>
void std::binomial_distribution< _IntType >::reset ()  [inline]
```

Resets the distribution state.

t()

```
template<typename _IntType = int>
_IntType std::binomial_distribution< _IntType >::t () const  [inline]
```

Returns the distribution t parameter.

6.272.4 Friends And Related Symbol Documentation

operator<<

```
template<typename _IntType = int>
template<typename _IntType1, typename _CharT, typename _Traits>
```

```
std::basic_ostream< _CharT, _Traits > & operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::binomial_distribution< _IntType1 > & __x)  [friend]
```

Inserts a binomial_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A binomial_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

operator==

```
template<typename _IntType = int>
bool operator== (
            const binomial_distribution< _IntType > & __d1,
            const binomial_distribution< _IntType > & __d2)  [friend]
```

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

operator>>

```
template<typename _IntType = int>
template<typename _IntType1, typename _CharT, typename _Traits>
std::basic_istream< _CharT, _Traits > & operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::binomial_distribution< _IntType1 > & __x)  [friend]
```

Extracts a binomial_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A binomial_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

6.276.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::bitmap_allocator< _Tp >

Bitmap Allocator, primary template.

6.276.2 Member Function Documentation

_M_allocate_single_object()

```
template<typename _Tp>
pointer __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object ()  [inline]
```

Allocates memory for a single object of size sizeof(_Tp).

Exceptions

std::bad_alloc.	If memory cannot be allocated.

Complexity: Worst case complexity is O(N), but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of O(1)! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

_M_deallocate_single_object()

```
template<typename _Tp>
void __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object (
            pointer __p) throw ( )   [inline]
```

Deallocates memory that belongs to a single object of size sizeof(_Tp).
Complexity: O(lg(N)), but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in O(1) time by the deallocate function.
The documentation for this class was generated from the following file:

- bitmap_allocator.h

6.278.1 Detailed Description

template<**size_t _Nb**>
class std::bitset< **_Nb** >

The bitset class represents a *fixed-size* sequence of bits.
(Note that bitset does *not* meet the formal requirements of a `container`. Mainly, it lacks iterators.)
The template argument, `Nb`, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024*1024").
In the general unoptimized case, storage is allocated in word-sized blocks. Let B be the number of bits in a word, then (Nb+(B-1))/B words will be used for storage. B - NbB bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.
If you think of bitset as *a simple array of bits*, be aware that your mental picture is reversed: a bitset behaves the same way as bits in integers do, with the bit at index 0 in the *least significant / right-hand* position, and the bit at index Nb-1 in the *most significant / left-hand* position. Thus, unlike other containers, a bitset's index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a') is 0001100001* on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>

using namespace std;

int main()
{
    long         a = 'a';
    bitset<10>   b(a);

    cout « "b('a') is " « b « endl;

    ostringstream s;
    s « b;
    string  str = s.str();
    cout « "index 3 in the string is " « str[3] « " but\n"
         « "index 3 in the bitset is " « b[3] « endl;
}
```

Also see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_containers.html for a description of extensions.

Most of the actual code isn't contained in bitset<> itself, but in the base class _Base_bitset. The base class works with whole words, not with individual bits. This allows us to specialize _Base_bitset for the important special case where the bitset is only a single word.

Extra confusion can result due to the fact that the storage for _Base_bitset *is* a regular array, and is indexed as such. This is carefully encapsulated.

6.278.2 Constructor & Destructor Documentation

bitset() [1/5]

```
template<size_t _Nb>
std::bitset< _Nb >::bitset ()  [inline], [constexpr], [noexcept]
```

All bits set to zero.

Referenced by operator&=(), operator<<(), operator<<=(), operator==(), operator>>(), operator^=(), operator|=(), and operator~().

bitset() [2/5]

```
template<size_t _Nb>
std::bitset< _Nb >::bitset (
            unsigned long long __val)  [inline], [constexpr], [noexcept]
```

Initial bits bitwise-copied from a single word (others set to zero).

bitset() [3/5]

```
template<size_t _Nb>
template<class _CharT, class _Traits, class _Alloc>
std::bitset< _Nb >::bitset (
            const std::basic_string< _CharT, _Traits, _Alloc > & __s,
            size_t __position = 0)  [inline], [explicit], [constexpr]
```

Use a subset of a string.

Parameters

__s	A string of 0 and 1 characters.
__position	Index of the first character in __s to use; defaults to zero.

Exceptions

std::out_of_range	If __position > __s.size().
std::invalid_argument	If a character appears in the string which is neither 0 nor 1.

References std::basic_string< _CharT, _Traits, _Alloc >::npos.

bitset() [4/5]

```
template<size_t _Nb>
template<class _CharT, class _Traits, class _Alloc>
std::bitset< _Nb >::bitset (
            const std::basic_string< _CharT, _Traits, _Alloc > & __s,
            size_t __position,
            size_t __n)  [inline], [constexpr]
```

Use a subset of a string.

Parameters

__s	A string of 0 and 1 characters.
__position	Index of the first character in __s to use.
__n	The number of characters to copy.

Exceptions

std::out_of_range	If __position > __s.size().
std::invalid_argument	If a character appears in the string which is neither 0 nor 1.

bitset() [5/5]

```
template<size_t _Nb>
template<typename _CharT, typename = _Require<is_trivially_copyable<_CharT>, is_standard_↩
layout<_CharT>, is_trivially_default_constructible<_CharT>, __not_<is_array<_CharT>>>>>
std::bitset< _Nb >::bitset (
            const _CharT * __str,
            typename __bitset< _Nb >::__string< _CharT >::size_type __n = __bitset< _Nb >::__↩
string<_CharT>::npos,
            _CharT __zero = _CharT('0'),
            _CharT __one = _CharT('1'))  [inline], [explicit], [constexpr]
```

Construct from a character array.

Parameters

__str	An array of characters __zero and __one.
__n	The number of characters to use.

__zero	The character corresponding to the value 0.
__one	The character corresponding to the value 1.

Exceptions

std::invalid_argument	If a character appears in the string which is neither __zero nor __one.

References std::basic_string< _CharT >::npos.

6.278.3 Member Function Documentation

all()

```
template<size_t _Nb>
bool std::bitset< _Nb >::all () const  [inline], [constexpr], [noexcept]
```

Tests whether all the bits are on.

Returns

True if all the bits are set.

any()

```
template<size_t _Nb>
bool std::bitset< _Nb >::any () const  [inline], [constexpr], [noexcept]
```

Tests whether any of the bits are on.

Returns

True if at least one bit is set.

count()

```
template<size_t _Nb>
size_t std::bitset< _Nb >::count () const  [inline], [constexpr], [noexcept]
```

Returns the number of bits which are set.

flip() [1/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::flip ()  [inline], [constexpr], [noexcept]
```

Toggles every bit to its opposite value.

flip() [2/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::flip (
            size_t __position)  [inline], [constexpr]
```

Toggles a given bit to its opposite value.

Parameters

__position	The index of the bit.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

References _Unchecked_flip().

none()

```
template<size_t _Nb>
bool std::bitset< _Nb >::none () const  [inline], [constexpr], [noexcept]
```

Tests whether any of the bits are on.

Returns

True if none of the bits are set.

operator&=()

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::operator&= (
            const bitset< _Nb > & __rhs)  [inline], [constexpr], [noexcept]
```

Operations on bitsets.

Parameters

__rhs	A same-sized bitset.

These should be self-explanatory.
References bitset().

operator<<()

```
template<size_t _Nb>
bitset< _Nb > std::bitset< _Nb >::operator<< (
            size_t __position) const  [inline], [constexpr], [noexcept]
```

Self-explanatory.
References bitset().

operator<<=()

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::operator<<= (
            size_t __position)  [inline], [constexpr], [noexcept]
```

Operations on bitsets.

Parameters

__position	The number of places to shift.

These should be self-explanatory.
References bitset(), and operator<<=().
Referenced by operator<<=().

operator==()

```
template<size_t _Nb>
bool std::bitset< _Nb >::operator== (
            const bitset< _Nb > & __rhs) const  [inline], [constexpr], [noexcept]
```

These comparisons for equality/inequality are, well, *bitwise*.
References bitset().

operator>>()

```
template<size_t _Nb>
bitset< _Nb > std::bitset< _Nb >::operator>> (
            size_t __position) const  [inline], [constexpr], [noexcept]
```

Self-explanatory.
References bitset().

operator>>=()

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::operator>>= (
            size_t __position)  [inline], [constexpr], [noexcept]
```

Operations on bitsets.

Parameters

__position	The number of places to shift.

These should be self-explanatory.

operator[]() [1/2]

```
template<size_t _Nb>
reference std::bitset< _Nb >::operator[] (
            size_t __position)  [inline], [constexpr]
```

Array-indexing support.

Parameters

__position	Index into the bitset.

Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

_GLIBCXX_RESOLVE_LIB_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

operator[]() [2/2]

```
template<size_t _Nb>
bool std::bitset< _Nb >::operator[] (
            size_t __position) const  [inline], [constexpr]
```

Array-indexing support.

Parameters

__position	Index into the bitset.

Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

_GLIBCXX_RESOLVE_LIB_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme
References _Unchecked_test().

operator^=()

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::operator^= (
            const bitset< _Nb > & __rhs)  [inline], [constexpr], [noexcept]
```

Operations on bitsets.

Parameters

__rhs	A same-sized bitset.

These should be self-explanatory.
References bitset().

operator"|=()

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::operator|= (
            const bitset< _Nb > & __rhs)  [inline], [constexpr], [noexcept]
```

Operations on bitsets.

Parameters

__rhs	A same-sized bitset.

These should be self-explanatory.
References bitset().

operator~()

```
template<size_t _Nb>
bitset< _Nb > std::bitset< _Nb >::operator~ () const  [inline], [constexpr], [noexcept]
```

See the no-argument flip().
References bitset().

reset() [1/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::reset ()  [inline], [constexpr], [noexcept]
```

Sets every bit to false.

reset() [2/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::reset (
            size_t __position)  [inline], [constexpr]
```

Sets a given bit to false.

Parameters

__position	The index of the bit.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Same as writing `set(pos,false)`.
References _Unchecked_reset().

set() [1/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::set ()  [inline], [constexpr], [noexcept]
```

Sets every bit to true.

set() [2/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::set (
            size_t __position,
            bool __val = true)  [inline], [constexpr]
```

Sets a given bit to a particular value.

Parameters

__position	The index of the bit.
__val	Either true or false, defaults to true.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

References _Unchecked_set().

size()

```
template<size_t _Nb>
size_t std::bitset< _Nb >::size () const  [inline], [constexpr], [noexcept]
```

Returns the total number of bits.

test()

```
template<size_t _Nb>
bool std::bitset< _Nb >::test (
            size_t __position) const  [inline], [constexpr]
```

Tests the value of a bit.

Parameters

__position	The index of a bit.

Returns

The value at *pos*.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

References _Unchecked_test().

to_string()

```
template<size_t _Nb>
template<class _CharT, class _Traits, class _Alloc>
std::basic_string< _CharT, _Traits, _Alloc > std::bitset< _Nb >::to_string () const  [inline],
[constexpr]
```

Returns a character interpretation of the bitset.

Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

to_ulong()

```
template<size_t _Nb>
unsigned long std::bitset< _Nb >::to_ulong () const  [inline], [constexpr]
```

Returns a numerical interpretation of the bitset.

Returns

The integral equivalent of the bits.

Exceptions

std::overflow_error	If there are too many bits to be represented in an `unsigned long`.

The documentation for this class was generated from the following file:

- bitset

6.279.1 Detailed Description

bool_set
See N2136, Bool_set: multi-valued logic by Hervé Brönnimann, Guillaume Melquiond, Sylvain Pion.
The implicit conversion to bool is slippery! I may use the new explicit conversion. This has been specialized in the language so that in contexts requiring a bool the conversion happens implicitly. Thus most objections should be eliminated.

6.279.2 Constructor & Destructor Documentation

bool_set() [1/2]

```
std::tr2::bool_set::bool_set ()  [inline], [constexpr]
```

Default constructor.
Referenced by equals().

bool_set() [2/2]

```
std::tr2::bool_set::bool_set (
            bool __t)  [inline], [constexpr]
```

Constructor from bool.

6.279.3 Member Function Documentation

equals()

```
bool std::tr2::bool_set::equals (
            bool_set __b) const  [inline]
```

Return true if states are equal.
References bool_set().

is_emptyset()

```
bool std::tr2::bool_set::is_emptyset () const  [inline]
```

Return true if this is empty.

is_indeterminate()

```
bool std::tr2::bool_set::is_indeterminate () const  [inline]
```

Return true if this is indeterminate.

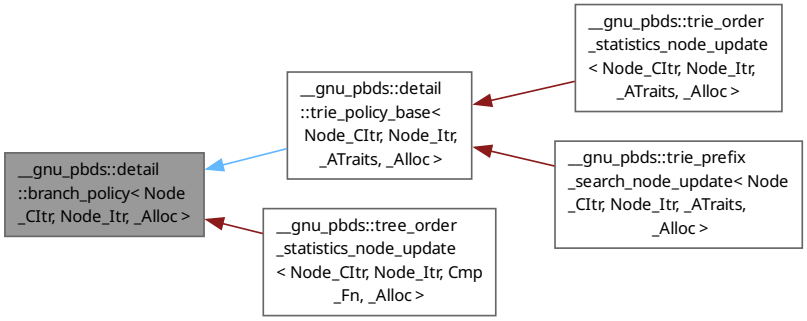
is_singleton()

```
bool std::tr2::bool_set::is_singleton () const  [inline]
```

Return true if this is false or true (normal boolean).
Referenced by operator bool().

operator bool()

```
std::tr2::bool_set::operator bool () const  [inline]
```



Conversion to bool.
References is_singleton().
The documentation for this class was generated from the following files:

- bool_set
- bool_set.tcc

6.282.1 Detailed Description

template<typename _RealType = double>
class std::cauchy_distribution< _RealType >

A cauchy_distribution random number distribution.
The formula for the normal probability mass function is $p(x|a,b) = (\pi b(1+(\frac{x-a}{b})^2))^{-1}$

Since

C++11

6.282.2 Member Typedef Documentation

result_type

```
template<typename _RealType = double>
typedef _RealType std::cauchy_distribution< _RealType >::result_type
```

The type of the range of the distribution.

6.282.3 Member Function Documentation

max()

```
template<typename _RealType = double>
result_type std::cauchy_distribution< _RealType >::max () const  [inline]
```

Returns the least upper bound value of the distribution.

min()

```
template<typename _RealType = double>
result_type std::cauchy_distribution< _RealType >::min () const  [inline]
```

Returns the greatest lower bound value of the distribution.

operator()()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator>
result_type std::cauchy_distribution< _RealType >::operator() (
            _UniformRandomNumberGenerator & __urng)  [inline]
```

Generating functions.
Referenced by operator()().

param() [1/2]

```
template<typename _RealType = double>
param_type std::cauchy_distribution< _RealType >::param () const  [inline]
```

Returns the parameter set of the distribution.
Referenced by std::operator>>().

param() [2/2]

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::param (
            const param_type & __param)  [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

reset()

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::reset ()  [inline]
```

Resets the distribution state.

6.282.4 Friends And Related Symbol Documentation

operator==

```
template<typename _RealType = double>
bool operator== (
            const cauchy_distribution< _RealType > & __d1,
            const cauchy_distribution< _RealType > & __d2)  [friend]
```

Return true if two Cauchy distributions have the same parameters.
The documentation for this class was generated from the following files:

- random.h
- bits/random.tcc

6.283 __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type > Class Template Reference

- void notify_resized (size_type new_size)

6.283.1 Detailed Description

template<bool External_Load_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.

6.283.2 Member Enumeration Documentation

anonymous enum

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
anonymous enum
```

Enumerator

external_load_access	Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

6.283.3 Constructor & Destructor Documentation

cc_hash_max_collision_check_resize_trigger()

```
template<bool External_Load_Access, typename Size_Type>
__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::cc_↩
hash_max_collision_check_resize_trigger (
            float load = 0.5)
```

Default constructor, or constructor taking load, a __load factor which it will attempt to maintain.

6.283.4 Member Function Documentation

get_load()

```
template<bool External_Load_Access, typename Size_Type>
float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::get_load () const  [inline]
```

Returns the current load.

is_grow_needed()

```
template<bool External_Load_Access, typename Size_Type>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::is_grow_needed (
            size_type size,
            size_type num_entries) const  [inline], [protected]
```

Queries whether a grow is needed. This method is called only if this object indicated is needed.

is_resize_needed()

```
template<bool External_Load_Access, typename Size_Type>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::is_resize_needed () const  [inline], [protected]
```

Queries whether a resize is needed.

notify_cleared()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_cleared ()  [protected]
```

Notifies the table was cleared.
References notify_resized().

notify_erase_search_collision()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_erase_search_collision ()  [inline], [protected]
```

Notifies a search encountered a collision.

notify_erase_search_end()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_erase_search_end ()  [inline], [protected]
```

Notifies a search ended.

notify_erase_search_start()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_erase_search_start ()  [inline], [protected]
```

Notifies an erase search started.

notify_erased()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_erased (
            size_type num_entries)  [inline], [protected]
```

Notifies an element was erased.

notify_externally_resized()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_externally_resized (
            size_type new_size)  [protected]
```

Notifies the table was resized externally.

notify_find_search_collision()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_find_search_collision ()  [inline], [protected]
```

Notifies a search encountered a collision.

notify_find_search_end()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_find_search_end ()  [inline], [protected]
```

Notifies a search ended.

notify_find_search_start()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_find_search_start ()  [inline], [protected]
```

Notifies a find search started.

notify_insert_search_collision()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_insert_search_collision ()  [inline], [protected]
```

Notifies a search encountered a collision.

notify_insert_search_end()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_insert_search_end ()  [inline], [protected]
```

Notifies a search ended.

notify_insert_search_start()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_insert_search_start ()  [inline], [protected]
```

Notifies an insert search started.

notify_inserted()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_inserted (
            size_type num_entries)  [inline], [protected]
```

Notifies an element was inserted.

notify_resized()

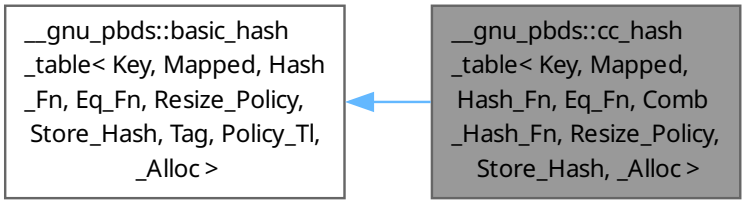
```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::notify_resized (
            size_type new_size)  [protected]
```

Notifies the table was resized as a result of this object's signifying that a resize is needed.
Referenced by notify_cleared().

set_load()

```
template<bool External_Load_Access, typename Size_Type>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type
>::set_load (
            float load)
```

Sets the load; does not resize the container.
The documentation for this class was generated from the following file:



- hash_policy.hpp

6.284.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> class __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >

A collision-chaining hash-based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Comb_Hash_Fn	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.)
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
_Alloc	Allocator type.

Base tag choices are: cc_hash_tag.
Base is basic_hash_table.

6.284.2 Constructor & Destructor Documentation

cc_hash_table() [1/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<↩
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash↩
_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_↩
resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc

_Alloc >::cc_hash_table (
            const hash_fn & h,
            const eq_fn & e)  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.

cc_hash_table() [4/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<↩
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash↩
_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_↩
resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc
= std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            const hash_fn & h,
            const eq_fn & e,
            const comb_hash_fn & ch)  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, and r_comb_hash_fn will be copied by the comb_hash_fn object of the container object.

cc_hash_table() [5/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<↩
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash↩
_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_↩
resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc
= std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            const hash_fn & h,
            const eq_fn & e,
            const comb_hash_fn & ch,
            const resize_policy & rp)  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_hash_fn will be copied by the comb_hash_fn object of the container object, and r_resize_policy will be copied by the resize_policy object of the container object.

cc_hash_table() [6/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<↩
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash↩
_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_↩
resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc
= std::allocator<char>>
template<typename It>
```

```
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            It first,
            It last)  [inline]
```

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

cc_hash_table() [7/10]

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<↩
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash↩
_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_↩

6.286.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >

A collision-chaining hash-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor. Default is __gnu_cxx::hash.
Eq_Fn	Equal functor. Default std::equal_to<Key>
_Alloc	Allocator type.
Store_Hash	If key type stores extra metadata. Defaults to false.
Comb_Hash_Fn	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) Default direct_mask_range_hashing.
Resize_Policy	Resizes hash. Defaults to hash_standard_resize_policy, using hash_exponential_size_policy and hash_load_check_resize_trigger.

Bases are: detail::hash_eq_fn, Resize_Policy, detail::ranged_hash_fn, detail::types_traits. (Optional: detail::debug_↩ map_base.)

6.286.2 Member Enumeration Documentation

anonymous enum

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
anonymous enum
```

Value stores hash, true or false.

6.286.3 Member Function Documentation

empty()

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_↩
Fn, Resize_Policy >::empty () const  [inline], [nodiscard]
```

True if size() == 0.

get_comb_hash_fn() [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ()
```

Return current comb_hash_fn.

get_comb_hash_fn() [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_↩
Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn () const
```

Return current const comb_hash_fn.

get_eq_fn() [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_↩
Hash_Fn, Resize_Policy >::get_eq_fn ()
```

Return current eq_fn.

get_eq_fn() [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_eq_fn () const
```

Return current const eq_fn.

get_hash_fn() [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_↩
Hash_Fn, Resize_Policy >::get_hash_fn ()
```

Return current hash_fn.

get_hash_fn() [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_hash_fn () const
```

Return current const hash_fn.

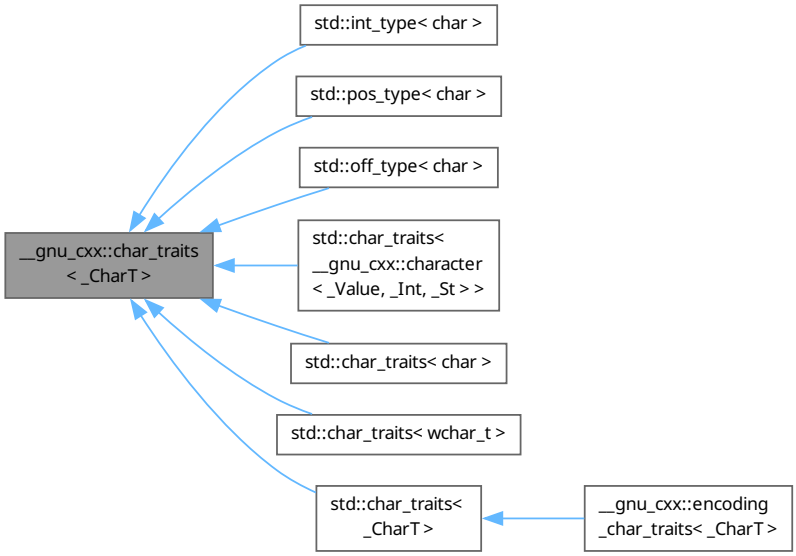
get_resize_policy() [1/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_resize_policy ()
```

Return current resize_policy.

get_resize_policy() [2/2]

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
const Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_↩
Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy () const
```



Return current const resize_policy.

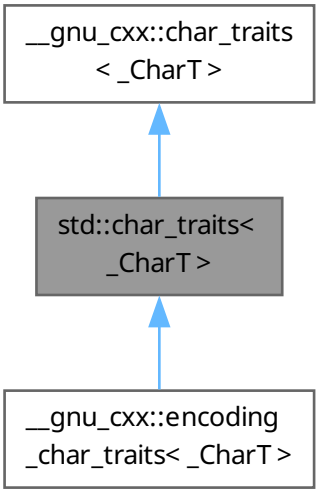
6.287.1 Detailed Description

template<typename _CharT>
struct __gnu_cxx::char_traits< _CharT >

Base class used to implement std::char_traits.

Note



For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the int_type and state_type typedefs, and the eof() member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace std may not be specialized for fundamental types, but classes in namespace __gnu_cxx may be.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod_char_traits.h.
The documentation for this struct was generated from the following file:

- char_traits.h

6.288 std::char_traits< _CharT > Struct Template Reference

- static constexpr char_type **to_char_type** (const int_type &__c)
- static constexpr int_type **to_int_type** (const char_type &__c)

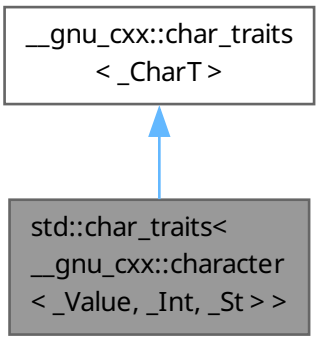
6.288.1 Detailed Description

template<**typename _CharT**>
struct std::char_traits< **_CharT** >

Basis for explicit traits specializations.

Note

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around __gnu_cxx::char_traits, it is possible to achieve a more appropriate definition by specializing __gnu_cxx::char_traits.



See https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod_char_traits.h.

6.293.1 Detailed Description

template<typename _RealType = double>
class std::chi_squared_distribution< _RealType >

A chi_squared_distribution random number distribution.
The formula for the normal probability mass function is $p(x|n) = \frac{x^{(n/2)-1}e^{-x/2}}{\Gamma(n/2)2^{n/2}}$

Since

C++11

6.293.2 Member Typedef Documentation

result_type

```
template<typename _RealType = double>
typedef _RealType std::chi_squared_distribution< _RealType >::result_type
```

The type of the range of the distribution.

6.293.3 Member Function Documentation

max()

```
template<typename _RealType = double>
result_type std::chi_squared_distribution< _RealType >::max () const  [inline]
```

Returns the least upper bound value of the distribution.

min()

```
template<typename _RealType = double>
result_type std::chi_squared_distribution< _RealType >::min () const  [inline]
```

Returns the greatest lower bound value of the distribution.

operator()()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator>
result_type std::chi_squared_distribution< _RealType >::operator() (
            _UniformRandomNumberGenerator & __urng)  [inline]
```

Generating functions.

param() [1/2]

```
template<typename _RealType = double>
param_type std::chi_squared_distribution< _RealType >::param () const  [inline]
```

Returns the parameter set of the distribution.

param() [2/2]

```
template<typename _RealType = double>
void std::chi_squared_distribution< _RealType >::param (
            const param_type & __param)  [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

reset()

```
template<typename _RealType = double>
void std::chi_squared_distribution< _RealType >::reset ()  [inline]
```

Resets the distribution state.

6.293.4 Friends And Related Symbol Documentation

operator<<

```
template<typename _RealType = double>
template<typename _RealType1, typename _CharT, typename _Traits>
std::basic_ostream< _CharT, _Traits > & operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::chi_squared_distribution< _RealType1 > & __x)  [friend]
```

Inserts a chi_squared_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A chi_squared_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

operator==

```
template<typename _RealType = double>
bool operator== (
            const chi_squared_distribution< _RealType > & __d1,
            const chi_squared_distribution< _RealType > & __d2)  [friend]
```

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

operator>>

```
template<typename _RealType = double>
template<typename _RealType1, typename _CharT, typename _Traits>
std::basic_istream< _CharT, _Traits > & operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::chi_squared_distribution< _RealType1 > & __x)  [friend]
```

Extracts a chi_squared_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A chi_squared_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

6.294.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT>
class std::codecvt< _InternT, _ExternT, _StateT >

Primary class template codecvt.
NB: Generic, mostly useless implementation.

6.294.2 Member Function Documentation

do_always_noconv()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual bool std::codecvt< _InternT, _ExternT, _StateT >::do_always_noconv () const throw ( )
[protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

do_encoding()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual int std::codecvt< _InternT, _ExternT, _StateT >::do_encoding () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

do_in()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_in (
            state_type & __state,
            const extern_type * __from,
            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
            intern_type * __to_end,
            intern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

do_length()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual int std::codecvt< _InternT, _ExternT, _StateT >::do_length (
            state_type & ,
            const extern_type * __from,
            const extern_type * __end,
            size_t __max) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

do_max_length()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual int std::codecvt< _InternT, _ExternT, _StateT >::do_max_length () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

do_out()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

do_unshift()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

in()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (
            state_type & __state,
            const extern_type * __from,
            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
            intern_type * __to_end,
            intern_type *& __to_next) const  [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out()

```
template<typename _InternT, typename _ExternT, typename _StateT>
```

```
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

References do_out().

unshift()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

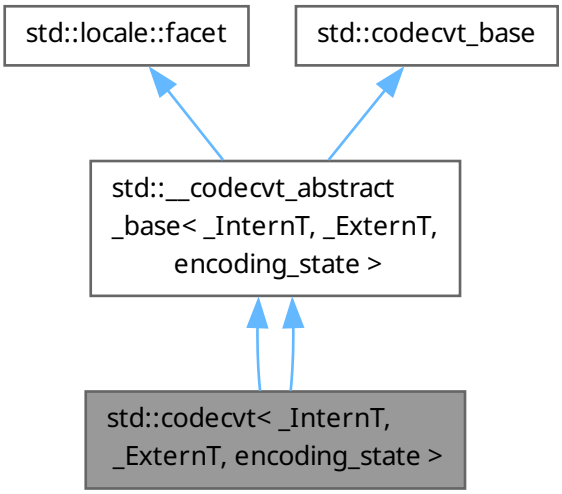
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt↩ _base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns



codecvt_base::result.

6.295.1 Detailed Description

template<typename _InternT, typename _ExternT>
class std::codecvt< _InternT, _ExternT, encoding_state >

codecvt<InternT, _ExternT, encoding_state> specialization.

6.295.2 Member Function Documentation

do_always_noconv()

```
template<typename _InternT, typename _ExternT>
bool std::codecvt< _InternT, _ExternT, encoding_state >::do_always_noconv () const throw ( )
[protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

do_encoding()

```
template<typename _InternT, typename _ExternT>
int std::codecvt< _InternT, _ExternT, encoding_state >::do_encoding () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

do_in()

```
template<typename _InternT, typename _ExternT>
codecvt_base::result std::codecvt< _InternT, _ExternT, encoding_state >::do_in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

do_length()

```
template<typename _InternT, typename _ExternT>
int std::codecvt< _InternT, _ExternT, encoding_state >::do_length (
             state_type & ,
             const extern_type * __from,
             const extern_type * __end,
             size_t __max) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

do_max_length()

```
template<typename _InternT, typename _ExternT>
int std::codecvt< _InternT, _ExternT, encoding_state >::do_max_length () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

do_out()

```
template<typename _InternT, typename _ExternT>
codecvt_base::result std::codecvt< _InternT, _ExternT, encoding_state >::do_out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

do_unshift()

```
template<typename _InternT, typename _ExternT>
codecvt_base::result std::codecvt< _InternT, _ExternT, encoding_state >::do_unshift (
             state_type & __state,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

in() [1/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

in() [2/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [inline]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.

__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [1/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [2/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [1/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [2/2]

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
            intern_type * __to_end,
            intern_type *& __to_next) const  [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

in() [2/2]

```
result std::__codecvt_abstract_base< char, char, mbstate_t >::in (
            state_type & __state,
            const extern_type * __from,
            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
```

```
            intern_type * __to_end,
            intern_type *& __to_next) const  [inline]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [1/2]

```
result std::__codecvt_abstract_base< char, char, mbstate_t >::out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the

output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [2/2]

```
result std::__codecvt_abstract_base< char, char, mbstate_t >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [inline]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.

__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [1/2]

```
result std::__codecvt_abstract_base< char, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [2/2]

```
result std::__codecvt_abstract_base< char, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

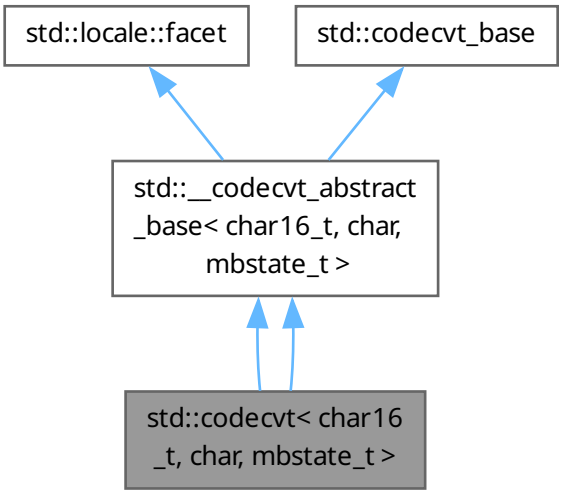
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns



codecvt_base::result.

6.297.1 Detailed Description

Class codecvt<char16_t, char, mbstate_t> specialization.
Converts between UTF-16 and UTF-8.

6.297.2 Member Function Documentation

do_always_noconv()

```
virtual bool std::codecvt< char16_t, char, mbstate_t >::do_always_noconv () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< char16_t, char, mbstate_t >.

do_encoding()

```
virtual int std::codecvt< char16_t, char, mbstate_t >::do_encoding () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< char16_t, char, mbstate_t >.

do_in()

```
virtual result std::codecvt< char16_t, char, mbstate_t >::do_in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< char16_t, char, mbstate_t >.

do_length()

```
virtual int std::codecvt< char16_t, char, mbstate_t >::do_length (
             state_type & ,
             const extern_type * __from,
             const extern_type * __end,
             size_t __max) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< char16_t, char, mbstate_t >.

do_max_length()

```
virtual int std::codecvt< char16_t, char, mbstate_t >::do_max_length () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< char16_t, char, mbstate_t >.

do_out()

```
virtual result std::codecvt< char16_t, char, mbstate_t >::do_out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [protected], [virtual]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements std::__codecvt_abstract_base< char16_t, char, mbstate_t >.

do_unshift()

```
virtual result std::codecvt< char16_t, char, mbstate_t >::do_unshift (
             state_type & __state,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< char16_t, char, mbstate_t >.

in() [1/2]

```
result std::__codecvt_abstract_base< char16_t, char, mbstate_t >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [inline], [inherited]
```

Convert from external to internal character set.
Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.

__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

in() [2/2]

```
result std::__codecvt_abstract_base< char16_t, char, mbstate_t >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [inline]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [1/2]

```
result std::__codecvt_abstract_base< char16_t, char, mbstate_t >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [2/2]

```
result std::__codecvt_abstract_base< char16_t, char, mbstate_t >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
```

```
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [1/2]

```
result std::__codecvt_abstract_base< char16_t, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [2/2]

```
result std::__codecvt_abstract_base< char16_t, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

6.298.1 Detailed Description

Class codecvt<char32_t, char, mbstate_t> specialization.
Converts between UTF-32 and UTF-8.

6.298.2 Member Function Documentation

do_always_noconv()

```
virtual bool std::codecvt< char32_t, char, mbstate_t >::do_always_noconv () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< char32_t, char, mbstate_t >.

do_encoding()

```
virtual int std::codecvt< char32_t, char, mbstate_t >::do_encoding () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< char32_t, char, mbstate_t >.

do_in()

```
virtual result std::codecvt< char32_t, char, mbstate_t >::do_in (
            state_type & __state,
            const extern_type * __from,
            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
            intern_type * __to_end,
            intern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< char32_t, char, mbstate_t >.

do_length()

```
virtual int std::codecvt< char32_t, char, mbstate_t >::do_length (
            state_type & ,
            const extern_type * __from,
            const extern_type * __end,
            size_t __max) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< char32_t, char, mbstate_t >.

do_max_length()

```
virtual int std::codecvt< char32_t, char, mbstate_t >::do_max_length () const throw ( )   [protected],
[virtual]
```

Implements std::__codecvt_abstract_base< char32_t, char, mbstate_t >.

do_out()

```
virtual result std::codecvt< char32_t, char, mbstate_t >::do_out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements std::__codecvt_abstract_base< char32_t, char, mbstate_t >.

do_unshift()

```
virtual result std::codecvt< char32_t, char, mbstate_t >::do_unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [protected], [virtual]
```

Implements std::__codecvt_abstract_base< char32_t, char, mbstate_t >.

in() [1/2]

```
result std::__codecvt_abstract_base< char32_t, char, mbstate_t >::in (
            state_type & __state,
            const extern_type * __from,
            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
            intern_type * __to_end,
            intern_type *& __to_next) const  [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

in() [2/2]

```
result std::__codecvt_abstract_base< char32_t, char, mbstate_t >::in (
            state_type & __state,
            const extern_type * __from,
            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
            intern_type * __to_end,
            intern_type *& __to_next) const  [inline]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [1/2]

```
result std::__codecvt_abstract_base< char32_t, char, mbstate_t >::out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [2/2]

```
result std::__codecvt_abstract_base< char32_t, char, mbstate_t >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [inline]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [1/2]

```
result std::__codecvt_abstract_base< char32_t, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [2/2]

```
result std::__codecvt_abstract_base< char32_t, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

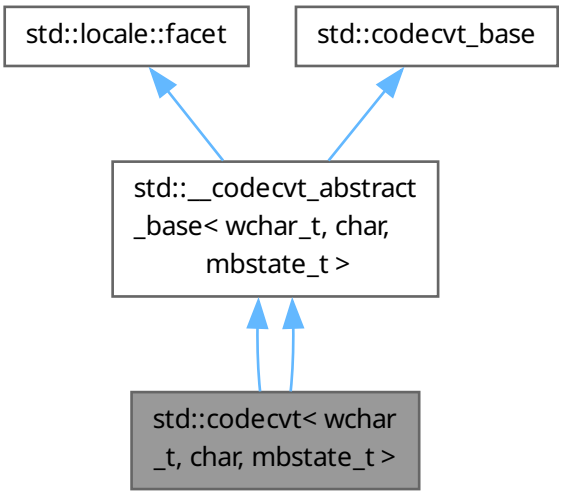
The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns



codecvt_base::result.

             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [inline], [inherited]
```

Convert from external to internal character set.
Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.

__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

in() [2/2]

```
result std::__codecvt_abstract_base< wchar_t, char, mbstate_t >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next) const  [inline]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [1/2]

```
result std::__codecvt_abstract_base< wchar_t, char, mbstate_t >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out() [2/2]

```
result std::__codecvt_abstract_base< wchar_t, char, mbstate_t >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
```

```
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [1/2]

```
result std::__codecvt_abstract_base< wchar_t, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

unshift() [2/2]

```
result std::__codecvt_abstract_base< wchar_t, char, mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [protected], [virtual], [inherited]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

do_unshift()

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_unshift (
            state_type & __state,
            extern_type * __to,
```

```
            extern_type * __to_end,
            extern_type *& __to_next) const  [protected], [virtual], [inherited]
```

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

in()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (
            state_type & __state,
            const extern_type * __from,
            const extern_type * __from_end,
            const extern_type *& __from_next,
            intern_type * __to,
            intern_type * __to_end,
            intern_type *& __to_next) const  [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
            state_type & __state,
            const intern_type * __from,
            const intern_type * __from_end,
            const intern_type *& __from_next,
```

```
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

References do_out().

unshift()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next) const  [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

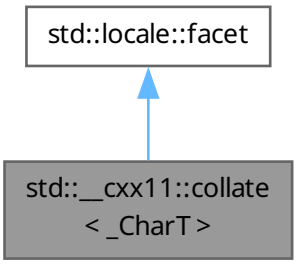
The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns



codecvt_base::result.

6.302.1 Detailed Description

template<typename _CharT>
class std::__cxx11::collate< _CharT >

Facet for localized string comparison.
This facet encapsulates the code to compare strings in a localized manner.
The collate template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the collate facet.

6.302.2 Member Typedef Documentation

char_type

```
template<typename _CharT>
typedef _CharT std::__cxx11::collate< _CharT >::char_type
```

Public typedefs.

string_type

```
template<typename _CharT>
typedef basic_string<_CharT> std::__cxx11::collate< _CharT >::string_type
```

Public typedefs.

6.302.3 Constructor & Destructor Documentation

collate() [1/2]

```
template<typename _CharT>
std::__cxx11::collate< _CharT >::collate (
            size_t __refs = 0)  [inline], [explicit]
```

Constructor performs initialization.
This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

References std::locale::facet::facet().
Referenced by do_compare(), do_hash(), and do_transform().

collate() [2/2]

```
template<typename _CharT>
std::__cxx11::collate< _CharT >::collate (
            __c_locale __cloc,
            size_t __refs = 0)  [inline], [explicit]
```

Internal constructor. Not for general use.
This is a constructor for use by the library itself to set up new locales.

Parameters

__cloc	The C locale.
__refs	Passed to the base facet class.

References std::locale::facet::facet().

~collate()

```
template<typename _CharT>
virtual std::__cxx11::collate< _CharT >::~collate ()  [inline], [protected], [virtual]
```

Destructor.

6.302.4 Member Function Documentation

compare()

```
template<typename _CharT>
int std::__cxx11::collate< _CharT >::compare (
            const _CharT * __lo1,
            const _CharT * __hi1,
            const _CharT * __lo2,
            const _CharT * __hi2) const  [inline]
```

Compare two strings.
This function compares two strings and returns the result by calling collate::do_compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

References do_compare().

do_compare()

```
template<typename _CharT>
int std::collate< _CharT >::do_compare (
            const _CharT * __lo1,
            const _CharT * __hi1,
            const _CharT * __lo2,
            const _CharT * __hi2) const  [protected], [virtual]
```

Compare two strings.
This function is a hook for derived classes to change the value returned.

See also

compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

References collate(), std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::length().
Referenced by compare().

do_hash()

```
template<typename _CharT>
long std::collate< _CharT >::do_hash (
            const _CharT * __lo,
            const _CharT * __hi) const  [protected], [virtual]
```

Return hash of a string.
This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

_↩ _lo	Start of string.
_↩ _hi	End of string.

Returns

Hash value.

References collate().
Referenced by hash().

do_transform()

```
template<typename _CharT>
collate< _CharT >::string_type std::collate< _CharT >::do_transform (
            const _CharT * __lo,
            const _CharT * __hi) const  [protected], [virtual]
```

Transform string to comparable form.
This function is a hook for derived classes to change the value returned.

Parameters

_↩ _lo	Start.
_↩ _hi	End.

Returns

transformed string.

References collate(), std::basic_string< _CharT, _Traits, _Alloc >::append(), std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::clear(), std::basic_string< _CharT, _Traits, _Alloc >::data(), std::basic_string< _CharT, _Tra and std::basic_string< _CharT, _Traits, _Alloc >::push_back().
Referenced by transform().

hash()

```
template<typename _CharT>
long std::__cxx11::collate< _CharT >::hash (
            const _CharT * __lo,
            const _CharT * __hi) const  [inline]
```

Return hash of a string.
This function computes and returns a hash on the input string. It does so by returning collate::do_hash().

Parameters

_↩ _lo	Start of string.
_↩ _hi	End of string.

Returns

Hash value.

References do_hash().

transform()

```
template<typename _CharT>
string_type std::__cxx11::collate< _CharT >::transform (
            const _CharT * __lo,
            const _CharT * __hi) const  [inline]
```

Transform string to comparable form.

This function is a wrapper for strxfrm functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning collate::do_transform().

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Transformed string_type.

References do_transform().

6.302.5 Member Data Documentation

id

```
template<typename _CharT>
locale::id std::__cxx11::collate< _CharT >::id  [static]
```

Numpunct facet id.

6.313.1 Detailed Description

template<typename _Tp>
class std::complex< _Tp >

Template to represent complex numbers.
Specializations for float, double, and long double are part of the library. Results with any other type are not guaranteed.

Parameters

Tp	Type of real and imaginary values.

6.313.2 Member Typedef Documentation

value_type

```
template<typename _Tp>
typedef _Tp std::complex< _Tp >::value_type
```

Value typedef.

6.313.3 Constructor & Destructor Documentation

complex()

```
template<typename _Tp>
std::complex< _Tp >::complex (
```

```
            const _Tp & __r = _Tp(),
            const _Tp & __i = _Tp())  [inline], [constexpr]
```

Default constructor. First parameter is x, second parameter is y. Unspecified parameters default to 0.
Referenced by operator*=(), operator*=(), operator+=(), operator-=(), operator/=(), operator/=(), operator=(), and operator=().

6.313.4 Member Function Documentation

explicit()

```
template<typename _Tp>
template<typename _Up>
std::complex< _Tp >::explicit (
            !requires(_Up __u) { _Tp{__u};} ) const &  [inline]
```

Converting constructor.

operator*=() [1/2]

```
template<typename _Tp>
complex< _Tp > & std::complex< _Tp >::operator*= (
            const _Tp & )  [constexpr]
```

Multiply this complex number by a scalar.
References complex().

operator*=() [2/2]

```
template<typename _Tp>
template<typename _Up>
complex< _Tp > & std::complex< _Tp >::operator*= (
            const complex< _Up > & )  [constexpr]
```

Multiply this complex number by another.
References complex().

operator+=() [1/2]

```
template<typename _Tp>
complex< _Tp > & std::complex< _Tp >::operator+= (
            const _Tp & __t)  [inline], [constexpr]
```

Add a scalar to this complex number.

operator+=() [2/2]

```
template<typename _Tp>
template<typename _Up>
complex< _Tp > & std::complex< _Tp >::operator+= (
            const complex< _Up > & )  [constexpr]
```

Add another complex number to this one.
References complex().

operator-=() [1/2]

```
template<typename _Tp>
complex< _Tp > & std::complex< _Tp >::operator-= (
            const _Tp & __t)  [inline], [constexpr]
```

Subtract a scalar from this complex number.

operator-=() [2/2]

```
template<typename _Tp>
template<typename _Up>
complex< _Tp > & std::complex< _Tp >::operator-= (
            const complex< _Up > & )  [constexpr]
```

Subtract another complex number from this one.
References complex().

operator/=() [1/2]

```
template<typename _Tp>
complex< _Tp > & std::complex< _Tp >::operator/= (
            const _Tp & )  [constexpr]
```

Divide this complex number by a scalar.
References complex().

operator/=() [2/2]

```
template<typename _Tp>
template<typename _Up>
complex< _Tp > & std::complex< _Tp >::operator/= (
            const complex< _Up > & )  [constexpr]
```

Divide this complex number by another.
References complex().

operator=() [1/2]

```
template<typename _Tp>
complex< _Tp > & std::complex< _Tp >::operator= (
            const _Tp & )  [constexpr]
```

Assign a scalar to this complex number.
References complex().

operator=() [2/2]

```
template<typename _Tp>
template<typename _Up>
complex< _Tp > & std::complex< _Tp >::operator= (
            const complex< _Up > & )  [constexpr]
```

Assign another complex number to this one.
References complex().

6.321.1 Detailed Description

condition_variable_any
The documentation for this class was generated from the following file:

- condition_variable

6.322 std::conditional< _Cond, _Iftrue, _Iffalse > Struct Template Reference

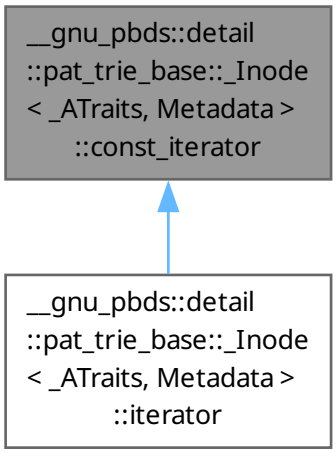
`#include <type_traits>`

Public Types

- using **type**

6.322.1 Detailed Description

template<bool _Cond, typename _Iftrue, typename _Iffalse>
struct std::conditional< _Cond, _Iftrue, _Iffalse >



Define a member typedef `type` to one of two argument types.
The documentation for this struct was generated from the following file:

- type_traits

6.323 __gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::const_iterator Struct Reference

`#include <pat_trie_base.hpp>`

Inheritance diagram for __gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::const_iterator:

Public Types

- typedef _Alloc::difference_type **difference_type**
- typedef std::forward_iterator_tag **iterator_category**
- typedef node_pointer_pointer **pointer**
- typedef node_pointer_reference **reference**
- typedef node_pointer **value_type**

Public Member Functions

- bool **operator!=** (const const_iterator &other) const
- node_const_pointer **operator*** () const
- const_iterator & **operator++** ()
- const_iterator **operator++** (int)
- const node_pointer_pointer **operator->** () const
- bool **operator==** (const const_iterator &other) const

Public Attributes

- node_pointer_pointer **m_p_p_cur**
- node_pointer_pointer **m_p_p_end**

6.323.1 Detailed Description

template<typename _ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::const_iterator

Constant child iterator.
The documentation for this struct was generated from the following file:

- pat_trie_base.hpp

6.324 std::chrono::tzdb_list::const_iterator Class Reference

`#include <chrono>`

Public Types

- using **difference_type**
- using **iterator_category**
- using **pointer**
- using **reference**
- using **value_type**

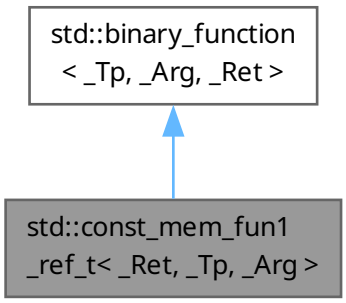
Public Member Functions

- **const_iterator** (const const_iterator &)=default
- **const_iterator** (const_iterator &&)=default
- reference **operator*** () const noexcept
- const_iterator & **operator++** ()
- const_iterator **operator++** (int)
- pointer **operator->** () const noexcept
- const_iterator & **operator=** (const const_iterator &)=default
- const_iterator & **operator=** (const_iterator &&)=default
- bool **operator==** (const const_iterator &) const noexcept=default

Friends

- class **tzdb_list**

6.324.1 Detailed Description



An iterator into the `tzdb_list`
As a extension, in libstdc++ each `tzdb` is reference-counted and the `const_iterator` type shares ownership of the object it refers to. This ensures that a `tzdb` erased from the list will not be destroyed while there is an iterator that refers to it.
The documentation for this class was generated from the following file:

- chrono

6.325 std::const_mem_fun1_ref_t< _Ret, _Tp, _Arg > Class Template Reference

`#include <stl_function.h>`

Inheritance diagram for std::const_mem_fun1_ref_t< _Ret, _Tp, _Arg >:

Public Types

- typedef _Tp first_argument_type
- typedef _Ret result_type
- typedef _Arg second_argument_type

Public Member Functions

- **const_mem_fun1_ref_t** (_Ret(_Tp::*__pf)(_Arg) const)
- _Ret **operator()** (const _Tp &__r, _Arg __x) const

6.325.1 Detailed Description

template<typename _Ret, typename _Tp, typename _Arg>
class std::const_mem_fun1_ref_t< _Ret, _Tp, _Arg >

One of the adaptors for member pointers.

6.325.2 Member Typedef Documentation

first_argument_type

```
typedef _Tp std::binary_function< _Tp, _Arg, _Ret >::first_argument_type  [inherited]
```

`first_argument_type` is the type of the first argument

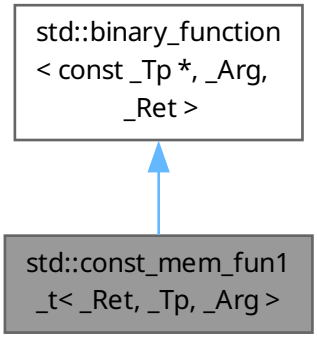
result_type

```
typedef _Ret std::binary_function< _Tp, _Arg, _Ret >::result_type  [inherited]
```

`result_type` is the return type

second_argument_type

```
typedef _Arg std::binary_function< _Tp, _Arg, _Ret >::second_argument_type  [inherited]
```



`second_argument_type` is the type of the second argument

The documentation for this class was generated from the following file:

- stl_function.h

6.326 std::const_mem_fun1_t< _Ret, _Tp, _Arg > Class Template Reference

`#include <stl_function.h>`
Inheritance diagram for std::const_mem_fun1_t< _Ret, _Tp, _Arg >:

Public Types

- typedef const _Tp * first_argument_type
- typedef _Ret result_type
- typedef _Arg second_argument_type

Public Member Functions

- **const_mem_fun1_t** (_Ret(_Tp::*__pf)(_Arg) const)
- _Ret **operator()** (const _Tp *__p, _Arg __x) const

6.326.1 Detailed Description

template<typename _Ret, typename _Tp, typename _Arg>
class std::const_mem_fun1_t< _Ret, _Tp, _Arg >

One of the adaptors for member pointers.

6.326.2 Member Typedef Documentation

first_argument_type

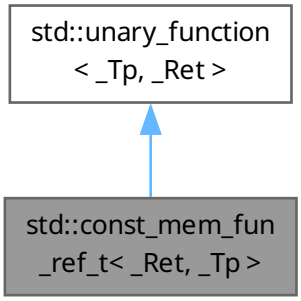
`typedef const _Tp * std::binary_function< const _Tp *, _Arg, _Ret >::first_argument_type [inherited]`
`first_argument_type` is the type of the first argument

result_type

`typedef _Ret std::binary_function< const _Tp *, _Arg, _Ret >::result_type [inherited]`
`result_type` is the return type

second_argument_type

```
typedef _Arg std::binary_function< const _Tp *, _Arg, _Ret >::second_argument_type [inherited]
```



second_argument_type is the type of the second argument
The documentation for this class was generated from the following file:

- stl_function.h

6.327 std::const_mem_fun_ref_t< _Ret, _Tp > Class Template Reference

```
#include <stl_function.h>
```

Inheritance diagram for std::const_mem_fun_ref_t< _Ret, _Tp >:

Public Types

- typedef _Tp argument_type
- typedef _Ret result_type

Public Member Functions

- **const_mem_fun_ref_t** (_Ret(_Tp::*__pf)() const)
- _Ret **operator()** (const _Tp &__r) const

6.327.1 Detailed Description

template<typename _Ret, typename _Tp>
class std::const_mem_fun_ref_t< _Ret, _Tp >

One of the adaptors for member pointers.

6.327.2 Member Typedef Documentation

argument_type

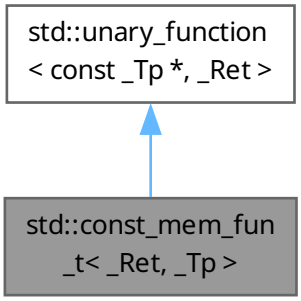
```
typedef _Tp std::unary_function< _Tp, _Ret >::argument_type [inherited]
```

argument_type is the type of the argument

result_type

```
typedef _Ret std::unary_function< _Tp, _Ret >::result_type  [inherited]
```

result_type is the return type



The documentation for this class was generated from the following file:

- stl_function.h

6.328 std::const_mem_fun_t< _Ret, _Tp > Class Template Reference

```
#include <stl_function.h>
```

Inheritance diagram for std::const_mem_fun_t< _Ret, _Tp >:

Public Types

- typedef const _Tp * argument_type
- typedef _Ret result_type

Public Member Functions

- **const_mem_fun_t** (_Ret(_Tp::*__pf)() const)
- _Ret **operator()** (const _Tp *__p) const

6.328.1 Detailed Description

template<typename _Ret, typename _Tp>
class std::const_mem_fun_t< _Ret, _Tp >

One of the adaptors for member pointers.

6.328.2 Member Typedef Documentation

argument_type

```
typedef const _Tp * std::unary_function< const _Tp *, _Ret >::argument_type  [inherited]
```

argument_type is the type of the argument

result_type

```
typedef _Ret std::unary_function< const _Tp *, _Ret >::result_type  [inherited]
```

result_type is the return type

The documentation for this class was generated from the following file:

- stl_function.h

6.329 __gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 > Struct Template Reference

```
#include <functional>
```

Public Types

- typedef _Arg1 **first_argument_type**
- typedef _Result **result_type**
- typedef _Arg2 **second_argument_type**

Public Member Functions

- **constant_binary_fun** (const _Result &__v)
- const result_type & **operator()** (const _Arg1 &, const _Arg2 &) const

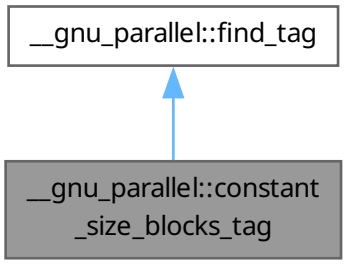
Public Attributes

- _Result **_M_val**

6.329.1 Detailed Description

template<class _Result, class _Arg1 = _Result, class _Arg2 = _Arg1>
struct __gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 >

An SGI extension .



The documentation for this struct was generated from the following file:

- ext/functional

6.330 __gnu_parallel::constant_size_blocks_tag Struct Reference

```
#include <tags.h>
```

Inheritance diagram for __gnu_parallel::constant_size_blocks_tag:

6.330.1 Detailed Description

Selects the constant block size variant for std::find().

See also

_GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS

The documentation for this struct was generated from the following file:

- tags.h

6.331 __gnu_cxx::constant_unary_fun< _Result, _Argument > Struct Template Reference

`#include <functional>`

Public Types

- typedef _Argument **argument_type**
- typedef _Result **result_type**

Public Member Functions

- **constant_unary_fun** (const _Result &__v)
- const result_type & **operator()** (const _Argument &) const

Public Attributes

- result_type **_M_val**

6.331.1 Detailed Description

template<class _Result, class _Argument = _Result>
struct __gnu_cxx::constant_unary_fun< _Result, _Argument >

An SGI extension .
The documentation for this struct was generated from the following file:

- ext/functional

6.332 __gnu_cxx::constant_void_fun< _Result > Struct Template Reference

`#include <functional>`

Public Types

- typedef _Result **result_type**

Public Member Functions

- **constant_void_fun** (const _Result &__v)
- const result_type & **operator()** () const

Public Attributes

- result_type **_M_val**

6.332.1 Detailed Description

template<class _Result>
struct __gnu_cxx::constant_void_fun< _Result >

An SGI extension .
The documentation for this struct was generated from the following file:

- ext/functional

6.333 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, Tag, Policy_Tl > Struct Template Reference

6.333.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Tag, typename Policy_Tl = null_type>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, Tag, Policy_Tl >

Dispatch mechanism, primary template for associative types.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

6.334 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type > Struct Template Reference

`#include <priority_queue_base_dispatch.hpp>`

Public Types

- typedef binary_heap< _VTp, Cmp_Fn, _Alloc > type

6.334.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>
struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type >

Specialization for binary_heap.

6.334.2 Member Typedef Documentation

type

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>
typedef binary_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp,
Cmp_Fn, _Alloc, binary_heap_tag, null_type >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

6.335 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type > Struct Template Reference

```
#include <priority_queue_base_dispatch.hpp>
```

Public Types

- typedef binomial_heap< _VTp, Cmp_Fn, _Alloc > type

6.335.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>
struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type >

Specialization for binomial_heap.

6.335.2 Member Typedef Documentation

type

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>
typedef binomial_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp,
Cmp_Fn, _Alloc, binomial_heap_tag, null_type >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

6.336 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type > Struct Template Reference

```
#include <priority_queue_base_dispatch.hpp>
```

Public Types

- typedef pairing_heap< _VTp, Cmp_Fn, _Alloc > type

6.336.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>
struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type >

Specialization for pairing_heap.

6.336.2 Member Typedef Documentation

type

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>
typedef pairing_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp,
Cmp_Fn, _Alloc, pairing_heap_tag, null_type >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

6.337 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type > Struct Template Reference

```
#include <priority_queue_base_dispatch.hpp>
```

Public Types

- typedef rc_binomial_heap< _VTp, Cmp_Fn, _Alloc > type

6.337.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>
struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type >

Specialization for rc_binary_heap.

6.337.2 Member Typedef Documentation

type

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>
typedef rc_binomial_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp,
Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

6.338 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type > Struct Template Reference

```
#include <priority_queue_base_dispatch.hpp>
```

Public Types

- typedef thin_heap< _VTp, Cmp_Fn, _Alloc > type

6.338.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>
struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type >

Specialization for thin_heap.

6.338.2 Member Typedef Documentation

type

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>
typedef thin_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_↩
Fn, _Alloc, thin_heap_tag, null_type >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

6.339 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_Tl > Struct Template Reference

```

```

Public Types

- typedef cc_ht_map< Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at2t > type

6.339.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_Tl >

Specialization collision-chaining hash map.

6.339.2 Member Typedef Documentation

type

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
typedef cc_ht_map<Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at2t> __gnu_pbds::detail::container_base_d
Key, Mapped, _Alloc, cc_hash_tag, Policy_Tl >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.340 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_Tl > Struct Template Reference

```
#include <container_base_dispatch.hpp>
```

Public Types

- typedef gp_ht_map< Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t > type

6.340.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_Tl >

Specialization general-probe hash map.

6.340.2 Member Typedef Documentation

type

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
typedef gp_ht_map<Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t> __gnu_pbds::detail::container_b
Key, Mapped, _Alloc, gp_hash_tag, Policy_Tl >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.341 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_Tl > Struct Template Reference

```
#include <container_base_dispatch.hpp>
```

Public Types

- typedef lu_map< Key, Mapped, at0t, _Alloc, at1t > type

6.341.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_Tl >

Specialization for list-update map.

6.341.2 Member Typedef Documentation

type

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
typedef lu_map<Key, Mapped, at0t, _Alloc, at1t> __gnu_pbds::detail::container_base_dispatch< Key,
Mapped, _Alloc, list_update_tag, Policy_Tl >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.342 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_Tl > Struct Template Reference

```
#include <container_base_dispatch.hpp>
```

Public Types

- typedef ov_tree_map< Key, Mapped, at0t, at1t, _Alloc > type

6.342.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_Tl >

Specialization ordered-vector tree map.

6.342.2 Member Typedef Documentation

type

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
typedef ov_tree_map<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch<
Key, Mapped, _Alloc, ov_tree_tag, Policy_Tl >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.343 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, pat_trie_tag, Policy_Tl > Struct Template Reference

```
#include <container_base_dispatch.hpp>
```

Public Types

- typedef pat_trie_map< Key, Mapped, at1t, _Alloc > **type**

6.343.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, pat_trie_tag, Policy_Tl >

Specialization for PATRICIA trie map.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.344 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, rb_tree_tag, Policy_Tl > Struct Template Reference

```
#include <container_base_dispatch.hpp>
```

Public Types

- typedef rb_tree_map< Key, Mapped, at0t, at1t, _Alloc > type

6.344.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, rb_tree_tag, Policy_Tl >

Specialization for R-B tree map.

6.344.2 Member Typedef Documentation

type

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
typedef rb_tree_map<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch<
Key, Mapped, _Alloc, rb_tree_tag, Policy_Tl >::type
```

Dispatched type.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.345 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, splay_tree_tag, Policy_Tl > Struct Template Reference

`#include <container_base_dispatch.hpp>`

Public Types

- typedef splay_tree_map< Key, Mapped, at0t, at1t, _Alloc > type

6.345.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, splay_tree_tag, Policy_Tl >

Specialization splay tree map.

6.345.2 Member Typedef Documentation

type

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>
typedef splay_tree_map<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch<
Key, Mapped, _Alloc, splay_tree_tag, Policy_Tl >::type
```

Dispatched type.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.346 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, cc_hash_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef gp_ht_set< Key, null_type, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t > type

6.347.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, gp_hash_tag, Policy_Tl >

Specialization general-probe hash set.

6.347.2 Member Typedef Documentation

type

```
template<typename Key, typename _Alloc, typename Policy_Tl>
typedef gp_ht_set<Key, null_type, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t> __gnu_pbds::detail::containe
Key, null_type, _Alloc, gp_hash_tag, Policy_Tl >::type
```

Dispatched type.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.348 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, list_update_tag, Policy_Tl > Struct Template Reference

`#include <container_base_dispatch.hpp>`

Public Types

- typedef lu_set< Key, null_type, at0t, _Alloc, at1t > type

6.348.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, list_update_tag, Policy_Tl >

Specialization for list-update set.

6.348.2 Member Typedef Documentation

type

```
template<typename Key, typename _Alloc, typename Policy_Tl>
typedef lu_set<Key, null_type, at0t, _Alloc, at1t> __gnu_pbds::detail::container_base_dispatch<
Key, null_type, _Alloc, list_update_tag, Policy_Tl >::type
```

Dispatched type.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.349 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, ov_tree_tag, Policy_Tl > Struct Template Reference

`#include <container_base_dispatch.hpp>`

Public Types

- typedef ov_tree_set< Key, null_type, at0t, at1t, _Alloc > type

6.349.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, ov_tree_tag, Policy_Tl >

Specialization ordered-vector tree set.

6.349.2 Member Typedef Documentation

type

```
template<typename Key, typename _Alloc, typename Policy_Tl>
typedef ov_tree_set<Key, null_type, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch<
Key, null_type, _Alloc, ov_tree_tag, Policy_Tl >::type
```

Dispatched type.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.350 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, pat_trie_tag, Policy_Tl > Struct Template Reference

`#include <container_base_dispatch.hpp>`

Public Types

- typedef pat_trie_set< Key, null_type, at1t, _Alloc > type

6.350.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, pat_trie_tag, Policy_Tl >

Specialization for PATRICIA trie set.

6.350.2 Member Typedef Documentation

type

```
template<typename Key, typename _Alloc, typename Policy_Tl>
typedef pat_trie_set<Key, null_type, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch<
Key, null_type, _Alloc, pat_trie_tag, Policy_Tl >::type
```

Dispatched type.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.351 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, rb_tree_tag, Policy_Tl > Struct Template Reference

`#include <container_base_dispatch.hpp>`

Public Types

- typedef rb_tree_set< Key, null_type, at0t, at1t, _Alloc > **type**

6.351.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, rb_tree_tag, Policy_Tl >

Specialization for R-B tree set.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.352 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, splay_tree_tag, Policy_Tl > Struct Template Reference

`#include <container_base_dispatch.hpp>`

Public Types

- typedef splay_tree_set< Key, null_type, at0t, at1t, _Alloc > type

6.352.1 Detailed Description

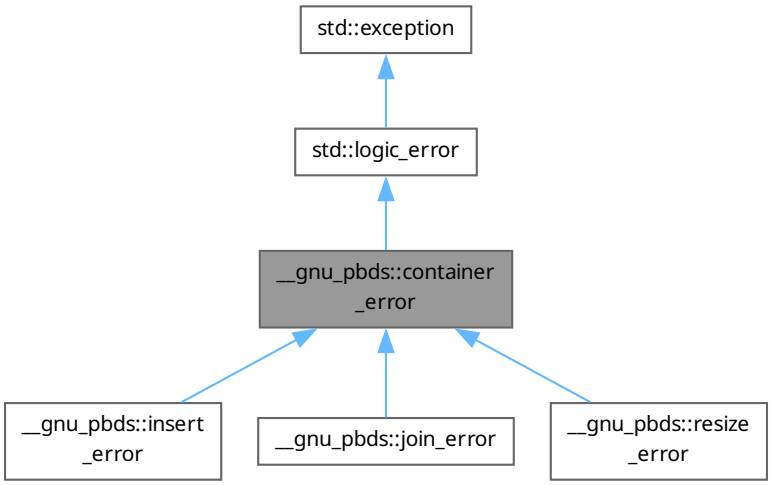
template<typename Key, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, splay_tree_tag, Policy_Tl >

Specialization splay tree set.

6.352.2 Member Typedef Documentation

type

```
template<typename Key, typename _Alloc, typename Policy_Tl>
typedef splay_tree_set<Key, null_type, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch<
Key, null_type, _Alloc, splay_tree_tag, Policy_Tl >::type
```



Dispatched type.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

6.353 __gnu_pbds::container_error Struct Reference

`#include <exception.hpp>`

Inheritance diagram for __gnu_pbds::container_error:

Public Member Functions

- virtual const char * what () const noexcept

6.353.1 Detailed Description

Base class for exceptions.

6.353.2 Member Function Documentation

what()

```
virtual const char * std::logic_error::what () const  [virtual], [noexcept], [inherited]
```

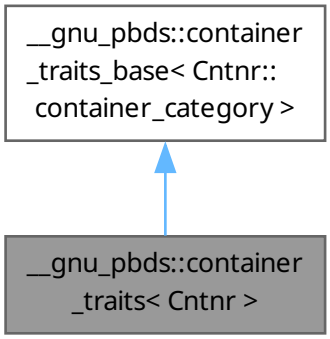
Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).
Reimplemented from std::exception.
Reimplemented in std::future_error.
References what().
Referenced by what().
The documentation for this struct was generated from the following file:

- exception.hpp

6.354 __gnu_pbds::container_tag Struct Reference

```
#include <tag_and_trait.hpp>
```

Inheritance diagram for __gnu_pbds::container_tag:



6.354.1 Detailed Description

Base data structure tag.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

6.355 __gnu_pbds::container_traits< Cntnr > Struct Template Reference

`#include <tag_and_trait.hpp>`
Inheritance diagram for __gnu_pbds::container_traits< Cntnr >:

Public Types

- enum { order_preserving , erase_can_throw , split_join_can_throw , reverse_iteration }
- typedef container_traits_base< container_category > **base_type**
- typedef Cntnr::container_category **container_category**
- typedef Cntnr **container_type**
- typedef base_type::invalidation_guarantee **invalidation_guarantee**

6.355.1 Detailed Description

template<typename Cntnr>
struct __gnu_pbds::container_traits< Cntnr >

Container traits.

6.355.2 Member Enumeration Documentation

anonymous enum

```
template<typename Cntnr>
anonymous enum
```

Enumerator

order_preserving	True only if Cntnr objects guarantee storing keys by order.
erase_can_throw	True only if erasing a key can throw.
split_join_can_throw	True only if split or join operations can throw.
reverse_iteration	True only reverse iterators are supported.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

6.356 __gnu_pbds::container_traits_base< _Tag > Struct Template Reference

6.356.1 Detailed Description

template<typename _Tag>
struct __gnu_pbds::container_traits_base< _Tag >

Primary template, container traits base.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

6.357 __gnu_pbds::container_traits_base< binary_heap_tag > Struct Reference

```
#include <tag_and_trait.hpp>
```

Public Types

6.370.1 Detailed Description

template<typename _Res, typename... _ArgTypes, bool _Noex>
class std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>

Polymorphic copyable function wrapper.

Since

C++26

The `std::copyable_function` class template is a call wrapper similar to `std::function`, but it does not provide information about it's target, and preserves constness.
It also supports const-qualification, ref-qualification, and no-throw guarantees. The qualifications and exception-specification of the `copyable_function::operator()` member function are respected when invoking the target function.

6.370.2 Constructor & Destructor Documentation

copyable_function() [1/7]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::copyable_function
() [inline], [noexcept]
```

Creates an empty object.
References copyable_function().
Referenced by copyable_function(), copyable_function(), copyable_function(), copyable_function(), copyable_function(), copyable_function(), copyable_function(), operator=(), operator=(), operator=(), operator=(), operator==, swap(), and swap.

copyable_function() [2/7]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::copyable_function (
            nullptr_t ) [inline], [noexcept]
```

Creates an empty object.
References copyable_function().

copyable_function() [3/7]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::copyable_function (
            copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> && __x)
[inline], [noexcept]
```

Moves the target object, leaving the source empty.
References copyable_function().

copyable_function() [4/7]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::copyable_function (
            copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> const & __x)
[inline]
```

Copies the target object.
References copyable_function().

copyable_function() [5/7]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
template<typename _Fn, typename _Vt = decay_t<_Fn>>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::copyable_function (
            _Fn && __f) [inline], [noexcept]
```

Stores a target object initialized from the argument.
References copyable_function(), and std::forward().

copyable_function() [6/7]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
template<typename _Tp, typename... _Args>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::copyable_function (
            in_place_type_t< _Tp > ,
            _Args &&... __args) [inline], [explicit], [noexcept]
```

Stores a target object initialized from the arguments.
References copyable_function(), and std::forward().

copyable_function() [7/7]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
template<typename _Tp, typename _Up, typename... _Args>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::copyable_function (
            in_place_type_t< _Tp > ,
            initializer_list< _Up > __il,
            _Args &&... __args) [inline], [explicit], [noexcept]
```

Stores a target object initialized from the arguments.
References copyable_function(), and std::forward().

6.370.3 Member Function Documentation

operator bool()

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::operator bool ()
const [inline], [explicit], [noexcept]
```

True if a target object is present, false otherwise.

operator()()

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
_Res std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::operator() (
            _ArgTypes... __args) [inline], [noexcept]
```

Invoke the target object.

The target object will be invoked using the supplied arguments, and as an lvalue or rvalue, and as const or non-const, as dictated by the template arguments of the `copyable_function` specialization.

Precondition

Must not be empty.

References std::forward(), and operator()().

Referenced by operator()().

operator=() [1/4]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
template<typename _Fn>
copyable_function & std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_↩
Noex)>::operator= (
            _Fn && __f) [inline], [noexcept]
```

Stores a new target object, initialized from the argument.

References copyable_function(), std::forward(), and operator=().

operator=() [2/4]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
copyable_function & std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_↩
Noex)>::operator= (
            const copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> & __x)
[inline]
```

Stores a copy of the source target object.

References copyable_function(), and operator=().

operator=() [3/4]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
copyable_function & std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_↩
Noex)>::operator= (
            copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> && __x)
[inline], [noexcept]
```

Stores a new target object, leaving `x` empty.

References copyable_function(), std::addressof(), and operator=().

Referenced by operator=(), operator=(), operator=(), and operator=().

operator=() [4/4]

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
copyable_function & std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_↩
Noex)>::operator= (
            nullptr_t ) [inline], [noexcept]
```

Destroys the target object (if any).
References copyable_function(), and operator=().

swap()

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
void std::copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)>::swap (
            copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> & __x) [inline],
[noexcept]
```

Exchange the target objects (if any).
References copyable_function(), and swap().
Referenced by swap(), and swap.

6.370.4 Friends And Related Symbol Documentation

operator==

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
bool operator== (
            const copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> & __x,
            nullptr_t ) [friend]
```

Check for emptiness by comparing with `nullptr`.
References copyable_function(), and operator==.
Referenced by operator==.

swap

```
template<typename _Res, typename... _ArgTypes, bool _Noex>
void swap (
            copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> & __x,
            copyable_function< _Res(_ArgTypes...) _GLIBCXX_MOF_CV noexcept(_Noex)> & __y) [friend]
```

Exchange the target objects (if any).
References copyable_function(), and swap().

6.372.1 Detailed Description

template<typename _CharT>
class std::ctype< _CharT >

Primary class template ctype facet.
This template class defines classification and conversion functions for character sets. It wraps cctype functionality. Ctype gets used by streams for many I/O operations.
This template provides the protected virtual functions the developer will have to replace in a derived class or specialization to make a working facet. The public functions that access them are defined in __ctype_abstract_base, to allow for implementation flexibility. See ctype<wchar_t> for an example. The functions are documented in __ctype_abstract_↩ base.
Note: implementations are provided for all the protected virtual functions, but will likely not be useful.

6.372.2 Member Function Documentation

do_is() [1/2]

```
template<typename _CharT>
virtual const char_type * std::ctype< _CharT >::do_is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec) const  [protected], [virtual]
```

Return a mask array.
This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

do_is() [2/2]

```
template<typename _CharT>
virtual bool std::ctype< _CharT >::do_is (
            mask __m,
            char_type __c) const  [protected], [virtual]
```

Test char_type classification.
This function finds a mask M for *c* and compares it to mask *m*.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__c	The char_type to find the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Implements std::__ctype_abstract_base< _CharT >.

do_narrow() [1/2]

```
template<typename _CharT>
virtual char std::ctype< _CharT >::do_narrow (
            char_type __c,
            char __dfault) const  [protected], [virtual]
```

Narrow char_type to char.
This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::narrow(), and std::ctype< char >::narrow().

do_narrow() [2/2]

```
template<typename _CharT>
virtual const char_type * std::ctype< _CharT >::do_narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to) const  [protected], [virtual]
```

Narrow char_type array to char.
This virtual function converts each char_type in the range [__lo,__hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *__dfault* is used instead.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

do_scan_is()

```
template<typename _CharT>
virtual const char_type * std::ctype< _CharT >::do_scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi) const  [protected], [virtual]
```

Find char_type matching mask.
This function searches for and returns the first char_type c in [__lo,__hi) for which is(__m,c) is true.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *__hi*.

Implements std::__ctype_abstract_base< _CharT >.

do_scan_not()

```
template<typename _CharT>
virtual const char_type * std::ctype< _CharT >::do_scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi) const  [protected], [virtual]
```

Find char_type not matching mask.
This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else *__hi*.

Implements std::__ctype_abstract_base< _CharT >.

do_tolower() [1/2]

```
template<typename _CharT>
virtual const char_type * std::ctype< _CharT >::do_tolower (
            char_type * __lo,
            const char_type * __hi) const  [protected], [virtual]
```

Convert array to lowercase.
This virtual function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

do_tolower() [2/2]

```
template<typename _CharT>
virtual char_type std::ctype< _CharT >::do_tolower (
            char_type __c) const  [protected], [virtual]
```

Convert to lowercase.
This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::tolower(), and std::ctype< char >::tolower().

do_toupper() [1/2]

```
template<typename _CharT>
virtual const char_type * std::ctype< _CharT >::do_toupper (
            char_type * __lo,
            const char_type * __hi) const  [protected], [virtual]
```

Convert array to uppercase.
This virtual function converts each char_type in the range [__lo,__hi) to uppercase if possible. Other elements remain untouched.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

do_toupper() [2/2]

```
template<typename _CharT>
virtual char_type std::ctype< _CharT >::do_toupper (
            char_type __c) const  [protected], [virtual]
```

Convert to uppercase.
This virtual function converts the char_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::toupper(), and std::ctype< char >::toupper().

do_widen() [1/2]

```
template<typename _CharT>
virtual char_type std::ctype< _CharT >::do_widen (
            char __c) const  [protected], [virtual]
```

Widen char.

This virtual function converts the char to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::widen(), and std::ctype< char >::widen().

do_widen() [2/2]

```
template<typename _CharT>
virtual const char * std::ctype< _CharT >::do_widen (
            const char * __lo,
            const char * __hi,
            char_type * __to) const  [protected], [virtual]
```

Widen char array.
This function converts each char in the input to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

is() [1/2]

```
template<typename _CharT>
const char_type * std::__ctype_abstract_base< _CharT >::is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec) const  [inline], [inherited]
```

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

is() [2/2]

```
template<typename _CharT>
bool std::__ctype_abstract_base< _CharT >::is (
            mask __m,
            char_type __c) const  [inline], [inherited]
```

Test char_type classification.
This function finds a mask M for *__c* and compares it to mask *__m*. It does so by returning the value of ctype<char_↩ type>::do_is().

Parameters

_↩ _c	The char_type to compare the mask of.
_↩ _m	The mask to compare against.

Returns

(M & __m) != 0.

Referenced by std::time_get< _CharT, _InIter >::get().

narrow() [1/2]

```
template<typename _CharT>
char std::__ctype_abstract_base< _CharT >::narrow (
            char_type __c,
            char __dfault) const  [inline], [inherited]
```

Narrow char_type to char.
This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(__c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Referenced by std::time_get< _CharT, _InIter >::do_get_year(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

narrow() [2/2]

```
template<typename _CharT>
const char_type * std::__ctype_abstract_base< _CharT >::narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to) const  [inline], [inherited]
```

Narrow array to char array.
This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

scan_is()

```
template<typename _CharT>
const char_type * std::__ctype_abstract_base< _CharT >::scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi) const  [inline], [inherited]
```

Find char_type matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to matching char_type if found, else __*hi*.

scan_not()

```
template<typename _CharT>
const char_type * std::__ctype_abstract_base< _CharT >::scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi) const  [inline], [inherited]
```

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to non-matching char if found, else __*hi*.

tolower() [1/2]

```
template<typename _CharT>
const char_type * std::__ctype_abstract_base< _CharT >::tolower (
            char_type * __lo,
            const char_type * __hi) const  [inline], [inherited]
```

Convert array to lowercase.

This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_tolower(__lo, __hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

tolower() [2/2]

```
template<typename _CharT>
char_type std::__ctype_abstract_base< _CharT >::tolower (
            char_type __c) const  [inline], [inherited]
```

Convert to lowercase.
This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

__c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Referenced by std::time_get< _CharT, _InIter >::get().

toupper() [1/2]

```
template<typename _CharT>
const char_type * std::__ctype_abstract_base< _CharT >::toupper (
            char_type * __lo,
            const char_type * __hi) const  [inline], [inherited]
```

Convert array to uppercase.
This function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_toupper(lo, hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

toupper() [2/2]

```
template<typename _CharT>
char_type std::__ctype_abstract_base< _CharT >::toupper (
            char_type __c) const  [inline], [inherited]
```

Convert to uppercase.
This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper().

Parameters

_↩ _c	The char_type to convert.

Returns

The uppercase char_type if convertible, else __c.

Referenced by std::time_get< _CharT, _InIter >::get().

widen() [1/2]

```
template<typename _CharT>
char_type std::__ctype_abstract_base< _CharT >::widen (
            char __c) const  [inline], [inherited]
```

Widen char to char_type.
This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::money_put< _CharT, _Out and std::time_put< _CharT, _OutIter >::do_put().

widen() [2/2]

```
template<typename _CharT>
const char * std::__ctype_abstract_base< _CharT >::widen (
            const char * __lo,
            const char * __hi,
            char_type * __to) const  [inline], [inherited]
```

Widen array to char_type.
This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

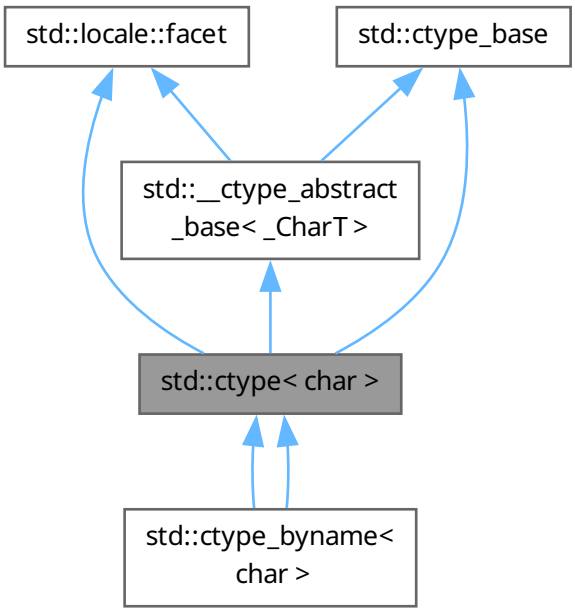
__hi.

6.372.3 Member Data Documentation

id

```
template<typename _CharT>
locale::id std::ctype< _CharT >::id  [static]
```

The facet id for ctype<char_type>.



The documentation for this class was generated from the following file:

- locale_facets.h

6.373 std::ctype< char > Class Reference

```
#include <locale_facets.h>
```

6.373.1 Detailed Description

The ctype<char> specialization.
This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.

6.373.2 Member Typedef Documentation

char_type

```
typedef char std::ctype< char >::char_type
```

Typedef for the template parameter char.

6.373.3 Constructor & Destructor Documentation

ctype() [1/2]

```
std::ctype< char >::ctype (
            const mask * __table = 0,
            bool __del = false,
            size_t __refs = 0)  [explicit]
```

Constructor performs initialization.
This is the constructor provided by the standard.

Parameters

__table	If non-zero, table is used as the per-char mask. Else classic_table() is used.
__del	If true, passes ownership of table to this facet.
__refs	Passed to the base facet class.

Referenced by ~ctype().

ctype() [2/2]

```
std::ctype< char >::ctype (
            __c_locale __cloc,
            const mask * __table = 0,
            bool __del = false,
            size_t __refs = 0)  [explicit]
```

Constructor performs static initialization.
This constructor is used to construct the initial C locale facet.

Parameters

__cloc	Handle to C locale data.
__table	If non-zero, table is used as the per-char mask.
__del	If true, passes ownership of table to this facet.
__refs	Passed to the base facet class.

~ctype()

```
virtual std::ctype< char >::~ctype ()  [protected], [virtual]
```

Destructor.
This function deletes table() if *del* was true in the constructor.
References ctype().

6.373.4 Member Function Documentation

classic_table()

```
const mask * std::ctype< char >::classic_table () throw ( )   [static]
```

Returns a pointer to the C locale mask table.

do_is() [1/3]

```
template<typename _CharT>
```

```
virtual const char_type * std::__ctype_abstract_base< _CharT >::do_is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec) const  [protected], [pure virtual], [inherited]
```

Return a mask array.
This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implemented in std::ctype< _CharT >, and std::mask< _CharT >.

do_is() [2/3]

```
template<typename _CharT>
virtual bool std::__ctype_abstract_base< _CharT >::do_is (
            mask __m,
            char_type __c) const  [protected], [pure virtual], [inherited]
```

Test char_type classification.
This function finds a mask M for *c* and compares it to mask *m*.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__c	The char_type to find the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Implemented in std::ctype< _CharT >, std::ctype< wchar_t >, and std::mask< _CharT >.
Referenced by std::mask< _CharT >::is(), and std::mask< _CharT >::is().

do_is() [3/3]

```
virtual bool std::ctype< char >::do_is (
            mask __m,
            char_type __c) const  [protected], [virtual]
```

Test char_type classification.
This function finds a mask M for *c* and compares it to mask *m*.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__c	The char_type to find the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

do_narrow() [1/4]

```
template<typename _CharT>
virtual char std::__ctype_abstract_base< _CharT >::do_narrow (
            char_type __c,
            char __dfault) const  [protected], [pure virtual], [inherited]
```

Narrow char_type to char.
This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.
